1 Wetting-Controlled Systems of Biological Surfaces 1

1.1 Introduction 1

1.1.1 Duck Feather 1

1.1.2 Insect Wings 3

1.1.3 Lotus Leaf 3

1.1.4 Beetle Back 4

1.1.5 Rice Leaf 4

1.1.6 Water Strider 4

1.1.7 Butterfly Wing 4

1.1.8 Mosquito Eye 5

1.1.9 Rose Petal 5

1.1.10 Fish Scale 5

1.1.11 Cicada Wing 6

1.1.12 Spider Silk 6

1.1.13 Salvinia 6

1.1.14 Cacti 7

1.1.15 Gecko Skin 7

1.1.16 Nepenthes 7

1.2 Wetting Features of Biological Surfaces 8

1.2.1 Wet-Rebuilt Spindle-Knot with Nanofibrils on Spider Silk 8

1.2.2 Slippery in Multiorder Ridges on Peristome Surface of Nepenthes 10

1.2.3 Selectively Directional Ratchet Transport 12

1.2.4 Multilevel Structured System of Cacti 13

1.2.5 Overlapping Arrangement of Fish Scale 14

1.3 Antiwetting Features of Biological Surfaces 16

1.3.1 Multilevel Wetting-Controlling on Duck Feather 16

1.3.2 Gradient Micro- and Nanostructures for Droplet Suspending-up 18

1.3.3 Oriented Microhair with Nanogroove for Superhydrophobic Floating 20

1.3.4 Butterfly Wing with Multilevel-oriented Structures 21

1.4	Biological Patterns on Micro- and Nanoscale Structures	23
1.4.1	Isotropic Micro- and Nanostructured Pattern	24
1.4.2	Anisotropic Pattern for Wetting Direction	25
1.4.3	Alternative Hydrophilic–Hydrophobic Patterns	26
1.5	Wetting-Controlled Effects	27
1.5.1	Spider Silk Effect: Cooperative Effect of Roughness and Curvature	28
1.5.2	Cactus Effect: Cooperative Effect of Multilevel Conical Geometries	29
1.5.3	Araucaria Leaf Effect: Steering Effect of Asymmetric Capillary Ratchet Geometries	30
1.5.4	Beetle Back Effect: Hydrophilic–Hydrophobic Heterogeneous Pattern	31
1.5.5	Self-Propelling Effect: Ultrasuperhydrophobic Micro- and Nanostructures	32
1.5.6	Janus Effect of Antifreeze Proteins: Controlling Ice Formation	34
	References	36
2	Mechanism and Theory of Wetting-Controlled Surfaces	41
2.1	Concept of Wetting-Controlled Effects	41
2.1.1	Wetting and Significance	41
2.1.2	Basic Definition of Wetting	42
2.1.3	Wetting in Biological Systems	44
2.1.4	Technological Relevance of Wetting Control	47
2.2	Wetting Theory of Surfaces	48
2.2.1	Fundamental Wetting Theories	48
2.2.2	Extension and Theoretical Models	49
2.2.3	Wetting Dynamics and Kinetics	51
2.2.4	Surface Roughness and Wetting	52
2.2.5	Wetting Transitions and Behavior	53
2.3	Physics of Wetting	55
2.3.1	Molecular Interactions in Wetting and Adhesion	55
2.3.2	Wetting Properties and Adhesion	56
2.3.3	Biological Structures and Adhesion Models	58
2.3.4	Quantitative Analysis of Wetting	59
2.3.5	Wetting Under External Influences	63
2.4	Surface Chemistry and Structures	64
2.4.1	Chemical Composition and Wetting	64
2.4.2	Surface Topography and Wetting Behavior	65
2.4.3	Chemical Modifications for Wetting Control	66
2.4.4	Chemical Heterogeneity and Janus	68
2.4.5	Chemistry Gradient for Controlling Wetting	70
2.5	Bioinspired Wetting-Controlled Mechanism	73
2.5.1	Liquid-Repellent Effects	73
2.5.2	Liquid Unidirection–Transport Effects	75
2.5.3	Controlling Ice Effects	76
2.5.4	Atmospheric Water Capture Effects	78

