

Contents

About the book — VII

Preface — IX

About the Editors — XV

Anil Kumar Pandey, Laxmipriya Parida, and Ashok Kumar Sahoo

Logarithmic third Hankel determinant for a subclass of starlike functions — 1

Monika Arora, Mahesh Kumar Sharma, and Kamalpreet Kaur

Effect of gyrotactic microorganisms in rotating magnetic nanofluids in porous media — 17

R. Krishnaprabha

Some applications of graph spectrum in post quantum cryptography — 31

Vijay K. Shukla and Prashant K. Mishra

Finite-time stability analysis of neutral type delay Cohen–Grossberg neural network with discontinuous activation function — 47

S. N. Rai, B. S. Bhadauria, and Anurag Srivastava

Influence of temperature modulation over heat/mass transport of Rivlin–Ericksen viscoelastic nanoliquid in Hele–Shaw cell — 57

Shabir Ahmad Malik

On an operator preserving polynomial inequality of Paul Turán — 75

Piu Kundu

Effect of interaction between two finite faults on ground deformation — 85

Melvin Varghese and G. Sheeja

On the number of bounded regions generated by a class of paths in the complex plane — 111

Jitender Singh and Renu Bajaj

Binomial and de Moivre revisited through differential equations — 125

Akshay S. Rane and Kshitij Patil

Modified projection method for second kind Fredholm integral equations with trigonometric polynomials — 131

Shilpee and B. S. Bhadauria

Effect of heat and mass transfer in binary nanofluids (for silver nanoparticles) saturated in porous medium under the influence of LTNE model and different gravity modulation — 145

Dhriti Raj Talukdar and H. Imo Mani Singha

A comparative analysis of standard Knapsack and Legendre–Knapsack cryptosystem — 169

Tania Bose, Renu Bala, and Madhu Aneja

Study of creep in composite functionally graded disc with non-linear thickness — 179

M. K. Gupta and Abha Sahu

On the $h(h\nu)$ -torsion tensor and the ν -curvature tensor of Matsumoto change with an h -vector — 189

Anup Kumar Behera and Priyanka Agrawal

Software reliability growth model considering power-law testing effort using optimization on hybrid PSO-GWO algorithm — 199

Flora Jeba S, Anirban Roy, and Manjil P. Saikia

On near-perfect numbers with five prime factors — 207

Neeti Ghiya and S Manjula

Eulerian integrals associated with the product of multivariable H -function and generalized M -series — 221

R. Bala, T. Bose, and M. Aneja

Upper bounds for the complex growth rates in the Darcy–Brinkman convection in a binary viscoelastic fluid in a saturated porous layer — 233

Kamal Wadhwa, Sanjay Choudhary, and Arvind Kumar Gupta

Some result of fixed-point theorems in complete M -fuzzy metric space — 243

Aronthung S Odyuo, P. Mercy, and Manoj Kumar Patel

FR-labeling on hybrid partition shell graphs — 261

R. K. Singh, R. G. Ghumde, and M. K. Patel

On essential M -Artinian modules — 269

Priti Singh and Sharvan Kumar

Properties of reductions of multiplication modules — 275

S Priyadharsini

Computational analysis of fractional vibrational equations — 285

Preeti Kalra and Nisha Malhotra

Analysis of modified fractional order Lotka–Volterra model — 307

Gautham B. Shenoy, A. Ragavaendra, S. B. Chandrakala, Badekara Sooryanarayana, and Muhammad Kamran Siddiqui

Topological indices of two chemical compounds used for drugs in the treatment of H1N1 — 335

M. Kumari, R. Mohanta, K. Prasad, and H. Mahato

On the Gaussian higher-order Mersenne numbers — 355

Sakshi Gupta and Shelly Garg

Petri net: modeling, properties and analysis techniques — 367

Ashish Negi and Ompal Singh

An inventory system with time-dependent linear demand for deteriorating items under uncertainty with a completely backlogged — 379

Deepak Kumar, Sukhchain Singh, and Bharat Bhushan

On *-reverse derivations of involutive rings — 389

C. Reena and M. Karthika

More functions via soft pre*-generalized closed sets — 397

Ekta Jain, Dhanpal Singh, and S. D. Ram

Modeling of piston problem for generalized Chaplygin gas — 409

J. K. Kushwaha and R. Vishwakarma

A new estimation of the degree of approximation of functions belonging to Lipschitz class by Borel–Euler summability method of Fourier series — 421

Pankaj Kumar, Raminder Pal Singh, and Dipesh

Modeling the effect of discrete delay in SIR epidemic model with logistic growth — 429

Pintu Bhattacharya

Simple harmonic motion in view of quantum calculus — 455

Ishfaq Nazir

On Bernstein and Turán-type inequalities for polynomials — 461

C. Jeslyn Sathya and Carmel Richard

A weak and strong form of $Ng * b$ -continuous function in nano topological space — 473

R. Singh, Suditi, M. K. Patel, N. Bhardwaj, and A. K. Singh

Securing networks with graph theory: an approach to cyber security — 483
