Preface *xiii*

1	Organocatalyzed Ring-Opening Polymerization of Cyclic Esters Toward Degradable Polymers	1
	<i>Feng Li, Takuya Isono, and Toshifumi Satoh</i>	
1.1	General Introduction	1
1.2	Polymerization Mechanism	3
1.2.1	Nucleophilic Catalysts	3
1.2.2	Base Catalysts	4
1.2.3	Acid Catalysts	6
1.2.4	Ionic Catalysts	7
1.2.5	Bifunctional and Multifunctional Catalysts	9
1.3	Recent Trends in Organocatalyst Development	10
1.3.1	Higher Catalytic Efficiency	11
1.3.2	Higher Selectivity	12
1.3.3	Higher-Temperature Tolerance	17
1.3.4	Safety Considerations	19
1.4	Toward Higher Degradability and Recyclability	21
1.4.1	Incorporation of Chemically Labile Moieties into Polymer Chains for Higher Degradability	22
1.4.2	Development of Novel Chemically Recyclable Polyesters	25
1.5	Summary and Outlook	29
	References	30
2	Organocatalyzed Copolymerization of CO₂ with Epoxide Toward Polycarbonate Synthesis	45
	<i>Xiaoshuang Feng and Yves Gnanou</i>	
2.1	Introduction	45
2.2	Discovery of TEB Catalyzed CO ₂ /Epoxides Copolymerization	46
2.3	Development of TEB Catalyzed CO ₂ /Epoxides Copolymerization	50
2.4	Synthesis of CO ₂ -Based Block Copolymers	55
2.4.1	One-Step Ter-, Quater-Polymerization	55
2.4.2	Polycarbonate Block Copolymers from Orthogonal Polymerization	58

2.4.3	All-Polycarbonate Block Copolymers	60
2.4.4	CO ₂ -Based Triblock Copolymers	62
2.5	Bifunctional Organoboron Catalysts	65
2.5.1	9-BBN Tethered with Ammonium Cations	65
2.5.2	9-BBN Tethered with Phosphonium Cations	67
2.5.3	Borinane Tethered with Ammonium Cations	68
2.6	Conclusions	69
	References	70
3	Organocatalyzed Ring-Opening Copolymerization of Cyclic Anhydride and Cyclic Ether (Acetal)	79
	<i>Xun Zhang, Chengjian Zhang, and Xinghong Zhang</i>	
3.1	Introduction	79
3.2	The Copolymerization of Epoxide with Cyclic Anhydride	81
3.2.1	The Scope of Epoxides and Cyclic Anhydrides	81
3.2.2	Metal Catalysts	82
3.2.3	Organocatalysts	85
3.2.3.1	Organic Bases	86
3.2.3.2	Bicomponent Lewis Pair	88
3.2.3.3	Bifunctional Lewis Pair	92
3.3	The Copolymerization of Oxetane with Cyclic Anhydride	95
3.4	The Copolymerization of Tetrahydrofuran with Cyclic Anhydride	97
3.5	The Copolymerization of Cyclic Acetal (Aldehyde) with Cyclic Anhydride	100
3.6	Polyester-Based Block Copolymer	103
3.7	Conclusions and Outlook	105
	References	107
4	Organocatalysts for the Preparation of Degradable and Closed-Loop Recyclable Polyesters	115
	<i>Yong Shen and Zhibo Li</i>	
4.1	Introduction	115
4.2	Catalytic Mechanism of Various Organocatalysts	116
4.2.1	Electrophilic Monomer Activation Mechanism	116
4.2.2	Nucleophilic Monomer Activation Mechanism	117
4.2.3	Chain-End Activation Mechanism	117
4.2.4	Bifunctional Activation Mechanism	118
4.3	Organocatalytic ROP of Lactones or Lactides	119
4.3.1	γ-Butyrolactone and its Derivatives	119
4.3.2	δ-Valerolactone and ε-Caprolactone	124
4.3.3	δ-Valerolactone Derivatives	129
4.3.4	Lactide	131
4.3.5	Large-Membered Lactones	135
4.4	Summary and Perspective	136
	References	137