2.6	Self-Propelling Effects of Surfaces	82
2.6.1	Natural Self-Propelling System	82
2.6.2	Self-Propelling Theory from Gradient Surfaces	84
2.6.3	Self-Propelling Controlled on Conical-Structured Surfaces	85
2.6.4	Self-Propelled Droplet Jumping on Wetting-States Surfaces	88
2.6.5	Self-Propelled Topological Liquid Diode	89
2.7	Capillary Regime	92
2.7.1	Introduction of Capillary	92
2.7.2	Bioinspired Structured Surfaces with Controlled Capillary Rise	94
2.7.3	Rough Capillary Rise: Dual-Rise Model	95
2.7.4	Capillary Force-Induced Driving Strategy for Separations	97
2.7.5	Capillary Microfluidics System	100
2.7.6	Capillary Solar Evaporator	103
2.8	Liquid Infused Surfaces	105
2.8.1	Liquid-Infused Regulation	105
2.8.2	Bioinspired Lubricated Slippery Magnetic Responsive Array	107
2.8.3	Slippery Surface for Defensive-Offensive Antifouling	110
2.8.4	Slippery Liquid-Infused Surface for Integrative Functions	111
	References	115
3	Design on Surfaces with Wetting-Controlled Effects	127
3.1	Concept of Gradients	127
3.1.1	Static Gradients	127
3.1.2	Dynamic Gradients	130
3.2	Chemistry Gradient	130
3.2.1	Gradient of Chemical Groups in Density	131
3.2.2	Molecule Gradient	131
3.2.3	Dual Gradient in Janus Wettability	133
3.2.4	Gradient in Thickness of Membrane	135
3.2.5	Gradients of Polymer Brushes	136
3.3	Texture Gradients	137
3.3.1	Anisotropic Texture Gradient	137
3.3.2	Texture Gradient of Wetting Heterogeneity	137
3.3.3	Texture Gradient of Wetting-Controlling	138
3.3.4	Texture with Gradient Polymers	140
3.4	Geometry Gradient	142
3.4.1	Spine with Microbarbs and Channels	142
3.4.2	Wedge-Induced Gradient	143
3.4.3	Conical-Induced Gradient for Wetting-Controlling	144
3.4.4	Helical-Induced Gradient	147
3.4.5	Spine-Shaped Gradient	148
3.5	Synergism of Multi-gradients	150
3.5.1	Rough Spindle-Knot for Photocatalyst	150
3.5.2	Liquid-Infused Spindle-Knot	151
3.5.3	Composite Wettability Gradient	154

3.5.4	Wettability Gradient-Induced Diode	155
3.5.5	Electronic Skin with Dual-Gradient Wettability	157
3.6	Surface Tension Gradient	159
3.6.1	Definition of Surface Tension Gradient	159
3.6.2	Asymmetric Tube to Control Surface Tension	160
3.6.3	Shape Shifting of Surface Tension and Capillary	162
3.6.4	Wettability Gradient in Cross-thickness	164
	References	166
4	Development of Bioinspired Fabrication and Methods	175
4.1	Rayleigh Instability	175
4.1.1	Formation of Rayleigh Instability	175
4.1.2	Controlling of Rayleigh Instability	177
4.1.3	Bioinspired Effects of Rayleigh Instability	178
4.2	Microfluidics	179
4.2.1	Introduction of Microfluidics	179
4.2.2	Multiphase Microfluidics	181
4.2.3	Coaxial Capillary Microfluidic	182
4.2.4	Parallel-Nozzles Microfluidic	183
4.2.5	Co-Axial Microfluidic	184
4.3	Fluid-Coating	184
4.3.1	Origin of Fluid-Coating	185
4.3.2	Velocity-Regulated Fluid-Coating	187
4.3.3	Fluid-Coating for Composite Nanofibers	188
4.4	Electrospinning	189
4.4.1	Basics of Electrospinning	189
4.4.2	Bioinspired Lotus-like Structures	190
4.4.3	Bioinspired Heterostructured Fibers	191
4.4.4	Wet Adhesive with Supercold Tolerance	193
4.4.5	Omniadhesive Fibers	194
4.4.6	Composite Nanofibrils	195
4.5	Electrochemistry	197
4.5.1	Wettable Gradient Pattern	197
4.5.2	Multiinspired 3D Wettable Gradient	198
4.5.3	Bidirectional Microchannel-Connected Pattern	199
4.5.4	Capillarity-Induced Oxidation	200
4.5.5	Bipolar Electrochemistry	201
4.6	Fluid Diffusion for Gradient	202
4.6.1	Liquid-Confined Modification for Janus Wire	204
4.6.2	Ethanol-Infused Nanofibrils Wire for Cutting Droplet	205
4.7	Laser Techniques	205
4.7.1	Laser-Fabricated Geometric Gradient Surfaces	207
4.7.2	Laser Microfabrication Strategy	207
4.7.3	Laser Ablation for Wettability Pattern	211
4.8	Printing Techniques	211

