## Computing and Information Technology Algorithms and Applications

|                                                                                                                                                       |    |
|-------------------------------------------------------------------------------------------------------------------------------------------------------|----|
| <b>Analysis, Control and Synchronization of Hyperchaotic Zhou System via Adaptive Control</b> . . . . .                                               | 1  |
| <i>Sundarapandian Vaidyanathan</i>                                                                                                                    |    |
| <b>Secured Ontology Matching Using Graph Matching</b> . . . . .                                                                                       | 11 |
| <i>K. Manjula Shenoy, K.C. Shet, U. Dinesh Acharya</i>                                                                                                |    |
| <b>Image Restoration Using Knowledge from the Image</b> . . . . .                                                                                     | 19 |
| <i>S. Padmavathi, K.P. Soman, R. Aarthi</i>                                                                                                           |    |
| <b>Harmony-Based Feature Weighting to Improve the Nearest Neighbor Classification</b> . . . . .                                                       | 27 |
| <i>Ali Adeli, Mehrnoosh Sinaee, M. Javad Zomorodian, Ali Hamzeh</i>                                                                                   |    |
| <b>Effectiveness of Different Partition Based Clustering Algorithms for Estimation of Missing Values in Microarray Gene Expression Data</b> . . . . . | 37 |
| <i>Shilpi Bose, Chandra Das, Abirlal Chakraborty, Samiran Chattopadhyay</i>                                                                           |    |
| <b>MACREE – A Modern Approach for Classification and Recognition of Earthquakes and Explosions</b> . . . . .                                          | 49 |
| <i>K. Vijay Krishnan, S. Vignesh, G. Vijayraghavan</i>                                                                                                |    |
| <b>Building Concept System from the Perspective of Development of the Concept</b> . . . . .                                                           | 57 |
| <i>Cheng Xian-yi, Shen Xue-hua, Shi Quan</i>                                                                                                          |    |
| <b>E-Government Adoption: A Conceptual Demarcation</b> . . . . .                                                                                      | 67 |
| <i>Rahmath Safeena, Abdullah Kammani</i>                                                                                                              |    |

|                                                                                                                                      |     |
|--------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>Expert Webest Tool: A Web Based Application, Estimate the Cost and Risk of Software Project Using Function Points</b> .....       | 77  |
| <i>Ajay Jaiswal, Meena Sharma</i>                                                                                                    |     |
| <b>A Web-Based Adaptive and Intelligent Tutor by Expert Systems</b> .....                                                            | 87  |
| <i>Hossein Movafegh Ghadirli, Maryam Rastgarpour</i>                                                                                 |     |
| <b>Traffic Light Synchronization</b> .....                                                                                           | 97  |
| <i>K. Sankara Nayaki, N.U. Nithin Krishnan, Vivek Joby, R. Sreelakshmi</i>                                                           |     |
| <b>Partition Sort versus Quick Sort: A Comparative Average Case Analysis with Special Emphasis on Parameterized Complexity</b> ..... | 107 |
| <i>Niraj Kumar Singh, Soubhik Chakraborty</i>                                                                                        |     |
| <b>Removal of Inconsistent Training Data in Electronic Nose Using Rough Set</b> .....                                                | 115 |
| <i>Anil Kumar Bag, Bipan Tudu, Nabarun Bhattacharyya, Rajib Bandyopadhyay</i>                                                        |     |
| <b>A Decentralised Routing Algorithm for Time Critical Applications Using Wireless Sensor Networks</b> .....                         | 125 |
| <i>R.A. Roseline, P. Sumathi</i>                                                                                                     |     |
| <b>Application Security in Mobile Devices Using Unified Communications</b> ....                                                      | 135 |
| <i>Ramakrishna Josyula</i>                                                                                                           |     |
| <b>Iterative Image Fusion Using Fuzzy Logic with Applications</b> .....                                                              | 145 |
| <i>Srinivasa Rao Dammavalam, Seetha Maddala, M.H.M. Krishna Prasad</i>                                                               |     |
| <b>A Review on Clustering of Web Search Result</b> .....                                                                             | 153 |
| <i>Mansaf Alam, Kishwar Sadaf</i>                                                                                                    |     |
| <b>Application of Information Theory for Understanding of HLA Gene Regulation in Leukemia</b> .....                                  | 161 |
| <i>Durjoy Majumder</i>                                                                                                               |     |
| <b>Improving Security in Digital Images through Watermarking Using Enhanced Histogram Modification</b> .....                         | 175 |
| <i>Vidya Hari, A. Neela Madheswari</i>                                                                                               |     |
| <b>Survey on Co-operative P2P Information Exchange in Large P2P Networks</b> .....                                                   | 181 |
| <i>S. Nithya, K. Palanivel</i>                                                                                                       |     |
| <b>SNetRS: Social Networking in Recommendation System</b> .....                                                                      | 195 |
| <i>Jyoti Pareek, Maitri Jhaveri, Abbas Kapasi, Malhar Trivedi</i>                                                                    |     |
| <b>Linguistic Conversion of Syntactic to Semantic Web Page</b> .....                                                                 | 207 |
| <i>G. Nagarajan, K.K. Thyagarajan</i>                                                                                                |     |

