### **Preface**   *xvii*

<b>1</b>	<b>Corrosive Environments and Types of Steel</b>	<b>1</b>
1.1	Introduction	1
1.2	Natural Corrosive Environments	1
1.2.1	Atmospheric Corrosive Environments	1
1.2.2	Soil Corrosion Environments	2
1.2.3	Natural Water-Corrosive Environment	4
1.3	Industrial Corrosive Environments	6
1.3.1	Corrosive Environments in the Petroleum Industry	6
1.3.2	Corrosive Environments in the Chemical Industry	7
1.3.3	Corrosive Environments in the Nuclear Power Industry	7
1.4	Uniform Corrosion and Localized Corrosion	8
1.4.1	Uniform Corrosion	9
1.4.2	Pitting Corrosion	9
1.4.2.1	Definition and Characteristics of Pitting	9
1.4.2.2	Morphology and Conditions of Pitting	10
1.4.2.3	Pitting Mechanism	11
1.4.3	Crevice Corrosion	12
1.4.3.1	Definition and Characteristics of Crevice Corrosion	12
1.4.3.2	Gap Formation	13
1.4.3.3	Characteristics of Crevice Corrosion	13
1.4.3.4	Crevice Corrosion Mechanism	13
1.4.4	Galvanic Corrosion	14
1.4.4.1	Definition and Characteristics of Galvanic Coupling Corrosion	14
1.4.4.2	Electric Coupling Sequence	14
1.4.4.3	Galvanic Currents and Galvanic Corrosion Effects	15
1.4.5	Intergranular Corrosion	16
1.4.5.1	Definition and Characteristics of Intergranular Corrosion	16
1.4.5.2	Causes of Intergranular Corrosion	16
1.4.5.3	Intergranular Corrosion Mechanism	16
1.5	Corrosion Under Stress	18
1.5.1	Stress Corrosion Cracking	18

1.5.1.1	Definition and Characteristics of Stress Corrosion Cracking	18
1.5.1.2	Conditions and Characteristics of SCC Occurrence	18
1.5.1.3	SCC Mechanism	19
1.5.2	Hydrogen Cracking	20
1.5.2.1	Definition of Hydrogen Cracking	20
1.5.2.2	Behavior of Hydrogen in Metals	21
1.5.2.3	Classification of Hydrogen Cracking	22
1.5.2.4	Mechanism of Hydrogen Cracking	23
1.5.3	Corrosion Fatigue	27
1.5.3.1	Definition of Corrosion Fatigue	27
1.5.3.2	Characteristics of Corrosion Fatigue	27
1.5.3.3	Corrosion Fatigue Mechanism	28
1.5.4	Wear-Related Corrosion	29
1.5.4.1	Erosion by Washing Away and Corrosion	29
1.5.4.2	Cavitation	30
1.5.4.3	Corrosion and Wear	31
1.6	Corrosion in the Natural Environment	32
1.6.1	Atmospheric Corrosion	32
1.6.1.1	Definition and Characteristics of Atmospheric Corrosion	32
1.6.1.2	Classification of Atmospheric Corrosion	33
1.6.1.3	Atmospheric Corrosion Mechanism	34
1.6.2	Soil Corrosion	36
1.6.2.1	Definition and Characteristics of Soil Erosion	36
1.6.2.2	Electrode Processes in Soil Corrosion	36
1.6.2.3	Corrosion Batteries in the Soil	37
1.6.3	Freshwater and Saltwater Corrosion	39
1.6.3.1	Freshwater Corrosion	39
1.6.3.2	Sea Water Corrosion	41
1.7	Chapter Summary	44
	References	46
<b>2</b>	<b>Microelectrochemical Mechanisms of Pitting Corrosion Induced by Inclusions in Stainless Steel</b>	<b>49</b>
2.1	Introduction	49
2.2	Mechanism of on the MnS—Te Localized Corrosion Resistance of 15-5PH Stainless Steel	50
2.2.1	Materials and Methods	50
2.2.1.1	Materials	50
2.2.1.2	Characterization of Inclusions	50
2.2.1.3	Assessment of Regional Electrochemical Data	50
2.2.1.4	Electrochemical Analysis	50
2.2.1.5	XPS	50
2.2.1.6	Submersion Trial	51
2.2.2	Corrosion Behavior and Patterns	51
2.2.2.1	Microstructure Observation of Te Containing Steels	51

