

Content

1 Introduction 1

1.1 General introduction..... 1

1.2 Anaerobic digestion..... 3

1.2.1 Substrates and ensiling 3

1.2.2 Two-stage anaerobic digestion 5

1.3 Biorefineries and Volatile Fatty Acids..... 8

1.4 Objectives of the study..... 11

2 Part I: Testing different ensiling parameters to increase butyric acid concentration for maize silage, followed by silage separation and methane yield potential of separated solids residues..... 12

2.1 Abstract 12

2.2 Introduction..... 12

2.3 Material and methods 14

2.3.1 Raw material..... 14

2.3.2 Technical setup for ensiling..... 15

2.3.3 Variations..... 15

2.3.4 Ensiling procedure..... 15

2.3.5 Separation procedure and extraction efficiency 16

2.3.6 Specific methane yield determination by Hohenheim Biogas Yield Test (HBT) 16

2.3.7 Analytical methods 17

2.3.8 Statistical methods 20

2.4 Results and discussion 20

2.4.1 Chemical composition of the raw material..... 20

2.4.2 Silage characteristics 21

2.4.3 Separation and composition of the PJ..... 25

2.4.4 Specific methane yield (SMY) and biogas potential..... 28

2.4.5	Butyric acid and energy yield per hectare	29
2.5	Conclusion.....	29
3	Part II: Combined butyric acid and methane production from grass silage in a novel green biorefinery concept.....	31
3.1	Abstract	31
3.2	Introduction.....	31
3.3	Material and methods	33
3.3.1	Raw material.....	33
3.3.2	Fermentation treatments	33
3.3.3	Separation procedure and extraction efficiency	35
3.3.4	Specific methane yield determination by Hohenheim Biogas Yield Test (HBT)	35
3.3.5	Analytical Methods	36
3.3.6	Statistical methods	38
3.4	Results and discussion	39
3.4.1	Raw material composition.....	39
3.4.2	Chemical composition of the silage	39
3.4.3	Separation, Methane Yield Potential and Chemical Composition of the Press Juice	44
3.4.4	Upscaling, production scheme and technical obstacles	49
3.5	Conclusions.....	50
4	Part III: pH-depended flushing in an automatized batch leach bed reactor system for volatile fatty acid production.	51
4.1	Abstract	51
4.2	Introduction.....	51
4.3	Material and methods	53
4.3.1	Leach bed reactor system.....	53
4.3.2	Experimental procedure	56

4.3.3	Raw material composition.....	56
4.3.4	Chemical analyses	58
4.3.5	Specific methane yield determination by Hohenheim Biogas Yield Test (HBT)	58
4.3.6	VFA-yield	59
4.3.7	Statistical analysis	59
4.4	Results and discussion	59
4.4.1	VFA-yield	59
4.4.2	pH	63
4.4.3	VFA-concentration.....	63
4.4.4	Biogas production.....	64
4.4.5	Solid digestate	65
4.5	Conclusion.....	68
5	General discussion	69
5.1	Butyric acid and volatile fatty acid production	69
5.2	Separation	72
5.3	Methane production	74
5.4	Theoretical upscaling	78
5.5	Conclusion and outlook.....	79
6	Summary.....	82
7	Zusammenfassung	85
8	List of references	88