|                                                                                                                                                                            |     |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>Two-Stage Rejection Algorithm to Reduce Search Space for Character Recognition in OCR</b> .....                                                                         | 215 |
| <i>Srivardhini Mandipati, Gottumukkala Asisha, S. Preethi Raj, S. Chitrakala</i>                                                                                           |     |
| <b>Transforming Election Polling from Electronic Voting to Cloud as a Software Service in India</b> .....                                                                  | 225 |
| <i>P. Vidhya</i>                                                                                                                                                           |     |
| <b>Area Efficient Architecture for Frequency Domain Multi Channel Digital Down Conversion for Randomly Spaced Signals</b> .....                                            | 233 |
| <i>Latha Sahukar, M. Madhavi Latha</i>                                                                                                                                     |     |
| <b>New Distances for Improving Progressive Alignment Algorithm</b> .....                                                                                                   | 243 |
| <i>Ahmed Mokaddem, Mourad Elloumi</i>                                                                                                                                      |     |
| <b>Service-Oriented Architecture (SOA) and Semantic Web Services for Web Portal Integration</b> .....                                                                      | 253 |
| <i>T.G.K. Vasista, Mohammed A.T. AlSudairi</i>                                                                                                                             |     |
| <b>Evolutionary Multi-Objective Optimization for Data-Flow Testing of Object-Oriented Programs</b> .....                                                                   | 263 |
| <i>P. Maragathavalli, S. Kanmani</i>                                                                                                                                       |     |
| <b>The Simulation of the Assembling Production Process</b> .....                                                                                                           | 273 |
| <i>Róbert Pauliček, Tomáš Haluška, Pavel Važan</i>                                                                                                                         |     |
| <b>Parallel Performance of Numerical Algorithms on Multi-core System Using OpenMP</b> .....                                                                                | 279 |
| <i>Sanjay Kumar Sharma, Kusum Gupta</i>                                                                                                                                    |     |
| <b>Efficiency Improvement of a-Si:H/<math>\mu</math>c-Si:H Tandem Solar Cells by Adding a-SiO<sub>x</sub>:H Layer between Ag Nano Particles and the Active Layer</b> ..... | 289 |
| <i>Ozcan Abdulkadir, Dhinaharan Nagamalai</i>                                                                                                                              |     |
| <b>Unsupervised Hidden Topic Framework for Extracting Keywords (Synonym, Homonym, Hyponymy and Polysemy) and Topics in Meeting Transcripts</b> .....                       | 299 |
| <i>J.I. Sheeba, K. Vivekanandan, G. Sabitha, P. Padmavathi</i>                                                                                                             |     |
| <b>Comprehensive Study of Estimation of Path Duration in Vehicular Ad Hoc Network</b> .....                                                                                | 309 |
| <i>R.S. Raw, Vikas Toor, N. Singh</i>                                                                                                                                      |     |
| <b>Securing DICOM Format Image Archives Using Improved Chaotic Cat Map Method</b> .....                                                                                    | 319 |
| <i>M. Arun Fera, Suresh Jaganathan</i>                                                                                                                                     |     |

|                                                                                                                                                       |     |
|-------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>Brain Tumor Segmentation Using Genetic Algorithm and Artificial Neural Network Fuzzy Inference System (ANFIS)</b> .....                            | 329 |
