Preface	<i>xi</i>		
Acknowledgments	<i>xiii</i>		
About the Companion Website	<i>xv</i>		
1 Introduction	1		
1.1 The Basics of Molecular Medicine	2		
1.1.1 Topics of Molecular Medicine	2		
1.1.2 Stages of Drug Development	3		
1.2 The Human Cell	4		
1.2.1 Organelles	5		
1.2.1.1 The Nucleus	5		
1.2.1.2 Mitochondria	6		
1.2.1.3 Endoplasmic Reticulum and Golgi Apparatus	7		
1.2.1.4 Peroxisome and Lysosome	8		
1.2.2 Cell Cycle	8		
1.2.3 Apoptosis	9		
1.3 DNA Replication and Gene Expression	10		
1.3.1 DNA Replication	11		
1.3.2 Mutations	13		
1.3.3 Transcription	14		
1.3.4 Epigenetic Regulation of Gene Expression	19		
1.3.5 Translation	22		
1.3.6 Protein Degradation	25		
1.4 Biological Communication	26		
1.4.1 Neurotransmitters	26		
1.4.2 Hormones	28		
1.4.3 Signal Transduction	28		
1.5 The Immune System	31		
1.5.1 The Innate Immune System	32		
1.5.1.1 The Complement System	33		
1.5.2 The Adaptive Immune System	34		
1.5.2.1 Cellular Immunity	34		
1.5.2.2 Humoral Immunity	35		
References	37		
2 Methods in Molecular Medicine	41		
2.1 DNA Microarrays	42		
2.2 Quantitative Polymerase Chain Reaction	45		
2.2.1 Basic Principles of Conventional PCR and Reverse-transcription PCR	46		
2.2.2 Basic Principle of Real-time PCR	47		
2.2.3 Reporter Dyes and Fluorescent Reporter Probes	48		
2.3 Next-generation Sequencing	51		
2.3.1 Second-generation Sequencing	52		
2.3.2 Third-generation Sequencing	55		
2.3.3 Exome Sequencing	56		
2.3.4 RNA-Seq and Single-cell Sequencing	57		
2.4 Proteomics	58		
2.4.1 Two-dimensional Gel Electrophoresis and Mass Spectrometry	59		
2.4.2 Quantitative and Shotgun Proteomics	62		
2.4.3 Elucidation of Protein Structures	64		
2.5 Animal Models in Biomedical Research	65		
2.6 Alternatives to Animal Testing	68		
2.6.1 3D Cell Culture, Spheroids, and Organoids	69		
2.6.2 Bioprinting	70		
2.6.3 Organ-on-a-Chip	72		
2.6.4 Replacement of Animal Components in Biomedical Research	73		
2.7 Additional Methods	74		
2.7.1 Fluorescence Microscopy	74		
2.7.2 Flow Cytometry and Fluorescence-activated Cell Sorting	76		
2.7.3 Surface Plasmon Resonance	76		
References	77		
3 Genetic Disorders	81		
3.1 Single-gene Disorders	82		
3.1.1 Autosomal Dominant Disorders	85		
3.1.1.1 Familial Hypercholesterolemia	85		
3.1.1.2 Polycystic Kidney Disease	87		
3.1.1.3 Marfan's Syndrome	88		
3.1.1.4 Huntington's Disease	88		
3.1.2 Autosomal Recessive Disorders	90		
3.1.2.1 Cystic Fibrosis	90		
3.1.2.2 Tay-Sachs Disease	92		
3.1.2.3 Phenylketonuria	93		
3.1.2.4 Xeroderma Pigmentosum	95		
3.1.3 X-linked Recessive Disorders	96		

3.1.3.1	Red–Green Color Blindness	96	5.3.5	Indirect ELISA	160
3.1.3.2	Duchenne and Becker Muscular Dystrophy	97	5.3.6	Rapid Antigen Test	160
3.1.4	Mitochondriopathies	98	5.3.7	Polymerase Chain Reaction	161
3.2	Polygenic Disorders	101	5.3.8	Next-generation Sequencing	162
3.2.1	Asthma	102	5.3.9	Antiviral Susceptibility Testing	163
3.2.2	Diabetes Mellitus	103	5.4	Antiviral Therapy	163
	References	105	5.4.1	Human Immunodeficiency Virus	167
4	Molecular Oncology	109	5.4.2	Hepatitis C Virus	170
4.1	Basics of Oncology	110	5.4.3	Influenza Virus	171
4.1.1	Oncogenes and Tumor Suppressor Genes	110	5.4.4	Other Viruses	172