2.2.2.2	Measurement of Localized Electrochemical Information	52
2.2.2.3	Changes in Electrochemical Information for Te-Containing Steels	53
2.2.2.4	Compositional Changes in Passivation Films of Te-Containing Steels	55
2.2.2.5	Changes in Corrosion Morphology of Te Containing Steels	56
2.2.2.6	Process of Localized Corrosion Initiation Due to Non-metallic Particles	60
2.2.3	Explanation of How Te-Modified Inclusions Influence the Corrosion Resistance of 15-5PH Stainless Steel	62
2.3	Mechanism of the RE-Te Composite Inclusions Localized Corrosion Resistance of 316L Stainless Steel	63
2.3.1	Materials and Methods	63
2.3.1.1	Materials	63
2.3.1.2	Microstructure Observation	63
2.3.1.3	Micro-electrochemical Information Test	63
2.3.1.4	Electrochemical Analysis	64
2.3.1.5	Identification of the Passive Film's Constituent Elements	64
2.3.1.6	Submersion Trial	64
2.3.2	Corrosion Behavior of RE-Te Treated 316L Stainless Steel	64
2.3.2.1	Microstructure Observation of RE-Te Containing Steels	64
2.3.2.2	Electrochemical Data	66
2.3.2.3	Electrochemical Measurement of RE-Te Containing Steels	68
2.3.2.4	Detection of Passive Film Composition of RE-Te Containing Steels	70
2.3.2.5	Changes in Corrosion Morphology of RE-Te Containing Steels	75
2.3.3	Impact of RE/Te Treatment on the Anticorrosion Properties	79
2.4	Chapter Summary	81
	References	82
<b>3</b>	<b>Effect of Rare Earth on the Mechanism of Localized Corrosion Induced by Inclusions in Low-Alloy Steel</b>	<b>89</b>
3.1	Introduction	89
3.2	Mechanism of $\text{Al}_2\text{O}_3$ -Triggered Localized Corrosion in Q460NH Steel	90
3.2.1	Materials and Methods	90
3.2.1.1	Materials	90
3.2.1.2	Specimen Characterization	90
3.2.1.3	Immersion Test	90
3.2.1.4	Micro-electrochemical Information Testing	91
3.2.2	Corrosion Behavior Induced by $\text{Al}_2\text{O}_3$ Inclusions	91
3.2.2.1	Morphology of $\text{Al}_2\text{O}_3$ Inclusions in Steel	91
3.2.2.2	Microzonation Electrochemical Information of $\text{Al}_2\text{O}_3$ Inclusions	93
3.2.2.3	Early Corrosion Morphology of $\text{Al}_2\text{O}_3$ Inclusions Induced Corrosion	95
3.2.3	Mechanism of Localized Corrosion Induced by $\text{Al}_2\text{O}_3$ Inclusions	100
3.3	Mechanism of Localized Corrosion Induced by RE Modified Inclusion in Q460NH Steel	101
3.3.1	Materials and Methods	101

