Preface	VII
The Author	IX
Contents	XI
1 Scientific Injection Molding – Advanced Steps toward Implementation	1
1.1 Introduction	1
1.2 Scientific Injection Molding or Injection with Advanced Methods – What Is It?	3
1.2.1 The Cultural Change Involved Moving from the Empirical to the Scientific Method.	3
1.2.2 Training and Applying Scientific Molding Tools	4
1.2.3 Some Definitions	5
1.2.4 Process Inputs and Outputs	7
1.2.5 New Tools for Process Definition.	11
1.2.6 Scientific Injection Molding or Injection with Advanced Methods	15
1.3 Who Should Be Trained in This Methodology and Where?	17
1.4 Where to Apply Scientific Injection Molding	23
1.5 Failures in the Implementation of Scientific Injection Molding	25

2	Knowing Our Machines	29
2.1	The Injection Molding Machine.....	29
2.2	Clamping Unit	30
2.2.1	Clamping Force	31
2.2.2	Clamping Unit Systems	32
2.2.3	Theoretical Clamping Force Required	34
2.3	Injection Unit	36
2.4	Screw	38
2.4.1	The Screw–Barrel Mode of Action.....	39
2.4.2	The Rotational Movement of the Screw Mode of Action	40
2.5	The Pressure Multiplier.....	41
2.6	The Right Injection Molding Machine	44
3	Knowing the Reliability and Performance of Injection Molding Machines	49
3.1	Mold Filling Time Repeatability Test	50
3.2	Load Sensitivity Test.....	51
3.2.1	Machine Configuration for Carrying Out the Pressure Compensation Test	52
3.2.2	Spreadsheet for the Load Sensitivity Test	54
3.3	Delta P Test	55
3.4	Screw Tip/Check Ring Valve Sealing Test.....	60
3.4.1	Dynamic Test	61
3.4.2	Static Test	62
3.4.2.1	Injection Machine Configuration for Carrying Out the Screw Tip/Check Ring Valve Sealing Test.....	62
3.4.2.2	What about Hot Runners?	63
3.5	Injection-Speed Linearity Test	63
3.6	Screw Acceleration Test.....	66
3.7	Pressure Response Test	69
3.8	Other Tests	73
3.9	Application Diagram of Injection Molding Machine Reliability and Performance Tests	75

4	Understanding Plastic Materials	77
4.1	Classification and Properties of Plastics According to Molecular Structure	78
4.1.1	Amorphous Thermoplastics	78
4.1.2	Semi-Crystalline Thermoplastics	80
4.1.3	Elastomers	82
4.2	Classification of Thermoplastics According to Molecular Chain Form	83
4.2.1	Homopolymer	83
4.2.2	Copolymer	83
4.3	Rheology	84
4.3.1	Elastic Deformation	84
4.3.2	Viscosity	84
4.4	Glass Transition Temperature (T_g)	87
4.5	Melting Temperature (T_m)	88
4.6	Thermoplastics Behavior	89
4.7	Behavior under Load	91
4.7.1	Maxwell–Voigt Model	92
4.7.2	Creep and Relaxation	93
4.8	Thermodynamic Behavior of Plastics: PVT Graphs	95
4.8.1	Thermodynamics Definitions	95
4.8.2	PVT Graphs	95
4.8.2.1	Metering Phase: Plasticization, Melting	96
4.8.2.2	Injection Phase: Filling the Mold	96
4.8.2.3	Holding Pressure Phase	97
4.8.2.4	Cooling Phase	98
4.8.3	Main Points of the PVT Graph	98
4.8.4	Main Effects and Properties of Each Injection Molding Phase on the Material	99
4.8.5	Influence of Injection Molding Parameters Reflected in PVT Graphs	101
4.9	Crystallization Phases	105
4.9.1	Defects or Errors Caused during the Crystallization Phase	107
4.9.2	Degree of Crystallization, an Injection Molding Technician’s Responsibility	108

5	Required Information for Defining the Process	109
5.1	Plastics Properties: Data Sheet Interpretation	109
5.1.1	Examples of Data Sheets	110
5.1.2	Density	111
5.1.3	Material Flow Rates	112
5.1.3.1	Melt Volume Index (MVI)	113
5.1.3.2	Melt Flow Index (MFI)	113
5.1.3.3	Comparing Materials' Fluidity	115
5.1.4	Melting Temperatures	116
5.1.5	Mechanical Properties	117
5.1.5.1	Tensile Stress and Mechanical Resistance	117
5.1.5.2	Elastic and Tensile Moduli	119
5.1.5.3	Impact Strength	120
5.1.6	Thermal Properties	120
5.1.6.1	Coefficient of Linear Thermal Expansion (CLTE)	120
5.1.6.2	Vicat Softening Temperature	121
5.1.6.3	Heat Deflection Temperature (HDT/HDTUL)	122
5.1.6.4	Critical Temperatures of Plastics	123
5.2	Part Information Checklist	124
5.2.1	Part Technical Specifications Checklist	126
5.2.2	Target Factor Value Checklist	127
5.3	Mold Information	128
5.3.1	Metals and Steels for Mold Construction	128
5.3.2	Runners	130
5.3.3	Cold Runner Design	130
5.3.4	Hot Runners	131
5.3.5	Torpedo and Cavity Isolation	132
5.3.6	Mold Cooling System Information	132
5.3.7	Venting Information	134
5.3.8	Draft Angles	137
5.4	Summary of Required Information	139

