Abstract	i
Zusammenfassung	iii
Publications	v
1 Introduction	1
2 Theory of Spontaneous Parametric Down-Conversion	5
2.1 Theoretical Foundation	5
2.2 Theoretical Prerequisites	7
2.2.1 Pump Beam	7
2.2.2 Nonlinear Susceptibility	8
Frequency Dependence	10
Direction Dependence	11
2.2.3 Optics	11
Ray Transfer Matrix Analysis	12
Fresnel Equations	13
Diffraction Gratings	13
Lens Misalignment	14
2.3 Theoretical Results	14
3 Theory of Quantum Imaging and Sensing with Undetected Light	23
3.1 Theoretical Foundation	23
3.2 Theoretical Results	24
3.2.1 Convolution Method	28
3.2.2 Deconvolution of Detector Images	30
3.2.3 Quantum-Optical Coherence Tomography with Undetected Light	30
3.3 Theory of Numerical Methods	31
3.3.1 Quasi-Monte Carlo Integration	31
3.3.2 Deconvolution Algorithms	32
Richardson-Lucy Deconvolution	33
4 Methods	35
4.1 Experimental Setups	35
4.1.1 Visible-Terahertz Spectrum Setup	35
4.1.2 Mach-Zehnder-Geometry Quantum-Imaging Setups	40
4.1.3 Michelson-Geometry Quantum-Imaging Setup	43
4.1.4 Michelson-Geometry Quantum-Optical Coherence Tomography Setup	44
4.1.5 Summary of Experimental Parameters	45
4.1.6 General Approximation Details	45
4.2 Parameter Estimation	47

4.3	Implementation Details	49
4.3.1	Quasi-Monte Carlo Integration for Source Simulation	49
4.3.2	Converting Medium to Vacuum Properties	50
4.3.3	Integration for Detector Pixels	51
4.3.4	Binning Simulation Method	51
4.3.5	Concurrent Simulation for Imaging	52
4.3.6	Convolution Method	52
4.3.7	Resolution Limit for Imaging	52
4.3.8	Outlier Detection	53
4.3.9	Concurrent Simulation for Optical Coherence Tomography	53
5	Simulation Results	55
5.1	Simulation of Spontaneous Parametric Down-Conversion Sources	55
5.1.1	Preliminary Discussion of Spectra	55
5.1.2	Lithium Niobate Visible-Terahertz Spectrum	56
5.1.3	Lithium Niobate Visible-Infrared Spectrum	63
5.1.4	Potassium Titanyl Phosphate Visible-Infrared Spectrum	65
5.1.5	Potassium Titanyl Phosphate Visible-Visible Spectrum	68
5.2	Simulation of Quantum Imaging with Undetected Light	69
5.2.1	Mach-Zehnder-Geometry Quantum-Imaging Setups	69
	Convolution Approximation	72
	Deconvolution	72
	Phase Object	73
	Resolution Limit	75
	Misalignments	77
	Identification of Errors in Experimental Setups	79
5.3	Simulation of Quantum-Optical Coherence Tomography	81
5.4	Computation Times and Numerical Accuracy	87
5.4.1	Spontaneous Parametric Down-Conversion Source Simulation	87
5.4.2	Quantum Imaging with Undetected Light	90
5.4.3	Quantum-Optical Coherence Tomography with Undetected Light	91
6	Conclusion	93
6.1	Summary	93
6.2	Outlook	94
6.3	Conclusion	96
	Bibliography	97
	Acknowledgments	105
	Curriculum Vitae	107
