Preface *xi*

About the Editors *xv*

Part I Fundamentals 1

1	Fundamental Understandings of Superamphiphobicity	3
	<i>Hui Liu, Qing Xu, Chengyuan Zhang, Jianying Huang, and Yuekun Lai</i>	
1.1	Natural Creatures with Special Wettability	3
1.2	Characterization of Wettability	4
1.2.1	Static Contact Angle	4
1.2.2	Contact Angle Hysteresis	6
1.3	The Mechanism for Superamphiphobicity	7
1.3.1	Chemical Composition	7
1.3.2	Special Rough Morphology	12
1.4	Summary and Outlook	15
	Acknowledgments	15
	References	16
2	Mechanical Durability of Superamphiphobic Surfaces: Fundamentals	21
	<i>Lin Liu and Pu Mingjie</i>	
2.1	Introduction	21
2.2	Theory of Wetting	22
2.2.1	Wetting Parameters	22
2.2.2	Wetting Models	22
2.2.3	Categories of Superamphiphobic Mechanical Durability	23
2.3	Mechanical Durability Influenced by Key Parameters	24
2.3.1	Wear Resistance	24
2.3.2	Coating Adhesion	26
2.3.3	Impact Toughness	27
2.4	Common Characterization Methods for Mechanical Durability	27

2.4.1	Nanoscratching Test	27
2.4.2	Abrasion Test	29
2.4.3	Impact Test	30
2.4.4	Washing Test	31
2.4.5	Tape Stripping Test	33
2.5	Strategies to Improve Mechanical Durability	33
2.5.1	Stable Construction to Enhance Mechanical Durability	33
2.5.2	Surface Chemical Modulation to Improve Mechanical Durability	35
2.5.3	Enhancing Binding Force between Substrate and Coating	35
2.5.4	Using Multifunctional Coatings to Strengthen Mechanical Durability	36
2.6	Summary and Outlook	38
	References	39

Part II Fabrication 43

3	Advanced Techniques for Fabrication of Superamphiphobic Surfaces	45
	<i>Sanjay S. Latthe, Akshay R. Jundle, Pradip P. Gaikwad, Sagar S. Ingole, Rutuja A. Ekunde, Rajaram S. Sutar, Ruimin Xing, and Shanhu Liu</i>	
3.1	Introduction	45
3.2	Fabrication Methods	46
3.2.1	Spray Coating Strategies	46
3.2.2	Electrospinning	51
3.2.3	Etching	53
3.2.4	Lithography	56
3.2.5	Dip Coating	58
3.2.6	Sol-gel Method	62
3.2.7	Template-assisted Synthesis	66
3.3	Conclusion	69
	Acknowledgments	69
	References	70
4	Superamphiphobic Polymeric Surfaces: Progress and Advances in Fabrication Methods	75
	<i>Irshad Kammakakam and Abubakkar Saddeeq</i>	
4.1	Introduction	75
4.2	The Fabrication of Superamphiphobic Polymeric Surfaces	78
4.2.1	Post-modification of Pre-roughened Substrates	78
4.2.2	Post-roughness of Pre-modified Substrates	86
4.2.3	Introducing Surface Superamphiphobicity in a Single Step	88
4.3	Conclusion and Perspectives	90
	References	91