6	Necessary Equipment for Advanced Injection Molding	143
6.1	Importance of Technical Equipment	143
6.2	Technical Equipment for Injection Molding and the Application of Scientific Injection Molding	143
6.2.1	Raw Material, Pellets, Moisture Meter or Moisture Analyzer	144
6.2.2	Temperature Probe	145
6.2.3	Thermal Infrared Camera	145
6.2.4	Balance	146
6.2.5	Micrometer Caliper Gauge	146
6.2.6	Shore A, Shore D Durometer	146
6.2.7	Microscope	146
6.2.8	Surface Tension Measurement Inks	147
6.2.9	Polarized Lenses	147
6.2.10	Adjustable Magnifying Glasses	147
6.2.11	Gauges, Calibrated Rods of Different Diameters	147
6.2.12	Melt Flow Index Tester	148
6.2.13	Miscellaneous Equipment	148
7	Tools for Scientific Injection Molding	153
7.1	Preliminary Studies and Calculations	153
7.1.1	Estimation of the Theoretical Clamping Force Required	153
7.1.2	Screw Rotation, Maximum RPM and Peripheral Screw Speed	158
7.1.3	Metering Stroke or Volume Calculation	161
7.1.4	Theoretical Cooling Time	162
7.2	Scientific Injection Molding Tools for Defining the Injection Molding Process	163
7.2.1	Viscosity Curve Test or In-Mold Rheology Test	164
7.2.1.1	Plastic Behavior	164
7.2.1.2	Viscosity Curve (or In-Mold Rheology) Test	165
7.2.1.3	Relative Viscosity or In-Mold Rheology Test: Injection Machine Configuration	166
7.2.1.4	Influence of Melt Temperature on the Study	169
7.2.2	Injection-Speed Linearity Test	170
7.2.3	Mold Filling Balance Study	174
7.2.3.1	Filling Balance Study: Injection Machine Configuration	175
7.2.3.2	Spiral Effect	177

7.2.4	Optimal Injection Speed Selection	179
7.2.5	Mold Filling Study.....	184
7.2.5.1	Mold Filling Study: Injection Machine Configuration	185
7.2.5.2	Mold-Filling Study Procedure	186
7.2.6	Analysis of Injection Pressure Losses along the Filling System....	189
7.2.7	Delta P Determination and Study	192
7.2.8	Gate Sealing Study	196
7.2.8.1	Cavity Filling Analogy	196
7.2.8.2	Pack and Hold Stage.....	197
7.2.8.3	Gate Sealing Time.....	197
7.2.8.4	Gate Sealing Study: Injection Machine Configuration....	198
7.2.8.5	Molding with an Open or Sealed Gate?.....	200
7.2.8.6	What if the Part Weight does Not Stop Increasing?	200
7.2.8.7	What about Hot Runners or Valve Gate Nozzles?.....	202
7.2.9	Process Window Determination (for the Holding Pressure Phase)	203
7.2.9.1	Process Window Study: Injection Machine Configuration	204
7.2.9.2	Process Window Study: Steps	204
7.3	Further Scientific Molding Tools or Studies for Checking and Improving the Injection Molding Process	205
7.3.1	Shear Rate at the Gate Study	206
7.3.2	Cooling System Study.....	211
7.3.3	Cooling Time Study.....	214
7.3.4	Study of Material Residence Time in the Injection Unit	215
7.3.5	Filling Time Repeatability Study	218
7.3.6	Screw Tip or Check Ring Valve Sealing Study	219
7.3.6.1	Dynamic Test Study	221
7.3.6.2	Static Test Study	222
7.3.6.3	What about Hot Runners?	222
7.4	Scientific Injection Molding Tools Application Diagram	223
7.4.1	Logical Sequence of Application	223
7.4.1.1	Preliminary Studies and Calculations	223
7.4.1.2	Tools for Defining the Injection Molding Process.....	223
7.4.1.3	Further Tools for Checking and Improving the Injection Molding Process	224
7.4.2	Logical Sequence of Application Diagrams.....	225

