|----------|----------------------------------------------------------------------|-----------|
| <b>1</b> | <b>Introduction</b>                                                  | <b>1</b>  |
| 1.1      | Motivation . . . . .                                                 | 1         |
| 1.2      | Demand-side management . . . . .                                     | 2         |
| 1.3      | Continuous zeolite crystallization . . . . .                         | 3         |
| 1.3.1    | The continuous oscillatory baffled reactor . . . . .                 | 4         |
| 1.3.2    | Models for the zeolite crystallization . . . . .                     | 4         |
| 1.4      | Control of tubular reactors . . . . .                                | 5         |
| 1.4.1    | Plant operation under plant-model mismatch . . . . .                 | 5         |
| 1.4.2    | State estimation . . . . .                                           | 6         |
| 1.5      | Structure of this thesis . . . . .                                   | 7         |
| <b>2</b> | <b>Case studies</b>                                                  | <b>9</b>  |
| 2.1      | Pilot-scale case study . . . . .                                     | 9         |
| 2.1.1    | Process . . . . .                                                    | 9         |
| 2.1.2    | Dynamic model . . . . .                                              | 10        |
| 2.1.3    | Model validation . . . . .                                           | 20        |
| 2.2      | Industrial-scale case study . . . . .                                | 26        |
| 2.2.1    | Process . . . . .                                                    | 27        |
| 2.2.2    | Rigorous process model . . . . .                                     | 28        |
| 2.3      | Conclusion . . . . .                                                 | 29        |
| <b>3</b> | <b>Plant-model mismatch</b>                                          | <b>31</b> |
| 3.1      | Methodology . . . . .                                                | 31        |
| 3.1.1    | Stochastic differential equations . . . . .                          | 31        |
| 3.1.2    | Linear Gaussian SDEs . . . . .                                       | 32        |
| 3.1.3    | Parametric noise . . . . .                                           | 32        |
| 3.1.4    | Numerical solution of SDEs . . . . .                                 | 33        |
| 3.1.5    | The unscented transform . . . . .                                    | 34        |
| 3.1.6    | Using sigma points to capture plant-model mismatch . . . . .         | 35        |
| 3.2      | Pilot-scale reactor . . . . .                                        | 37        |
| 3.2.1    | Properties of the parametric variation . . . . .                     | 37        |
| 3.2.2    | Quantification of the plant-model mismatch at steady state . . . . . | 38        |
| 3.2.3    | Validation in dynamic simulations . . . . .                          | 40        |
| 3.3      | Industrial-scale reactor . . . . .                                   | 41        |

|          |                                                                        |           |
|----------|------------------------------------------------------------------------|-----------|
| 3.3.1    | Properties of the parametric variation . . . . .                       | 41        |
| 3.3.2    | Evaluation of plant-model mismatch . . . . .                           | 42        |
| 3.4      | Conclusion . . . . .                                                   | 42        |
| <b>4</b> | <b>Optimal process operation</b>                                       | <b>45</b> |
| 4.1      | Steady-state optimization of the industrial process . . . . .          | 45        |
| 4.1.1    | Nominal optimization . . . . .                                         | 46        |
| 4.1.2    | Robustification of the optimal operation . . . . .                     | 48        |
| 4.2      | Robust optimization of the operation of the pilot scale COBR . . . . . | 51        |
| 4.2.1    | Problem statement . . . . .                                            | 51        |
| 4.2.2    | Implementation . . . . .                                               | 52        |
| 4.2.3    | Optimization results . . . . .                                         | 52        |
| 4.2.4    | Evaluation of the probability of constraint violation . . . . .        | 54        |
| 4.2.5    | Application to the real process . . . . .                              | 56        |
| 4.3      | Conclusion . . . . .                                                   | 59        |
| <b>5</b> | <b>Steady-state demand-side management</b>                             | <b>61</b> |
| 5.1      | Industrial process . . . . .                                           | 61        |
| 5.1.1    | Plant economics . . . . .                                              | 61        |
| 5.1.2    | Energy price based optimization . . . . .                              | 62        |
| 5.1.3    | Demand side management . . . . .                                       | 64        |