5	Superamphiphobic Surfaces Based on Natural Nanomaterials	97
	<i>Junping Zhang, Bucheng Li, Jian Lin, and Jinfei Wei</i>	
5.1	Introduction	97
5.2	Superamphiphobic Surfaces Based on Natural Clay Minerals	98
5.2.1	Attapulgite	99
5.2.2	Halloysite Nanotubes	104
5.2.3	Kaolin	106
5.2.4	Montmorillonite and Other Clay Minerals	108
5.3	Superamphiphobic Surfaces Based on Natural Polymeric Nanomaterials	109
5.4	Superamphiphobic Surfaces Based on Other Natural Materials	111
5.5	Advantages and Challenges	113
5.6	Prospects and Outlook	114
	References	115
6	Superamphiphobic Fabrics	123
	<i>Ning Tian and Junping Zhang</i>	
6.1	Introduction	123
6.2	Design Principles of Superamphiphobic Fabrics	124
6.2.1	Design of Low Surface Energy Materials	124
6.2.2	Design of Surface Structures	125
6.3	Fabrication Methods of Superamphiphobic Fabrics	126
6.3.1	Dip-coating	126
6.3.2	Spray-coating	128
6.3.3	Chemical/Plasma Etching	129
6.3.4	Chemical Vapor Deposition	130
6.4	Testing of Superamphiphobic Fabrics	131
6.5	Functional Applications of Superamphiphobic Fabrics	132
6.5.1	Self-cleaning	132
6.5.2	Flame Retardancy	133
6.5.3	Protective Clothing	134
6.5.4	Antibacterial Properties	136
6.5.5	Oil–Water Separation	137
6.5.6	Antifouling	137
6.6	Challenges and Perspectives	138
	References	139
7	Superamphiphobic Surfaces by Electrochemical Processes	145
	<i>Frédéric Guittard and Thierry Darmanin</i>	
7.1	Introduction	145
7.2	Chemical Etching	146
7.3	Anodizing	148
7.4	Electrodeposition	149
7.4.1	Metals	149
7.4.2	Conducting Polymers (Electropolymerization)	154
7.5	Conclusion	158
	References	159

Part III Performances 163

8	Mechanically Durable Superamphiphobic Surfaces 165
	<i>Youfa Zhang, Yage Xia, and Xuan Jiao</i>
8.1	Introduction 165
8.2	Enhancement Strategies of Superamphiphobic Surface 167
8.2.1	Organic/Inorganic Binder Reinforcement Superamphiphobic Surface 167
8.2.2	Self-similar Structure Superamphiphobic Surface 170
8.2.3	Framework Structure of a Superamphiphobic Surface 170
8.2.4	Self-repairing Superamphiphobic Surface 172
8.2.5	Coupling Hardness with Softness Superamphiphobic Surface 174
8.3	Conclusion and Future Perspectives 177
	References 178
9	Impalement-resistant Superamphiphobic Surfaces 181
	<i>Bucheng Li and Junping Zhang</i>
9.1	Introduction 181
9.2	Impalement-resistant Superamphiphobic Surfaces 182
9.2.1	Special Structures 182
9.2.2	Surface Chemical Enhancement 188
9.3	Applications of Impalement-resistant Superamphiphobic Surfaces 191
9.3.1	Self-cleaning 191
9.3.2	Corrosion Resistance 191
9.3.3	Anti-icing 192
9.3.4	Antibacterial and Antifouling 194
9.3.5	Microfluidic Manipulation 194
9.4	Conclusion and Perspectives 195
	References 196
10	Self-healing Superamphiphobic Surfaces 201
	<i>Binbin Zhang</i>
10.1	Introduction 201
10.2	Self-healing Methods and Mechanisms 202
10.2.1	Self-healing of Low-surface Energy Substances 202
10.2.2	Releasable Capsule Self-healing 205
10.2.3	Shape-memory Polymer Self-healing 206
10.2.4	Dynamic Reversible Molecular Self-healing 208
10.3	Conclusion and Outlooks 210
	Acknowledgments 212
	Conflict of Interest 212
	References 212