7.4.2.1	Preliminary Studies and Calculations	225
7.4.2.2	Tools for Defining the Injection Molding Process	226
7.4.2.3	Further Tools for Checking and Improving the Injection Molding Process	227
8	Top Ten Key Parameters in the Definition of the Injection Molding Process	229
8.1	Injection Speed	229
8.2	Melt Temperature	234
8.2.1	Influence of the Melt Temperature	235
8.2.2	Residence Time	236
8.3	Peripheral Screw Speed	237
8.4	Back Pressure	238
8.5	Injection Pressure	239
8.6	Switchover Point	241
8.7	Holding Pressure	243
8.7.1	Defining the Holding Pressure Time	245
8.7.2	Sealed or Open Gate?	247
8.8	Mold Temperature	247
8.9	Metering	249
8.10	Cushion	249
8.11	Other Key Aspects	250
8.11.1	Melt Preparation	250
8.11.1.1	Throat and Tracking Temperature	250
8.11.1.2	Decompression Stroke and Speed	251
8.11.1.3	Back Pressure	252
8.11.2	Machine Input Settings and Process Outputs	252
8.11.2.1	Parameter Data Sheets	252
8.11.2.2	Process Outputs	254
8.11.3	Process Tolerances	255
9	Process Portability, DOE (Design of Experiments), Mold Qualification and Process Validation	257
9.1	Process Portability	257
9.1.1	Portability	258
9.1.1.1	The Specific Units	259

9.1.1.2	The Essential Outputs	260
9.1.1.3	Important Process Inputs or Settings.....	261
9.1.2	Portability of Injection Speed Profile Switchover Points.....	262
9.1.3	Portability of Injection Pressures	263
9.1.3.1	Why is it Important to Know the Intensification Ratio? ..	265
9.1.3.2	Hydraulic Pressure to Specific Pressure Conversions	266
9.1.4	Process Portability Format and Checklist	267
9.2	Introduction to DOE (Design of Experiments)	269
9.2.1	Factors	269
9.2.2	Responses	270
9.2.3	Levels	270
9.2.4	Number of Experiments	270
9.2.5	Experiment Matrix	271
9.2.6	Injection Molding Factors or Parameters	272
9.2.7	Levels for Each Factor Selected	274
9.2.7.1	Melt Temperature.....	274
9.2.7.2	Injection Speed (Filling Time)	274
9.2.7.3	Packing and Holding Pressure.....	274
9.2.7.4	Holding Pressure Time	275
9.2.7.5	Mold Temperature	275
9.2.7.6	Cooling Time	275
9.2.8	Example of Experiment Matrix	276
9.3	Consistent and Robust Process through Experimentation and Testing	277
9.4	Scientific Process Flowchart for Mold Qualification and Process Validation.....	279
10	Melt Preparation	283
10.1	Parameters that Influence Melt Quality	283
10.2	Barrel Temperature Profile.....	284
10.3	Throat Temperature	285
10.4	Peripheral Screw Speed.....	287
10.5	Back Pressure.....	289
10.5.1	Effects of Back Pressure.....	289
10.5.2	Optimal Back Pressure Test	290
10.6	Decompression or Suction	290

11 Process Variability, Self-Adaptation, and Corrections..... 293

11.1 The Plastic Injection Process, Self-Adaptation to the Process Variability .. 293

11.1.1 Mold Filling in the Dynamic Injection Phase 294

11.1.2 The Filling, Packing and Holding Phase..... 294

11.2 Deviations from the Original Process Checks and Corrections 295

11.2.1 Checks To Be Carried Out in the Dynamic Filling Phase 295

11.2.2 Checks To Be Carried Out during the Holding Pressure Phase 296

11.2.3 Differences to Check with Cavity Pressure Sensors 297

11.2.4 Scientific Troubleshooter 297

11.2.5 Steps for Analyzing Deviations in the Injection Molding Process 298

12 Data To Be Collected for the Calculation and Performance of a Scientific Injection Molding Process Methodology 301

12.1 Data To Be Collected for Developing the Preliminary Studies and Calculations 301

12.2 Data To Be Collected for the Tests and Studies on the Reliability and Performance of Injection Molding Machines..... 302

12.3 Data To Be Collected for Scientific Injection Molding Methodology Tests and Studies 303

12.4 Data To Be Collected for the Tests and Studies of Further Scientific Molding Tools or Checking and Improving the Injection Molding Process 305

12.5 Data To Be Collected for Process Portability Tests and Studies 306

12.6 General Table for Injection Molding Tool Selection According to Different Objectives and Situations 307

13 Reference Data Tables 311

13.1 Maximum Residence Time 311

13.2 Usual Mold Temperatures..... 312

13.3 Shrinkage 313

13.4 Drying Conditions..... 314

13.5 Maximum Allowed Moisture Data 315

13.6 Recommended Depth of Venting Channels..... 316

13.7 Mold and Melt Temperatures, Shear, Etc. 317

13.8 Maximum Peripheral Speeds..... 318

13.9 Density, Melt and Room Temperature 319

Bibliography 321

Glossary 323