3.3.2	Corrosion Behavior Induced by RE-Treated Inclusion	102
3.3.2.1	Morphology of RE-Modified Inclusions in Steel	102
3.3.2.2	Micro-electrochemical Properties of RE-Modified Inclusion	104
3.3.2.3	Localized Corrosion Morphology Induced by RE-Modified Inclusions in the Early Corrosion Stage	110
3.3.3	Corrosion Mechanism Localized Corrosion Induced by RE-Modified Inclusions	117
3.4	Mechanism of Localized Corrosion Induced by Zr—Ti—RE-Regulated Inclusions in Q460NH Steel	120
3.4.1	Materials and Methods	120
3.4.2	Laws and Characteristics of Zr/Ti and RE-Modified Inclusions Induced Localized Corrosion	120
3.4.2.1	Characterization of Zr/Ti and RE-Modified Inclusions	120
3.4.2.2	Characterization of Early-Stage Corrosion	126
3.4.3	Mechanism of Localized Corrosion Triggered by Zr—Ti—RE-Modified Inclusions	128
3.5	Chapter Summary	130
	References	131
<b>4</b>	<b>Coupling Mechanism of Multicomponent Alloy Regulation Effect on Inclusion-Induced Localized Corrosion in Ca-Treated E690 Steel</b>	<b>135</b>
4.1	Introduction	135
4.2	Investigation into the Mechanism of Localized Corrosion Triggered by TiN Inclusions in E690 Steel	136
4.2.1	Materials and Methods	137
4.2.1.1	Sample Preparation	137
4.2.1.2	Microstructural Characterization	137
4.2.1.3	Micro-electrochemical Characterization	138
4.2.1.4	Immersion Tests	138
4.2.1.5	Thermodynamic Calculation	138
4.2.1.6	First-Principle Modeling	138
4.2.2	Laws and Characteristics of TiN-Containing Inclusions-Induced Localized Corrosion	139
4.2.2.1	Characterization of Typical Inclusions	139
4.2.2.2	Electrochemical Properties of Inclusions	139
4.2.2.3	Corrosion Morphology Observations	141
4.2.2.4	First – Principle Calculation	144
4.2.3	Mechnism of Corrosion Induced by TiN Inclusion	146
4.3	Mechanism of the Ca, Mg, Te Alloy Effect on the Localized Corrosion in E690 Steel	150
4.3.1	Material and Methods	150
4.3.1.1	Materials Preparation	150
4.3.1.2	Microstructure Characterization	152
4.3.1.3	Micro-electrochemical Experiments	152

4.3.2	Corrosion Behavior and Mechanism of Ca, Mg, Te-Alloyed E690 Steel	152
4.3.2.1	Characterization of Inclusions	152
4.3.2.2	MnTe <sub>x</sub> S <sub>(1-x)</sub> —MnS Composite Inclusions	154
4.3.2.3	(xMgO · yAl <sub>2</sub> O <sub>3</sub> )—MgS—MnS Composite Inclusions	161
4.3.2.4	Al <sub>2</sub> O <sub>3</sub> —MnS Composite Inclusions	161
4.4	Effect of Ca, Sb Elements on the Localized Corrosion Mechanism Induced by Inclusion in E690 Steel Under Tropical Marine Atmosphere	167
4.4.1	Materials and Methods	167
4.4.1.1	Materials	167
4.4.1.2	Microstructure and Inclusions Observation	168
4.4.1.3	Testing for Micro-electrochemical Information	169
4.4.1.4	Immersion Tests and <i>E</i> –pH Diagrams	170
4.4.2	Corrosion Behavior and Mechanism of Ca/Sb-Alloyed E690 Steel	170
4.4.2.1	Characterization of Microstructure	170
4.4.2.2	Characterization of Inclusion Morphology	170
4.4.2.3	Micro-electrochemical Characteristics of Inclusions	173
4.4.2.4	Analysis of Corrosion Morphology and <i>E</i> –pH Diagrams	175
4.5	Effect of Ca/Mg Elements on the Localized Corrosion by Inclusion of E690 Steel in Tropical Marine Atmosphere	178
4.5.1	Materials and Methods	178
4.5.2	Performance and Principle of Localized Corrosion Triggered by Inclusions	180
4.5.2.1	Characterization of Inclusions	180
4.5.2.2	Mechanism of Corrosion Induced by Typical MnS—Al <sub>2</sub> O <sub>3</sub> Composite Inclusions	181
4.5.2.3	Mechanism of Corrosion Induced by Typical Ca-Containing Inclusions	186
4.6	Summary of Microscopic Mechanism of Corrosion Initiation of Steel Triggered by Inclusions	196
4.6.1	Electrochemical Dissolution Mechanism	197
4.6.2	Chemical Dissolution Mechanism	198
4.6.3	Coupled Chemical Dissolution–Electrochemical Dissolution Mechanism	199
4.7	Chapter Summary	200
	References	202
<b>5</b>	<b>Effect of Microstructure Coarsening on the Corrosion Resistance of Steel</b>	<b>205</b>
5.1	Introduction	205
5.2	Influence of Microstructure on the Corrosion Resistance of E690 Steel	206
5.2.1	Materials and Methods	206
5.2.1.1	Material Preparation	206

