

Table of contents

List of Figures	IX
List of Tables	XI
1 Introduction, motivation and structure of the thesis	1
1.1 Motivation of the thesis	1
1.2 Thesis research questions	3
1.3 Thesis contributions	3
1.4 Thesis outline	4
2 Preliminaries	7
2.1 Introduction to motion planning	7
2.2 Terminology	8
2.3 Taxonomy of planning methods	11
2.4 Motion planning for automated cars	14
2.4.1 Diversity of driving environments	15
2.4.2 Planning assessment criteria and driving modes	15
2.5 Problem statement	19
3 Related work	21
3.1 From advanced driver assistance systems towards automated cars	21
3.1.1 Trajectory planning	22
3.1.2 On-road swerve path generation	25
3.1.3 Collision checking and avoidance	26
3.2 Optimization methods	27
3.3 Driving mode selection	30
3.3.1 Multi-layered search space representations	31
3.3.2 Hierarchical driving mode state machine	31
3.3.3 End-to-end machine learning approaches	32
4 A framework for universal driving strategy planning	33
4.1 Planning in high dimensional state space	33
4.1.1 Identifying key components of sampling based planning	35
4.1.2 PSP integration into existing architecture	37
4.1.3 Challenges and opportunities: Modeling a universal drive	40
4.1.4 Non-functional requirements: safety, comfort and acceptance	42
4.2 PSP world representations	43
4.3 Visualizing high dimensional solutions	45
5 Sampling-based planning in phase space	49
5.1 Schematic of a complete planning sequence	49

5.2	State space setup and exploration	50
5.2.1	State propagation strategies	51
5.2.2	Vehicle motion guided sampling	52
5.2.3	Random state sampling	53
5.3	Trajectory planning	53
5.3.1	Generating path segments with clothoids	53
5.3.2	Generating velocity profiles	57
5.4	Trajectory optimization	60
5.4.1	Extended planning horizon with multiple layers	60
5.4.2	Directed graph optimization using dynamic programming	64
5.4.3	Other PSP optimization methods	69
5.5	Rules and heuristics	69
5.5.1	Simplification of the state space	71
5.5.2	How to choose a planning horizon length?	72
6	A universal approach for driving strategies	75
6.1	Modeling driving behaviors: Cost functions	75
6.1.1	State transition costs	75
6.1.2	Optimizing for a universal driving experience	79
6.2	Situation awareness: Observing the most relevant things	82
6.2.1	Optimizing the vehicle's sensor coverage	83
6.2.2	Interpretation of a sensor coverage cost map	87
6.3	Simulation experiments	88
6.3.1	Validation of driving strategy generation	90
6.3.2	Evaluation of smart positioning	93
6.3.3	PSP performance analysis	96
7	Modeling ego motion uncertainty	103
7.1	Why modeling uncertainty matters	103
7.2	Ego motion uncertainty	104
7.2.1	A post-processing planning extension	105
7.2.2	State estimation and model correction	109
7.2.3	Re-evaluate trajectory collision probability	110
7.2.4	Collision detection algorithm	112
7.3	Simulation experiments	113
8	Summary, outlook and contributions	117
	References	121
A	Supplemental material	129