4.1.2	Hallmarks of Cancer	111	5.5	Prions	172
4.1.3	Treatment Options for Cancer	111		References	173
4.2	Selected Cancer Diseases	112	6	Bacteria and Eukaryotic Pathogens	177
4.2.1	Breast Cancer	112	6.1	Bacteria	178
4.2.2	Lung Cancer	114	6.1.1	Virulence Factors	180
4.2.3	Hepatocellular Carcinoma	116	6.1.2	Serotypes	182
4.2.4	Colorectal Cancer	117	6.1.3	Examples of Bacterial Diseases	182
4.2.5	Prostate Cancer	120	6.1.3.1	Tuberculosis	182
4.2.6	Hematological Malignancies	123	6.1.3.2	Pneumonia	183
4.2.6.1	Leukemia	124	6.1.3.3	Cholera	184
4.2.6.2	Further Hematological Malignancies	126	6.1.4	Biofilms	184
4.3	Oncolytic Virus Therapy	127	6.1.5	Bacterial Vaccines, Diagnostic Methods, and Antibiotics	184
4.4	Cancer Stem Cells	128	6.1.5.1	Vaccines	184
4.5	Cancer Immunotherapy	130	6.1.5.2	Diagnostic Methods	185
4.5.1	CAR-T Cell Therapy	130	6.1.5.3	Antibiotics	186
4.5.2	Immune Checkpoint Inhibitors	132	6.2	Eukaryotic Pathogens	192
4.5.3	mRNA Cancer Vaccines	134	6.2.1	Fungi	192
	References	135	6.2.2	Protozoan Parasites	193
5	Molecular Virology	139	6.2.2.1	<i>Plasmodium falciparum</i> (Malaria)	193
5.1	The Basics of Virology	140	6.2.3	Metazoan Parasites	195
5.1.1	Human Immunodeficiency Virus	143		References	196
5.1.2	Severe Acute Respiratory Syndrome Coronavirus 2	146	7	Genomics	199
5.1.3	Hepatitis B Virus	147	7.1	Whole Genome Sequencing	200
5.1.4	Influenza Virus	148	7.1.1	Cloning of DNA	200
5.2	Vaccination	149	7.1.2	Sequencing of Genomes	200
5.2.1	Live Vaccines	151	7.2	The Human Genome	202
5.2.1.1	Attenuated Virus Vaccines	151	7.2.1	Sequencing of the Human Genome	202
5.2.1.2	Recombinant Virus Vaccines	154	7.2.2	Interpretation of the Human Genome	204
5.2.2	Nonliving Vaccines	154	7.2.3	Sequencing of Individual Human Genomes	208
5.2.2.1	Inactivated Virus Vaccines	154	7.3	Sequencing of Ancient DNA	209
5.2.2.2	Subunit Vaccines	155	7.3.1	The Neanderthal Genome Project	209
5.2.2.3	DNA Vaccines	156	7.4	Follow-up Initiatives of the Human Genome Project	211
5.2.2.4	mRNA Vaccines	156	7.4.1	The International HapMap Project	211
5.2.3	HIV Vaccines	159	7.4.2	The 1000 Genomes Project and the Personal Genome Project	212
5.3	Detection of Viruses	159	7.4.3	Encyclopedia of DNA Elements (ENCODE)	212
5.3.1	Cytopathic Effects	159	7.4.4	Further Genomic Projects	214
5.3.2	Electron Microscopy	159		References	216
5.3.3	Hemagglutination Assay	160			
5.3.4	Enzyme-linked Immunosorbent Assay	160			

8	Genetic Testing	219	11.3	Tissue Specificity of Gene Transfer and Gene Expression	297
8.1	Types of Genetic Tests	220	11.4	Applications of Gene Therapy	300
8.1.1	Postnatal Genetic Tests	220	11.4.1	Gene Therapy of Monogenic Diseases	300
8.1.2	Prenatal Genetic Tests	222	11.4.2	Gene Therapy of Cancer	303
8.2	Chromosome Abnormalities	224	11.4.3	Other Diseases	305
8.2.1	Conventional Karyotyping	225	11.5	Genome Editing with CRISPR/Cas	305
8.2.2	Fluorescence In Situ Hybridization	225	11.6	Future Prospects	309
8.2.3	Comparative Genomic Hybridization	228		References	309
8.2.4	Optical Genome Mapping	229			
8.3	Molecular Diagnosis	229	12	Stem Cells	313
8.3.1	PCR-based Methods	229	12.1	Embryonic Stem Cells	315