Part IV	Applications	217
11	Superamphiphobic Surfaces for Anti-icing and De-icing	219
	<i>Longquan Chen, Yile Wang, Minglu Dai, Ran Tao, and Yakang Jin</i>	
11.1	Static and Dynamic Wetting on Superamphiphobic Surfaces	219
11.1.1	Static Wetting on Superamphiphobic Surfaces	219
11.1.2	Wetting Dynamics on Superamphiphobic Surfaces	221
11.2	Icing and Frosting Phenomena on Solid Surfaces	227
11.2.1	Fundamentals of Droplet Freezing on Solid Surfaces	227
11.2.2	Anti-icing Performance of Superamphiphobic Surfaces	230
11.2.3	Antifrosting Function of Superamphiphobic Surfaces	233
11.3	Ice Adhesion on Superamphiphobic Surfaces	235
11.3.1	Test Methods	235
11.3.2	Icephobic Performance of Superamphiphobic Surfaces	236
11.4	Concluding Remarks	239
	References	240
12	Superamphiphobic Surfaces for Self-cleaning and Antifouling	249
	<i>Parinaz Salehikahrizsangi and Mohamad Reza Nasresfahani</i>	
12.1	Introduction	249
12.2	Superamphiphobic Surfaces for Antifouling	250
12.2.1	Marine Equipments	250
12.2.2	Separation Membranes	251
12.2.3	Food Industry	253
12.2.4	Clean Energy Transitions	253
12.2.5	Oil and Gas Industry	254
12.3	Superamphiphobic Surfaces for Self-cleaning	255
12.3.1	Optical Devices	255
12.3.2	Medical Equipment	255
12.3.3	Outdoor Surfaces	257
12.3.4	Self-cleaning Fabrics	257
12.4	Current Status and Future Research Directions	257
	References	258
13	Superamphiphobic Surfaces for Corrosion Protection	263
	<i>Jian Li, Xuerui Zhao, Wei Zhang, and Kefan Huang</i>	
13.1	Introduction	263
13.2	Applications of Superamphiphobic Surfaces in Corrosion Protection	264
13.2.1	Superamphiphobic Surfaces for Metal Corrosion Protection	265
13.2.2	Superamphiphobic Surfaces for Building Material Corrosion Protection	270
13.2.3	Superamphiphobic Surfaces for Fabric Corrosion Protection	274
13.2.4	Superamphiphobic Surfaces for Other Substrate Corrosion Protection	279
13.3	Conclusion and Outlook	281
	References	282

- 14 Superamphiphobic Surfaces for the Sustained Maintenance of Building Materials 289**
Yijian Cao, Cong Wang, Hongyi Chen, and Mara Camaiti
 - 14.1 Building Materials Degradation 289
 - 14.1.1 Phenomena and Mechanisms 289
 - 14.1.2 The Damaging Effects of Water and Water Inhibition 291
 - 14.2 Superamphiphobic Surfaces for Building Materials 292
 - 14.2.1 Considerations and Requirements Concerning Historical Buildings and Stone Artifacts 292
 - 14.2.2 Superamphiphobic Surfaces for Building Materials 293
 - 14.3 Key Bottlenecks and Improvement Strategies 297
 - 14.3.1 Key Bottlenecks 297
 - 14.3.2 Improvement Strategies 301
 - 14.4 Conclusion and Perspective 308
 - Acknowledgments 308
 - References 309

Part V Challenges and Prospects 313

- 15 Current Challenges and Prospects in Superamphiphobic Surfaces Technology 315**
Wanshun Deng, Rui Guo, and Shuaijun Pan
 - 15.1 Introduction 315
 - 15.2 Main Challenges of Current SAP Materials 316
 - 15.2.1 Limitations of Current Wetting Model 316
 - 15.2.2 Negative Impacts of Perfluorinated Compounds 317
 - 15.2.3 Mechanical Fragility 319
 - 15.2.4 Chemical Instability 321
 - 15.2.5 Challenges in Scalable Production 323
 - 15.2.6 Other Problems 323
 - 15.3 Future Prospects 325
 - 15.3.1 Utilizing Advanced Technologies in the Development of SAP Materials 325
 - 15.3.2 Environment-friendly Production of SAP Surfaces 327
 - 15.3.3 Stable and Healable SAP Surfaces 328
 - 15.3.4 Interdisciplinary Applications 330
 - 15.4 Conclusion 332
 - Author Contributions 333
 - Acknowledgments 333
 - References 333
