

Contents

1	Prerequisites from Probability Theory	1
2	A Poisson Limit Theorem for Triangular Arrays	23
3	The Method of Moments	35
4	A Central Limit Theorem for Stationary m-Dependent Sequences	47
5	The Multivariate Normal Distribution	57
6	Convergence in Distribution and Central Limit Theorem in $\mathbb{R}^d$	69
7	Empirical Distribution Function	95
8	Limit Theorems for U-Statistics	103
9	Basic Concepts of Estimation Theory	143
10	Maximum Likelihood Estimation	159
11	Asymptotic (Relative) Efficiency of Estimators	185
12	Likelihood Ratio Tests	203
13	Probability Measures on Metric Spaces	227
14	Convergence of Distributions in Metric Spaces	247
15	Wiener Process, Donsker's Theorem, and Brownian Bridge	271
16	The Space $D[0, 1]$, Empirical Processes	307
17	Random Elements in Separable Hilbert Spaces	343
	Afterword	387
	Solutions to the Problems	389
	Bibliography	453
	Index	459
