Foreword 1 — VII

Foreword 2 — IX

- 1 Introduction — 1**
- 2 Several definitions and statements of Mathematics with Observers — 3**
- 3 Observability and geometry: points, straight lines, planes, and spaces — 11**
- 4 Observability and analysis of connections of points, straight lines, and planes — 20**
 - 4.1 First property of connections — 20
 - 4.2 Second property of connections — 28
 - 4.3 Third property of connections — 40
 - 4.4 Fourth property of connections — 46
 - 4.5 Fifth property of connections — 47
 - 4.6 Sixth property of connections — 49
 - 4.7 Seventh property of connections — 51
 - 4.8 Point and line theorem — 55
 - 4.9 Line and plane theorem — 65
- 5 Observability and properties of points order analysis — 77**
 - 5.1 First property of points order — 81
 - 5.2 Second property of points order — 82
 - 5.3 Third property of points order — 84
 - 5.4 Fourth property of points order — 86
 - 5.5 Fifth property of points order — 87
 - 5.6 Number of points theorem — 89
 - 5.7 Line and regions theorem — 90
 - 5.8 Polygon and regions theorem — 104
 - 5.9 Plane and regions theorem — 116
- 6 Observability and properties of parallel straight lines — 129**
 - 6.1 Parallel lines theorem — 133
 - 6.2 Euclid's axiom — 135
 - 6.3 Gauss–Bolyai–Lobachevsky axiom — 144
 - 6.4 Riemann axiom — 154
 - 6.5 Observability and geometry: the main parallel lines theorem — 157

7	Observability and properties of congruence analysis — 196
7.1	First property of congruence — 210
7.2	Second property of congruence — 213
7.3	Third property of congruence — 213
7.4	Angle in Observer's geometry. First statement — 217
7.5	Angle in Observer's geometry. Second statement — 220
7.6	Fourth property of congruence — 224
7.7	Fifth property of congruence — 235
7.8	Sixth property of congruence — 248
7.9	Right angles theorem — 263
7.10	Alternate angles theorem — 266
8	Analysis of observability and property of continuity (Archimedes' axiom) — 270
9	Observability and triangle — 272
9.1	Definition of congruence of triangles in Mathematics with Observers geometry: variant of vertices — 273
9.2	Definition of congruence of triangles in Mathematics with Observers geometry: variant of sides — 280
9.3	Triangles formed by two perpendiculars to one line — 283
9.4	Statement 1. First theorem of congruence for triangles — 286
9.5	Statement 2. Second theorem of congruence for triangles — 290
9.6	Statement 3. Third theorem of congruence for triangles — 297
9.7	Isosceles triangles — 300
9.8	Similar triangles — 308
9.9	Pascal's theorem — 316
9.10	Desargues's theorem — 320
10	Observability and triangles. Special cases — 330
10.1	Angle bisector of triangle theorem — 330
10.2	Middle of segment, median, gravitation center of triangle — 338
10.3	Vertices and sides of triangle — 353
10.4	The center of a circumscribed circle of a triangle — 359
10.5	The orthocenter of a triangle — 364
10.6	The center of inscribed circle of triangle — 367
10.7	Special equilateral triangle — 393
10.8	Amazing triangle — 399
10.9	The length of segment — 403
10.10	Midsegments of a triangle — 412

11 Observability and planes, lines, and vectors — 416

11.1 Plane and vectors — **416**

11.2 Line and vectors — **418**

Bibliography — 423

Index — 425
