

Contents

- 1 Introduction 1**
- 2 Theoretical Background 4**
 - 2.1 Electrochemistry 4
 - 2.1.1 Fundamentals 4
 - 2.1.2 Thermodynamics 7
 - 2.1.3 Kinetics 9
 - 2.2 Anodic Processes at Metal Electrodes 13
 - 2.2.1 Oxide Formation 14
 - 2.2.2 Oxygen Evolution 16
 - 2.2.3 Metal Dissolution 16
 - 2.3 Electrochemical Machining 21
 - 2.3.1 Through-Mask Electrochemical Machining 23
 - 2.3.2 Literature Review 25
 - 2.4 Mass Transport 37
 - 2.5 Ionic Liquids and Highly Concentrated Solutions 40
 - 2.6 Printed Circuit Boards 42
 - 2.6.1 Fabrication Processes 43
 - 2.6.2 Outlook 48
 - 2.7 Overview Metal Patterning Techniques 50

3 Materials and Methods 52

3.1 List of Chemicals 52

3.2 Experimental 52

3.2.1 Samples 52

3.2.2 Laboratory Setups 54

3.2.3 TMECM Experiments 58

3.3 Characterization Techniques 61

3.3.1 Confocal Laser Scanning Microscopy 61

3.3.2 Scanning Electron Microscopy 63

3.3.3 Raman Spectroscopy 64

3.4 Additive Manufacturing of Polymers 65

3.5 Computational Fluid Dynamics-Simulations 66

4 Analysis of Copper Nitrate Surface Film 68

4.1 Abstract 69

4.2 Introduction 69

4.3 Results and Discussion 72

4.3.1 Raman Measurements 72

4.3.2 Ex-situ Investigation of Copper Nitrate 84

4.4 Conclusion 85

5 Investigation of Reaction Mechanism 87

5.1 Sodium Nitrate Electrolytes 87

5.1.1 Copper 88

5.1.2 Other Metals 115

5.1.3 Conclusion 124

5.1.4 Considerations on the Thermodynamics of the Postulated Mechanism 125

5.2 Sodium Chloride Electrolytes 128

5.2.1 Copper 129

5.2.2	Other Metals	141
5.2.3	Conclusion	145
5.3	Sodium Sulfate Electrolytes	146
5.3.1	Copper	147
5.3.2	Other Metals	151
5.4	Conclusion	153
6	Investigation of Anisotropy in TMECM	155
6.1	Introductory Remarks on the Etch Factor	155
6.2	Anisotropy in Sodium Nitrate Electrolytes	156
6.2.1	Abstract	157
6.2.2	Introduction	158
6.2.3	Results and Discussion	160
6.2.4	Conclusion	179
6.2.5	Other Factors Influencing the Anisotropy in TMECM	180
6.3	Anisotropy in Sodium Chloride and Sodium Sulfate Elec- trolytes	188
6.3.1	Sodium Chloride Electrolytes	188
6.3.2	Sodium Sulfate Electrolytes	191
7	Process Development	193
7.1	Comparison of Flow Conditions and Comparison to Chem. Etching	193
7.2	Inhomogeneities in Current Distribution – Challenges and Solutions	199
7.2.1	Island Formation	200
7.2.2	Macroscopic Edge Effect – Simple Mask Design . .	201
7.2.3	Macroscopic and Microscopic Inhomogeneities – Complex Mask Designs	203
7.3	Application to Solar Cells	209

8 TMECM – a Suitable Process for PCB Manufacturing? . . . 214

8.1 Homogeneity 215

8.2 Anisotropy 218

8.3 Edge Steepness 219

8.4 Environmental Sustainability and Economic Viability . . 219

8.5 Conclusion 223

9 Conclusion and Outlook 225

10 Appendix 233

10.1 SI Model Mechanism TMECM 233

10.1.1 Simulation of the Flow Velocity 233

10.1.2 Calculation of the Limiting Current Density 233

10.1.3 Estimation of Surface Film Resistances 233

10.1.4 Calculation of the Size of the Octahedral Sites in
the Nitrate Matrix 234

10.2 Polarization Curves of Copper in Sodium Chloride 236

10.3 Polarization Curves of Copper in Sodium Sulfate 236

10.4 Analysis of Reliability of EF Results 238

10.4.1 Reproducibility of LEXT Measurements 238

10.4.2 Reliability of Mask Opening Width Determination 240

10.4.3 Reliability of Calculated Etch Factors 241

10.5 SI Model Anisotropy TMECM 243

10.5.1 Simulation of the Flow Velocity 243

10.5.2 Influence of Wetting Agent on EF 245