5	Organo-Catalyst Catalyzed Ring Opening Polymerization of N-Carboxyanhydrides	147
	<i>Chongyi Chen and Zhibo Li</i>	
5.1	Introduction	147
5.2	Organo-Catalysts for NCA Ring Opening Polymerization	149
5.2.1	Organo-Catalysts Before 2010	149
5.2.2	Amine-Based Organo-Catalysts	150
5.2.3	Other Organo-Catalysts	156
5.2.4	Autocatalysis of NCA Ring Opening Polymerization	160
5.3	Conclusions and Future Prospects	165
	Abbreviations	166
	References	166
6	Organocatalyst Catalyzed Ring Opening Polymerization of O(S)-Carboxyanhydride to Produce High Performance Poly(thio)esters	173
	<i>Yinuo Zhu and Youhua Tao</i>	
6.1	Introduction	173
6.2	Synthesis and Purification of O(S)-Carboxyanhydride Monomers	175
6.3	The Racemization of α -Proton	175
6.4	Organocatalyst for OCA Polymerization	176
6.4.1	ROP Catalyzed by DMAP	176
6.4.2	ROP Catalyzed by N-Heterocyclic Carbenes	178
6.4.3	ROP Catalyzed by Acid/Base Adducts	178
6.4.4	Thiourea-Based Organocatalysts for OCAs Polymerization	179
6.5	Organocatalyst for SCA Polymerization	182
6.6	Conclusion and Perspective	185
	References	186
7	Organocatalyzed Stereoselective Ring-Opening (Co)Polymerization	191
	<i>Shaofeng Liu and Daniel Taton</i>	
7.1	Introduction	191
7.2	Mechanisms in the Organocatalyzed Stereoselective ROP	192
7.3	Organic Acids for Stereoselective ROP of <i>rac</i> -LA	193
7.4	Organic Bases for Stereoselective ROP of <i>rac</i> -LA	196
7.4.1	N-Heterocyclic Carbenes (NHCs)	196
7.4.2	Amidines and Guanidines	198
7.4.3	Phosphazenes	198
7.5	Dual Organocatalysts	200
7.5.1	Mono-Component Bifunctional Organocatalysts	200
7.5.2	Bi-Component Organocatalysts	203
7.6	Organocatalysts for Stereoselective ROP of Other Cyclic Monomers	211
7.7	Conclusion	212
	Acknowledgements	213
	References	213

8	Ring-Opening Polymerization of Epoxides Through Organocatalysis	219
	<i>Lijun Liu, Yuxuan Zhou, Xingyu Tang, and Junpeng Zhao</i>	
8.1	Introduction	219
8.2	Catalyst and Mechanism	220
8.2.1	Single-Component Catalyst	221
8.2.1.1	Base	221
8.2.1.2	Acid	223
8.2.2	Two-Component Catalyst	225
8.3	Synthesis of Functionalized Polyether	227
8.3.1	End-Group Functionalization	228
8.3.2	Pendant-Group Functionalization	230
8.4	Synthesis of Polyether-Based Block Copolymer	232
8.4.1	One-Pot Two-Step Block Copolymerization	232
8.4.2	One-Step Block Copolymerization	236
8.5	Conclusion and Outlook	240
	References	240
9	Organo-Borane Catalysis for Ring Opening Polymerization of Epoxides	253
	<i>Xiaowu Wang and Zhibo Li</i>	
9.1	Introduction	253
9.2	Fundamentals of Borane Compounds	253
9.2.1	General Characteristics of Boron and Boranes	253
9.2.2	Bond Length and Strengths	254
9.2.3	Characterization	255
9.2.4	Lewis Acidity of (Organo)Borane	255
9.3	Et ₃ B-Mediated ROP of Epoxides	256
9.3.1	Introduction of ROP of Epoxides	256
9.3.2	Et ₃ B-Based Binary Lewis Pair Systems in the ROP of Epoxides	258
9.3.3	Mechanism of Et ₃ B Mediated ROP of Epoxides	260
9.3.4	Poly(alkylene oxide) Structures: Novel and Innovative Polyether Architectures	261
9.4	Modified Organoborane Mediated ROP of Epoxides	264
9.4.1	One-Component Ammonium Borane-Based Lewis Pair Systems Mediated ROP of Epoxides	265
9.4.2	One-Component Phosphonium Borane-Based Lewis Pair Systems Mediated ROP of Epoxides	269
9.4.3	Silicon-Based Borane Lewis Pair System	272
9.4.4	Macromolecular Organoborane Mediated ROP of Epoxides	272
9.4.5	Poly(alkylene oxide) Structures: Innovative Polyether Architectures	274
9.5	Chiral Organoborane Mediated Asymmetric ROP of Epoxides	279
9.6	Conclusion and Outlook	281
	References	283

