

CONTENTS

1	INTRODUCTION	1
1.1	Context and Motivation	1
1.2	Research Goal and Structure of this Thesis	3
2	FREQUENCY DYNAMICS OF POWER SYSTEMS	5
2.1	Fundamentals of Power System Frequency Dynamics	5
2.2	Concept of Virtual Inertia	10
2.3	Regulations and Markets	12
2.4	Challenges of Virtual Inertia Provision	14
2.4.1	Framework for Virtual Inertia Provision from Distribution Grids	14
2.4.2	Estimation of System Inertia	14
2.4.3	Coordination of Virtual Inertia	18
2.4.4	Research Questions	21
3	PHYSICS-INFORMED MACHINE LEARNING	23
3.1	Fundamentals of Physics-Informed Machine Learning	28
3.2	Fundamentals of Reinforcement Learning	31
3.3	Fundamentals of Physics-informed Reinforcement Learning	37
4	INERTIA SUPPORT FRAMEWORK	39
4.1	Ancillary Service Virtual Inertia	42
4.2	Communication Structure of the Framework	44
4.3	Benchmark Power System Models	46
4.3.1	Experimental Setup	46
4.3.2	Inverter model	47
4.3.3	Virtual Inertia Model	50
4.3.4	Synchronous Generator Model	51
4.3.5	Network Model	51
4.3.6	SIME Evaluation	52
4.3.7	COFIP Evaluation	52
5	ESTIMATION OF SYSTEM INERTIA	55
5.1	Methodology of Bayesian Physics-informed Neural Networks	55
5.1.1	Function Uncertainty Approximation	55
5.1.2	Variational Inference	60
5.1.3	Priors for Bayesian Physics-informed Neural Network	65

5.2	Bayesian Physics-informed Neural Networks for Robust Inertia Estimation under Aleatoric Uncertainty	66
5.2.1	Problem Formulation	67
5.2.2	Results	69
5.2.3	Conclusion	75
5.3	Bayesian Physics-informed Neural Networks for Inertia Estimation under Epistemic Uncertainty	76
5.3.1	Problem Formulation	77
5.3.2	Results Inertia Estimation	78
5.3.3	Results Transfer Learning	81
5.3.4	Conclusion	86
5.4	Discussion of the Results	86
5.5	Conclusion	87
6	COORDINATION OF VIRTUAL INERTIA PROVISION	89
6.1	Coordination of Virtual Inertia in Distribution Systems	89
6.2	Methodology of the Physics-informed Actor-Critic	93
6.2.1	Deep Deterministic Policy Gradient Algorithm	96
6.2.2	Penalty and Barrier Methods	98
6.2.3	Fundamentals of the Genetic Algorithm	101
6.2.4	Sensitivity of the Environment to Various IBR Parameters	101
6.3	Physics-informed Actor-Critic for Virtual Inertia Coordination in Distribution Systems	102
6.3.1	Results	104
6.3.2	Comparison of PI-AC and AC	110
6.3.3	Comparison of PI-AC and GA	111
6.3.4	Influence of the Weighting Factor Φ	113
6.3.5	Comparison of Runtimes	114
6.4	Discussion of the Results	116
6.5	Conclusion	119
7	DISCUSSION	121
7.1	Discussion of the Inertia Support Framework (RQ1)	121
7.2	Discussion of System Inertia Estimation (RQ2)	123
7.3	Discussion of Virtual Inertia Coordination (RQ3)	124
7.4	Trust in ML Algorithms in Power Systems	125
8	CONCLUSIONS AND OUTLOOK	129
A	APPENDIX	133
A.1	Appendix for chapter 3: Fundamentals of Physics-informed Machine Learning	133
A.2	Appendix for chapter 4: Inertia support framework	136
A.2.1	Generator and System Parameters	136
A.2.2	Inverter Parameters	136

A.3	Appendix for chapter 5: Estimation of System Inertia	139
A.3.1	Additional Information on Stein’s Discrepancy	140
A.3.2	SINDy Parameters	140
A.4	Appendix for chapter 6: Coordination of Virtual Inertia Provision	141
A.4.1	Comparison to Fixed Parameter Setting	141
A.4.2	Influence of Physics-informed Regularization to Random Regularization	142
A.4.3	Genetic Algorithm: Additional Results and Information	143
BIBLIOGRAPHY		145
