Preface	ix
List of figures	xv
List of tables	xxi
List of abbreviations and acronyms	xxiii
1 Life and climate in an ice age	1
1.1 Continental climates during the Ice Age.	1
1.2 The glacial world—according to Wally Broecker	8
1.3 Ice age forests	10
1.4 The Last Glacial Maximum (LGM)	11
2 Variability of the Earth's climate	17
2.1 Factors that influence global climate	17
2.2 Stable extremes of the Earth's climate	21
2.3 The relation between ancient climates and CO ₂ concentration	26
2.3.1 Background	26
2.3.2 Introduction	28
2.3.3 The transition from the Last Glacial Maximum (LGM) to the pre-industrial era	36
2.3.4 The Early Pliocene: 3 to 5 million years ago	49
2.3.5 The past 20 million years or so	51
2.3.6 Initiation of Antarctic glaciation 34–33 million years ago	58
2.3.7 Peak warming around 40 million years ago	60
2.3.8 60 to 40 million years ago	61
2.3.9 100 to 300 million years ago	66

2.3.10	Estimates of climate sensitivity based on CO ₂ and climate in the Phanerozoic	66
2.4	Continental drift and continental geometry as a factor in paleo-climate change	84
2.4.1	Effects of continental geometry	84
2.4.2	Evolution of glaciation near the South Pole ~34 MYBP	88
2.4.3	Effect of the Isthmus of Panama on NH glaciation in the past 2,700,000 years	90
2.5	Ice ages in the recent geological past	95
2.6	Geological evidence of ice ages	97
3	Ice core methodology	105
3.1	History of ice core research	105
3.2	Dating ice core data	111
3.2.1	Introduction	111
3.2.2	Age markers	112
3.2.3	Counting layers visually	113
3.2.4	Layers determined by measurement	116
3.2.5	Ice flow modeling	120
3.2.6	Other dating methods	122
3.2.7	Synchronizing the dating of ice cores from Greenland and Antarctica	123
3.2.8	GISP2 experience	123
3.2.9	Tuning	125
3.2.10	Flimsy logic	125
3.3	Processing ice core data	127
3.3.1	Temperature estimates from ice cores	127
3.3.2	Climate variations	135
3.3.3	Trapped gases	135
4	Ice core data	137
4.1	Greenland ice core historical temperatures	137
4.2	Antarctica ice core historical temperatures	142
4.2.1	Vostok and EPICA data	142
4.2.2	Homogeneity of Antarctic ice cores	144
4.3	North-south synchrony	147
4.3.1	Direct comparison of Greenland and Antarctica ice core records	147
4.3.2	Interpretation in terms of ocean circulation	150
4.3.3	Seasonal variability of precipitation	151
4.3.4	Worldwide effects of changes originating in the NH	152
4.4	Interglacials	153
4.5	Data from high-elevation ice cores	157
4.6	Carbon dioxide	158
4.7	Sudden climate changes	167

5	Ocean sediment data	171
5.1	Introduction	171
5.2	Chronology	176
5.3	Universality of ocean sediment data	181
5.4	Summary of ocean sediment ice volume data	182
5.5	Ocean sediment data and polar ice core data compared	184
5.6	Historical sea surface temperatures	187
5.7	Ice-rafted debris	188
6	Other data sources	191
6.1	Devil's Hole	191
6.1.1	Devil's Hole data	191
6.1.2	Devil's Hole data and ocean sediment data compared	192
6.1.3	Devil's Hole: Global or regional data?	194
6.1.4	Devil's Hole data and Vostok data compared	195
6.2	Speleothems in caves	198
6.3	Magnetism in rocks and loess	199
6.3.1	Magnetism in loess	199
6.3.2	Rock magnetism in lake sediments	200
6.4	Pollen records	200
6.5	Physical indicators	202
6.5.1	Ice sheet moraines	202
6.5.2	Coral terraces	202
6.5.3	Mountain glaciers	205
6.6	Red Sea sediments	206
6.7	Influence of dust and iron	207
7	Summary of climate variations	209
8	Overview of the various models for ice ages in the recent past (3 MYBP to present)	215
8.1	Introduction	216
8.2	Variability of the Sun	217
8.3	The astronomical theory	218
8.4	Volcanism	219
8.5	Greenhouse gases	223
8.6	Role of the oceans	223
8.6.1	Glacial–interglacial cycles: the consensus view	224
8.6.2	Sudden climate change: the consensus view	228
8.6.3	Wunsch's objections	231
8.7	Models based on clouds	236
8.7.1	Extraterrestrial dust accretion	238
8.7.2	Clouds induced by cosmic rays	239
8.7.3	Ocean–atmosphere model	242
8.8	Models based on the Southern Hemisphere	244

9	Variability of the Earth's orbit: The astronomical theory	247
9.1	Introduction	247
9.2	Variability of the Earth's orbit	250
9.2.1	Variability within the orbital plane	250
9.2.2	Variability of the orbital plane	253
9.3	Calculation of solar intensities	254
9.4	Importance of each orbital parameter	255
9.5	Historical solar irradiance at higher latitudes	259
9.6	Connection between solar variability and glaciation–deglaciation cycles according to the astronomical theory	261
9.6.1	Models for ice volume	263
9.6.2	Review of the Imbrie model	271
9.6.3	Memory model	274
9.7	Models based on eccentricity or obliquity	274
9.7.1	A model based on eccentricity	274
9.7.2	The Mid-Pleistocene Transition	276
9.8	North or south?	278
10	The astronomical theory and data compared	281
10.1	Introduction	281
10.2	Data and the astronomical theory compared	282
10.2.1	Direct comparison of the variability of peak solar intensity with ice core data	284
10.2.2	The Imbrie ice volume model and ocean sediment data compared	291
10.2.3	Change in ice sheet volume and peak solar intensity compared	292
10.2.4	Terminations of ice ages and origins of interglacials	296
10.3	Spectral analysis	310
10.3.1	Introduction	310
10.3.2	Spectral analysis of solar and paleoclimate data	315
10.4	Status of our understanding	320
11	Future prospects	327
11.1	The next ice age (or lack thereof)	327
11.1.1	Introduction	327
11.1.2	Orthodoxy in climatology	328
11.1.3	Effect of CO ₂ growth on global temperature	333
11.1.4	Other evidence on the role of CO ₂	348
11.2	Ways of improving our understanding	370
11.2.1	The need to depoliticize climate change	370
11.2.2	Technical progress	372
	References	377
	Index	399
