|-----|---------------------------------------------------------------------|-----|
| 1   | <b>Introduction: Classical Electrodynamics in Modern Times.....</b> | 1   |
| 1.1 | <b>Charge and Fields .....</b>                                      | 2   |
| 1.2 | <b>Some Results from Fundamental Research.....</b>                  | 3   |
| 1.3 | <b>The Basic Assumptions of Electrodynamics .....</b>               | 8   |
| 1.4 | <b>Problems .....</b>                                               | 10  |
| 1.5 | <b>Solutions .....</b>                                              | 11  |
|     | <b>References .....</b>                                             | 13  |
| 2   | <b>Charge and Current .....</b>                                     | 15  |
| 2.1 | <b>Current and the Conservation of Charge .....</b>                 | 16  |
| 2.2 | <b>Ohm's Law .....</b>                                              | 20  |
| 2.3 | <b>Problems .....</b>                                               | 25  |
| 2.4 | <b>Solutions .....</b>                                              | 27  |
|     | <b>References .....</b>                                             | 31  |
| 3   | <b>Maxwell's Equations .....</b>                                    | 33  |
| 3.1 | <b>Maxwell's Equations in Differential Form.....</b>                | 34  |
| 3.2 | <b>Fields in Matter .....</b>                                       | 35  |
| 3.3 | <b>The Integral Field Equations.....</b>                            | 45  |
| 3.4 | <b>Refraction of Field Lines.....</b>                               | 49  |
| 3.5 | <b>Problems .....</b>                                               | 51  |
| 3.6 | <b>Solutions .....</b>                                              | 53  |
|     | <b>References .....</b>                                             | 56  |
| 4   | <b>First Special Case: Static Electric Fields .....</b>             | 59  |
| 4.1 | <b>Energy and Potential .....</b>                                   | 60  |
| 4.2 | <b>Field Calculation Using Gauss and Coulomb Integrals .....</b>    | 67  |
| 4.3 | <b>The Equations of Laplace and Poisson .....</b>                   | 69  |
| 4.4 | <b>Calculating Potentials .....</b>                                 | 74  |
| 4.5 | <b>Electric Multipoles .....</b>                                    | 82  |
| 4.6 | <b>Capacitors .....</b>                                             | 93  |
| 4.7 | <b>Problems .....</b>                                               | 97  |
| 4.8 | <b>Solutions .....</b>                                              | 99  |
|     | <b>References .....</b>                                             | 104 |