- 5.2.1.2    Macroelectrochemical Testing    207
- 5.2.1.3    Corrosion Product Analysis    207
- 5.2.2       E690 Steel Microstructure Evolution    207
- 5.2.2.1    Effect of Process Changes on the Organization and Morphology of E690 Steel    207
- 5.2.2.2    Changes in the Electrochemical Behavior of E690 Steel    210
- 5.2.2.3    Observation of Corrosion Morphology of E690 Steel    214
- 5.2.3       Corrosion Mechanism    218
- 5.3         Influence of Microstructure on the Corrosion Resistance of X80 Steel    222
- 5.3.1       Materials and Methods    222
- 5.3.1.1    Coupling Specimen Preparation and Test Methods    222
- 5.3.1.2    Carburizing Specimen Preparation and Test Methods    223
- 5.3.1.3    Carburizing Specimen Preparation and Test Methods    225
- 5.3.2       Effect of Microstructure Regulation on the Corrosion Resistance Change of X80 Steel    227
- 5.3.2.1    Galvanic Coupling Corrosion of X80 Steel and Its Welded Joints Simulating Organization in Acidic Soil    227
- 5.3.2.2    Microzonation Electrochemical Study of the Effect of Degraded Pearlite on the Corrosion Behavior of X80 Steel    236
- 5.3.2.3    Electrochemical Study of Microzonation Phases of X80 Steel Weld Thermal Simulation Organization    242
- 5.3.2.4    Electrogalvanic Corrosion of X80 Steel and Its Welded Joint-Simulated Structures in Acidic Soil    251
- 5.3.2.5    Morphological Analysis of Immersion in Simulated Solutions of Eagle Lake Soil    255
- 5.4         Chapter Summary    256
- References    257
  
- 6         Coupled Mechanism of Inclusions and Microstructure Effect on Corrosion Initiation and Development in Steel    261**
- 6.1         Introduction    261
- 6.2         Influence of Microstructure on the Corrosion Resistance of 15-5PH Stainless Steel    262
- 6.2.1       Material and Methods    262
- 6.2.1.1    Material Preparation    262
- 6.2.1.2    Microstructure Observation    262
- 6.2.1.3    Electrochemical Analysis    262
- 6.2.1.4    X-Ray Photoelectron Spectroscopy    262
- 6.2.1.5    Immersion Test    263
- 6.2.2       Effect of Heat Treatment on the Passive Film on the Steel Surface    263
- 6.2.2.1    Effect of Microstructural Changes on the Corrosion Resistance    263
- 6.2.2.2    Measurement of Localized Electrochemical Information    266
- 6.2.2.3    Electrochemical Measurement of 15-5PH Stainless Steel    266

- 6.2.2.4 15-5PH Stainless Steel Passivation Film Composition Evolution Mechanism 270
- 6.2.2.5 Effect of Microstructural Changes on the Corrosion Morphology of 15-5PH Stainless Steel 272
- 6.2.3 Corrosion Mechanism 274
- 6.3 Influence of Microstructure on the Corrosion Resistance of Q460 Steel 277
  - 6.3.1 Materials and Methods 277
    - 6.3.1.1 Material Preparation 277
    - 6.3.1.2 Microstructure Observation 278
    - 6.3.1.3 Microcellular Electrochemical Information Testing 278
    - 6.3.1.4 Immersion Test 279
    - 6.3.1.5 Electrochemical Experiments 279
    - 6.3.1.6 Comparative Immersion Experiments 279
  - 6.3.2 Microstructure and Corrosion Resistance Change of Q460 Steel 280
    - 6.3.2.1 Competing Mechanisms in the Corrosion Process Induced by Inclusions and Pearlite 280
    - 6.3.2.2 Tissue Analysis and Observation of Thermal Simulation Samples 288
    - 6.3.2.3 Tissue Analysis of Samples Simulated by Welding Thermal Cycling 296
- 6.4 Chapter Summary 302
- References 303
  
