

Contents

Preface — VII

1	Theory of sets — 1
1.1	Need of axiomatic system — 1
1.2	Logic — 2
1.3	The Zermelo–Fraenkel axiomatic system — 4
1.4	Relation — 7
1.5	Map — 10
1.6	Construction of number systems. I — 14
1.7	Construction of number systems. II — 16
2	Metric spaces — 26
2.1	Metric spaces: examples — 26
2.2	Normed linear spaces — 33
2.3	Metric-preserving maps — 40
2.4	Open and closed sets — 44
2.5	Distance between sets — 59
3	Maps between metric spaces — 73
3.1	Continuous maps — 73
3.2	Homeomorphisms — 87
3.3	Equivalent metrics — 99
3.4	Isometry — 109
3.5	Finite metric spaces — 121
4	Product and quotient metric spaces — 127
4.1	Product of metric spaces — 127
4.2	Metric-preserving maps — 132
4.3	Quotient metric space — 135
5	Sequences in metric spaces — 141
5.1	Convergent sequences — 141
5.2	Complete metric spaces — 149
5.3	Completion of a metric space — 162
5.4	Completion of $\mathbb{Q}$ — 169
5.5	Baire category theorem — 175
6	Compact metric spaces — 188
6.1	Compactness — 188
6.2	Equivalence of compactness — 199

X — Contents

6.3 Hilbert cube — **207**

6.4 Cantor set — **213**

7 Connected metric spaces — 221

7.1 Connectedness — **221**

7.2 Components in metric spaces — **225**

7.3 Path connectedness — **227**

Bibliography — 231

Index — 233
