

Contents

1	Multipliers, invariants and conservation laws — 1
1.1	The Laplace equation and the conformal transformation group — 1
1.1.1	Translation transformations — 3
1.1.2	Rotation transformations — 4
1.1.3	Dilation transformations — 4
1.1.4	Inversion transformations — 7
1.2	The multiplier method and general transformation group — 8
1.2.1	The Morawetz–Pohožaev identity — 10
1.2.2	Laplacian-invariant transformations — 12
1.2.3	Applications — 15
1.3	The invariants of the nonlinear wave and Klein–Gordon equations — 17
1.3.1	Time translation — 18
1.3.2	Space translation — 19
1.3.3	Spatial rotation — 19
1.3.4	Lorentz transform — 20
1.3.5	Dilation — 20
1.3.6	The inversion transformation — 21
1.3.7	Morawetz identity — 23
1.4	The Lagrangian method and its applications on wave/dispersive equations — 25
1.4.1	General theory — 26
1.4.2	Application on Klein–Gordon/wave equations — 33
1.4.3	Application on NLS and the Hartree equation — 37
2	The integrality, uniqueness, and the regularity of weak solutions — 46
2.1	Preliminaries, linear estimates, and their applications — 47
2.2	The existence of weak solutions — 61
2.3	The uniqueness and regularity — 67
3	Smooth solutions of semilinear wave equations — 87
3.1	Problems, statements, and the reduction of proof — 88
3.2	Energy estimate and the subcritical case — 94
3.3	Decay estimate and the critical case — 97
3.4	Regularity of solutions to the Cauchy problem of wave equations in high dimensions — 109
4	Global well-posedness and scattering for the energy solution of critical nonlinear wave equation — 130
4.1	The Morawetz estimate and global well-posedness for the energy solution — 130

4.1.1	Step 1: local existence —	131
4.1.2	Step 2: uniqueness —	135
4.1.3	Step 3: energy identity —	136
4.1.4	Step 4: energy flux and Morawetz —	138
4.1.5	Step 5: nonconcentration of energy —	147
4.1.6	Step 6: completion of proof —	150
4.2	The space-time estimate and scattering for the energy solution —	151
4.2.1	Global space-time estimate —	151
4.2.2	Scattering and the wave operator —	157
4.2.3	Continuity of wave operators —	159
4.2.4	Inverse wave operators —	162
4.3	Energy solutions for the wave and Klein–Gordon equation —	166
5	Scattering theory for the subcritical nonlinear Klein–Gordon and Schrödinger equations —	180
5.1	Introduction —	180
5.2	A new Morawetz-type estimate —	186
5.3	Global space-time estimate I —	223
5.3.1	Work space —	223
5.3.2	Start of proof —	233
5.3.3	Key estimate I: weighted distribution of space-time norms —	239
5.3.4	Key estimate II: space-time energy localization —	244
5.3.5	Key estimate III: decoupling of the localized energy —	247
5.3.6	Perturbation theory —	254
5.3.7	Energy induction —	260
5.4	Global space-time estimate II —	263
5.4.1	Work spaces —	264
5.4.2	Preliminary results —	267
5.4.3	Global integrability —	270
5.5	Scattering —	275
5.5.1	Existence of wave operators —	275
6	Scattering theory for the critical Klein–Gordon equation —	280
6.1	Introduction —	280
6.1.1	Strategy: Bourgain’s induction on energy —	281
6.1.2	Features of Klein–Gordon equation —	282
6.1.3	Notations and function spaces —	283
6.2	Accumulation of space-time norm implies the accumulation of energy —	289
6.3	Local space-time estimate —	295
6.4	Global space-time estimate —	307
6.5	Scattering —	338

7	Inward/outward energy theory — 344
7.1	Introduction — 344
7.1.1	Motivation — 344
7.1.2	Assumptions — 348
7.1.3	Notations and preliminary results — 350
7.2	Energy flux of inward/outward energy — 353
7.2.1	Physical interpretation — 355
7.2.2	Morawetz estimates — 357
7.2.3	Proof of energy flux formula — 359
7.3	Basic theory of inward/outward energy — 363
7.3.1	Notations — 364
7.3.2	Cone law and Morawetz estimates — 365
7.3.3	Proof of main result — 368
7.3.4	An application on the energy-critical equation — 371
7.4	Weighted Morawetz estimates — 374
7.4.1	The classic case — 374
7.4.2	The boundary case — 379
7.4.3	Decay of potential term — 380
7.4.4	Energy concentration around the light cone — 382
7.5	Scattering by weighted energy — 386
7.5.1	The intermediate case — 387
7.5.2	The conformal case — 395
8	Radial solutions to energy subcritical wave equations — 402
8.1	Introduction — 402
8.1.1	Radial solutions in dimension three — 403
8.1.2	Radial solutions in higher dimensions — 404
8.1.3	Assumptions — 405
8.2	Method of characteristic lines — 405
8.2.1	Preliminary results — 406
8.2.2	Energy flux — 408
8.2.3	Asymptotic behavior by characteristic lines — 410
8.3	Radiation fields and scattering with weighted energy — 414
8.3.1	Exterior scattering — 414
8.3.2	Scattering with a weighted energy — 418
8.3.3	More on radiation fields — 420
8.4	Exterior scattering of nonradial solutions — 424
9	Appendix — 434
9.1	An introduction to compactness-rigidity argument — 434
9.2	Function spaces and embedding — 444
9.3	Sobolev embedding and dilation — 450

VIII — Contents

9.4	Understanding the interpolation, multiplier, and embedding relationships by smoothness scale —	454
9.5	Morrey-type spaces and the John–Nirenberg-type potential estimates —	461
9.6	Applications of Sobolev’s embedding to PDEs —	470

Bibliography — 473

Index — 477