4.8.1	Introduction to Printing Techniques	213
4.8.2	Principle of Fabrication from Printings	214
4.8.3	Heterostructure Patterning on Printed Matrix	215
4.8.4	Printed Divisional Optical Biochip	215
4.9	Nanotechnology	218
4.9.1	Superhydrophilic Photothermal Nanocapsule	218
4.9.2	Photothermal Dual-Nanoscale Effect	219
4.9.3	MOF-Based Nanostructure	220
4.9.4	MOF-Composite Nanofibers	221
4.10	Plasma Techniques	222
4.10.1	Functionalities of Titania Nanotube Arrays	223
4.10.2	Pattern Fabrication in Wetting-Enabled-Transfer Strategy	224
	References	226
5	Wetting-Controlled Effects for Functions and Applications	235
5.1	Condensate Droplet Transport	235
5.1.1	Coalesced-Droplet Vertical Transport	235
5.1.2	Hierarchical Droplet Size-Effect	236
5.1.3	Coalesced-Droplet Self-Propelling	237
5.2	Fog Droplet Harvesting	238
5.2.1	Introduction of Bioinspired Fog Harvesting	239
5.2.2	Thermodynamical Fog Harvesting	240
5.2.3	Janus-Integrated Fog Harvesting	241
5.3	Atmospheric Water Harvesting	244
5.3.1	MOF-Composite Nanofibers Textures	244
5.3.2	MOF-Based Polymer Composite	245
5.3.3	Super-hydrophilic Photothermal Nanocapsule	247
5.4	Anti-icing	248
5.4.1	Anti-icing onto Wind Turbine Blades	248
5.4.2	Robust Photothermal Icephobic Surface	249
5.4.3	Ice Inhibition for Cryopreservation	251
5.5	Liquid Repellency	252
5.5.1	Dually-Mobile Super-Repellency	252
5.5.2	Multi-liquid Repellency	254
5.5.3	Switchable Repellency in Both Air and Liquid	254
5.6	Energy Harvesting	256
5.6.1	Photothermal Energy Storage	256
5.6.2	Salinity-Gradient Energy Harvesting	257
5.6.3	Moisture-Driven Energy Generation	260
5.7	Heat Transfer	261
5.7.1	Thermal Energy Regulation and Utilization	261
5.7.2	Switchable Thermoregulation	263
5.7.3	Radiative Cooling Regulation	267
5.8	Artificial Skin and Sensor	268

- 5.8.1 Skin-Inspired Devices 268
- 5.8.2 Artificial Skin Vision by Wet-Infused State 269
- 5.8.3 Bioinspired Ionic Skins 271
- 5.9 Medical Application 272
 - 5.9.1 Directional-Controllable Drug Delivery 272
 - 5.9.2 Nature-Inspired Wet Drug Delivery 273
 - 5.9.3 Inspired Active Injection Drug Delivery 274