8.3.2	DNA Microarray-based Methods	232	12.1.1	Generation and Properties of Embryonic Stem Cells	315
8.3.3	DNA Sequencing	234	12.1.2	Therapeutic Cloning	317
	References	236	12.2	Adult Stem Cells	318
9	Pharmacogenetics/Pharmacogenomics	239	12.3	Induced Pluripotent Stem Cells	320
9.1	Uptake and Transport of Drugs	242	12.3.1	Generation of Induced Pluripotent Stem Cells	320
9.2	Drug Metabolism	242	12.3.2	Properties of Induced Pluripotent Stem Cells	323
9.2.1	Cytochrome P450 Enzymes	243	12.4	Transdifferentiation and Direct Reprogramming	323
9.2.2	Other Drug-metabolizing Enzymes	246	12.5	Differentiation of Stem Cells	325
9.3	Drug Targeting	247	12.6	Medical Applications of Stem Cells	328
9.4	Drug Toxicity and Hypersensitivity	250	12.6.1	Adult Stem Cell Therapies	328
9.5	Drug Development and Individual Pharmacotherapy	250	12.6.2	Pluripotent Stem Cells for Biomedical Research	330
	References	252	12.6.3	Therapeutic Applications of Pluripotent Stem Cells	333
10	Recombinant Protein Drugs	255	12.6.3.1	Applications in the Central Nervous System	334
10.1	Production of Recombinant Proteins	258	12.6.3.2	Applications in the Eye	335
10.1.1	Bacteria	259	12.6.3.3	Diabetes	335
10.1.2	Yeast and Other Fungi	260	12.6.3.4	Heart Disease	336
10.1.3	Insect Cells	261	12.6.3.5	Combinations of Stem Cell and Gene Therapy	337
10.1.4	Mammalian Cells	261		References	338
10.1.5	Transgenic Animals and Plants	262	13	Oligonucleotide-based Strategies	341
10.2	Classes of Recombinant Drugs	264	13.1	Antisense Oligonucleotides (ASOs) and Ribozymes	343
10.2.1	Monoclonal Antibodies	265	13.1.1	Mechanism of Action of ASOs	344
10.2.2	Hormones	272	13.1.2	Development and Stabilization of ASO	345
10.2.3	Growth Factors	275	13.1.3	Clinical Applications of ASO	347
10.2.4	Fusion Proteins	277	13.1.4	Ribozymes	350
10.2.5	Cytokines	278	13.2	RNA Interference	351
10.2.6	Blood Coagulation Factors: Anticoagulants and Thrombolytics	279	13.2.1	Mechanism of RNAi	352
10.2.7	Therapeutic Enzymes	281	13.2.2	Nonspecific Side Effects	355
10.2.8	Recombinant Vaccines	282	13.2.3	Stabilization and Delivery	356
	References	283	13.2.4	Research and Preclinical Applications of RNAi	357
11	Gene Therapy	287	13.2.5	Clinical Applications of RNAi	358
11.1	Types of Gene Therapy	288	13.3	MicroRNAs	361
11.2	Methods of Gene Transfer	289			
11.2.1	Retroviral Vectors	290			
11.2.2	Adenoviral Vectors	292			
11.2.3	Adeno-associated Virus Vectors	293			
11.2.4	Nonviral Gene Transfer	295			

13.3.1	The Biology of MicroRNAs	361	14	Ethics in Molecular Medicine	383
13.3.2	MicroRNAs and Disease	363	14.1	The Basis of Bioethics	384
13.3.3	MicroRNA-Based Drugs in Clinical Development	366	14.2	Fields of Application	386
13.4	Aptamers, Decoy Oligonucleotides, and Immunostimulatory Oligonucleotides	367	14.2.1	Genetic Testing and the “Right Not to Know”	386
13.4.1	Aptamers	368	14.2.2	Stem Cell Research	388
13.4.1.1	Selection of Aptamers	368	14.2.3	Preimplantation Genetic Diagnosis	390
13.4.1.2	Modifications of Aptamers	371	14.2.4	Animal Experimentation	393
13.4.1.3	Clinical Development of Aptamers	373		Abbreviations	399
13.4.2	Decoy Oligonucleotides	375		Glossary	405
13.4.3	Immunostimulatory Oligonucleotides	376		Index	409
	References	377