10	Organocatalyst for Ring-Opening Polymerization of Cyclosiloxanes Toward Polysiloxanes	289
	<i>Na Zhao, Yuetao Liu, and Zhibo Li</i>	
10.1	Introduction	289
10.2	Anionic ROP of Cyclosiloxanes	291
10.3	Phosphazene-Catalyzed Anionic ROP of Cyclosiloxanes	291
10.3.1	Schwesinger's Phosphazene Bases	293
10.3.2	Phosphazenium Hydroxide P_5OH	293
10.3.3	Cyclic Trimeric Phosphazene Base (CTPB)	295
10.3.4	Trisphosphazene Base – $C_3N_3-Me-P_3$	297
10.3.5	Guanidinophosphazene – HTGCP	297
10.4	Guanidines-Catalyzed Anionic ROP of Cyclosiloxanes	297
10.5	Phosphorus Ylides-Catalyzed Anionic ROP of Cyclosiloxanes	302
10.6	NHC-Catalyzed Anionic ROP of Cyclosiloxanes	303
10.7	Conclusion	304
	References	305
11	Organic Lewis Pair in Polymer Synthesis	309
	<i>Mingqian Wang, Zhiqiang Ding, Bin Wang, and Yuesheng Li</i>	
11.1	Lewis Pair Catalytic Ring-Opening Polymerization of Cyclic Esters	309
11.2	Mechanisms for Lewis Pair-Catalyzed ROP of Cyclic Esters	310
11.3	Lewis Pairs Used for ROP of Cyclic Ester	311
11.3.1	Organoboron-Based Lewis Pair	311
11.3.2	Organoaluminum-Based Lewis Pair	313
11.3.3	Organozinc-Based Lewis Pair	315
11.3.4	Metal Halide-Based LPs	318
	References	322
12	Organocatalysts for Radical Polymerization	325
	<i>Chenyu Wu, Qiang Ma, Baoshan Hou, Zhilei Wang, Zikuan Wang, and Saihu Liao</i>	
12.1	Photocontrolled Organocatalyzed Radical Polymerization	325
12.2	Organocatalyzed Atom Transfer Radical Polymerization (O-ATRP)	328
12.2.1	Mechanism of O-ATRP	328
12.2.2	Polynuclear Aromatic Hydrocarbons	328
12.2.3	Phenothiazine Derivatives	329
12.2.4	Dihydrophenazine Derivatives	330
12.2.5	Phenoxazine Derivatives	331
12.2.6	Dimethylacridine Derivatives	332
12.2.7	Organic Donor–Acceptor Scaffolds	333
12.2.8	Heteroatom-Doped Anthanthrene Derivatives	334
12.2.9	Other Classes	335
12.3	Photoinduced Electron/Energy Transfer Reversible Addition-Fragmentation Chain Transfer (PET-RAFT)	337

12.3.1	Mechanism of PET-RAFT	337
12.3.2	Porphyrin Derivatives	338
12.3.3	Fluorescein Derivatives	340
12.3.4	Phthalocyanine Derivatives	340
12.3.5	Other Classes	340
12.4	Structure-Property-Performance Relationships	341
12.4.1	Structure-Property-Relationships	341
12.4.2	Photon Absorption	342
12.4.2.1	Theory for Absorption Spectrum	342
12.4.2.2	Full Width at Half Maximum	343
12.4.2.3	Maximum Absorption Wavelength	344
12.4.2.4	Molar Extinction Coefficient	344
12.4.3	Excited-State Evolution	346
12.4.3.1	Quantum Yield for Long-Lived State	346
12.4.3.2	Theory for Fluorescence	347
12.4.3.3	Theory for Internal Conversion	348
12.4.3.4	Theory for Intersystem Crossing	349
12.4.4	Activation	350
12.4.5	Deactivation	352
12.4.6	Property-Performance Relationships	353
12.5	Outlook	354
	References	355
13	Organocatalyst-Catalyzed Non-Radical Photopolymerizations	365
	<i>Yun Liao and Saihu Liao</i>	
13.1	Introduction	365
13.2	Organocatalysts for Photocontrolled Cationic Polymerization	366
13.3	Organocatalysts for Photocontrolled Ring-Opening Polymerization	377
13.4	Organocatalysts for Photocontrolled Ring-Opening Metathesis Polymerization (ROMP)	384
13.5	Organocatalysts for Photocontrolled Step-Growth Polymerization	387
	References	392
14	Enzyme-Catalyzed Controlled Radical Polymerization	399
	<i>Ruoyu Li and Zesheng An</i>	
14.1	Introduction	399
14.2	Enzymatic Deoxygenation in RAFT Polymerization	400
14.3	Enzymatic Initiation of RAFT Polymerization	403
14.4	Enzymatic Deoxygenation in ATRP	407
14.5	Enzyme-Catalyzed ATRP	408
14.6	Conclusions	411
	Acknowledgments	411
	References	411

15 Organocatalyst-Catalyzed Degradation of Polymers 419
 Ge Yang and Zhibo Li

15.1 Introduction 419

15.2 Chemical Degradation of Functional Polymers 420

15.2.1 Organic Bases and Organic Acids 420

15.2.2 Ionic Liquids and Acid–Base Salts 423

15.3 Photocatalytic Degradation of Non-Functional Polymers 426

15.4 Conclusion 427