- 7 Effect of Microalloying Elements on the Corrosion Resistance of E690 Steel 309**
  - 7.1 Introduction 309
  - 7.2 Effect and Underlying Mechanisms of Ca and Sb Elements on the Corrosion Resistance of E690 Steel in a Tropical Marine Atmosphere 310
    - 7.2.1 Materials and Methods 310
      - 7.2.1.1 Materials 310
      - 7.2.1.2 Macroelectrochemical Testing 311
      - 7.2.1.3 Accelerated Indoor Corrosion Test 312
      - 7.2.1.4 Corrosion Weight Loss and Morphological Observations 312
      - 7.2.1.5 Corrosion Product Analysis 313
    - 7.2.2 Chemical Composition and Microstructure 313
      - 7.2.2.1 Chemical Composition 313
      - 7.2.2.2 Microstructure Characterization 313
    - 7.2.3 Electrochemical Information and Corrosion Behavior 314
      - 7.2.3.1 Electrochemical Impedance Spectroscopy Characterization 314
      - 7.2.3.2 Corrosion Kinetics Analysis 316
      - 7.2.3.3 Observation of Rust Layer Morphology and Composition 317
    - 7.2.4 Exposure Experiment Analysis 325
      - 7.2.4.1 Macroscopic Corrosion Observation 325
      - 7.2.4.2 Corrosion Kinetics 326
      - 7.2.4.3 Observation of Rust Layer Morphology and Composition 327

7.3	New Understanding of the Formation and Protectiveness of Corrosion Product Film on Ca—Sb—Cr -Alloyed 690MPa Weathering Steel	331
7.3.1	Materials and Methods	331
7.3.1.1	Materials Preparation	331
7.3.1.2	Field Exposure Test	332
7.3.1.3	Characterization of CPF and the Corrosion Thermodynamics Analysis	332
7.3.2	Characterization of Basic Material Properties and Corrosion Behavior	333
7.3.2.1	Morphologies and Corrosion Kinetics	333
7.3.2.2	Cross-Sectional Morphology and Element Distribution of CPF	334
7.3.2.3	Characterization and Statistics of Corrosion Morphology	334
7.3.2.4	Phase Composition Analysis of CPF	336
7.3.3	Law of Ca—Sb—Cr Effect on the Rust Film of Alloyed 690MPa Weathering Steel	341
7.4	Chapter Summary	345
	References	346

<b>12</b>	<b>Influence of Shrinkage Defects on Corrosion Behavior and Mechanism of Ductile Iron Pipe</b>	<b>505</b>
12.1	Introduction	505
12.2	Study on the Influence Mechanism of Graphite and Defects on the Corrosion of Ductile Iron	506
12.2.1	Experimental Materials and Methods	506
12.2.1.1	Materials and Solutions	506
12.2.1.2	Material Characterization	506
12.2.1.3	Electrochemical Measurements	506
12.2.2	Investigation of the Impact of Shrinkage Defects	507
12.2.2.1	Microstructure Analysis	507
12.2.2.2	Electrochemical Behavior of Cast Iron with Shrinkage Defects	508
12.2.2.3	Immerse Test	509
12.2.2.4	Corrosion Process Simulation	512
12.2.3	Mechanism Analysis	513
12.3	Kinetics Study of Shrinkage Defects: In Situ Observation	516
12.3.1	Experimental Materials and Methods	516
12.3.1.1	Materials and Solutions	516
12.3.1.2	Material Characterization	516
12.3.1.3	In Situ Observation of Corrosion	516
12.3.2	Investigation of the Impact of Contraction Flaws on Corrosion Durability	517
12.3.2.1	Microstructure Observation	517
12.3.2.2	Delayed Corrosion of Shrinkage Defects	518
12.3.2.3	Corrosion Kinetics of Shrinkage Defects	519
12.3.2.4	Impact of Form and Dimensions on Corrosion	521
12.3.3	Corrosion Kinetics Analysis	523
12.4	Smart Corrosion Analysis and Lifespan Forecasting for Ductile Iron Pipeline Systems	525
12.4.1	Materials and Methods	525

- 12.4.1.1 Materials and Solutions 525
- 12.4.1.2 Periodic Cycle Experiment 525
- 12.4.1.3 Corrosion Big Data Acquisition 526
- 12.4.1.4 Data Collection and Analysis Method 526
- 12.4.2 Corrosion Analysis and Life Prediction 528
  - 12.4.2.1 Test Results and Visualization 528
  - 12.4.2.2 Corrosion Decision 533
  - 12.4.2.3 Interconnected Effects Among Environmental Factors 536
- 12.4.3 Analyzed and Discussed 542
  - 12.4.3.1 Applicability and Generalization of the CDM 542
  - 12.4.3.2 Temperature as a Key Factor in Corrosion 544
  - 12.4.3.3 Data Driven Corrosion Analysis 545
- 12.5 Chapter Summary 546
- References 547
