Preface.....	v
Symbols	vii
1. Introduction.....	1
1.1 Contributions of Chemical Engineering to the Carbon Dioxide Problem.....	3
2. Thermodynamic Phase Equilibrium	11
2.1 Liquid/Gas Systems	13
2.1.1 Characteristics of Pure Substances.....	13
2.1.2 Behavior of Binary Mixtures	19
2.1.3 Behavior of Ideal Mixtures	32
2.1.4 Real Behavior of Liquid Mixtures	39
2.2 Liquid/Liquid Systems	60
2.3 Solid/Liquid Systems.....	65
2.4 Sorption Equilibria.....	71
2.4.1 Single Component Sorption	71
2.4.2 Heat of Adsorption and Bonding	77
2.4.3 Multicomponent Adsorption	79
2.4.4 Calculation of Single Component Adsorption Equilibria.....	85
2.4.5 Prediction of Multicomponent Adsorption Equilibria	93
2.5 Enthalpy–Concentration Diagram	101
3. Fundamentals of Single-Phase and Multiphase Flow.....	117
3.1 Basic Laws of Single-Phase Flow	118
3.1.1 Laws of Mass Conservation and Continuity	118
3.1.2 Irrotational and Rotational Flow	119
3.1.3 The Viscous Fluid	120
3.1.4 Navier–Stokes, Euler, and Bernoulli Equations.....	120
3.1.5 Laminar and Turbulent Flow in Ducts	123
3.1.6 Turbulence.....	127
3.1.7 Molecular Flow	128
3.1.8 Falling Film on a Vertical Wall	130
3.2 Countercurrent Flow of a Gas and a Liquid in a Circular Vertical Tube.....	133

3.3 Similarity Hypothesis, Dimensional Analysis, and Dimensionless Numbers.....	134
3.4 Particulate Systems.....	136
3.5 Flow in Fixed Beds.....	139
3.6 Disperse Systems in a Gravity Field.....	141
3.6.1 The Final Rising or Falling Velocity of Single Particles.....	144
3.6.2 Volumetric Holdup (Fluidized Beds, Spray, Bubble and Drop Columns).....	149
3.7 Flow in Stirred Vessels.....	155
3.7.1 Macro-, Meso-, and Micromixing.....	162
3.7.2 Suspending, Tendency of Settling.....	165
3.7.3 Breakup of Gases and Liquids (Bubbles and Drops).....	168
3.7.4 Gas–Liquid Systems in Stirred Vessels	169
4. Balances, Kinetics of Heat and Mass Transfer	175
4.1 Introduction.....	175
4.2 Balances	176
4.2.1 Basics	176
4.2.2 Balancing Exercises of Processes Without Kinetic Phenomena.....	179
4.3 Heat and Mass Transfer.....	192
4.3.1 Kinetics.....	192
4.3.2 Heat and Mass Transfer Coefficients.....	196
4.3.3 Balancing Exercises of Processes with Kinetic Phenomena.....	211
5. Distillation, Rectification, and Absorption	231
5.1 Distillation	232
5.1.1 Fundamentals	232
5.1.2 Continuous Closed Distillation	242
5.1.3 Discontinuous Open Distillation (Batch Distillation).....	246
5.2 Rectification.....	251
5.2.1 Fundamentals	251
5.2.2 Continuous Rectification.....	254
5.2.3 Batch Distillation (Multistage).....	289
5.3 Absorption and Desorption.....	296
5.3.1 Phase Equilibrium	298
5.3.2 Physical Absorption	299
5.3.3 Chemical Absorption.....	306
5.4 Dimensioning of Mass Transfer Columns.....	310
5.4.1 Tray Columns.....	312
5.4.2 Packed Columns.....	329

6. Extraction	349
6.1 Phase Equilibrium.....	350
6.1.1 Selection of Solvent	352
6.2 Thermodynamic Description of Extraction	354
6.2.1 Single Stage Extraction	354
6.2.2 Multistage Crossflow Extraction.....	356
6.2.3 Multiple Stage Countercurrent Extraction	357
6.3 Equipment.....	361
6.3.1 Equipment for Solvent Extraction.....	361
6.3.2 Selection of the Dispersed Phase	365
6.3.3 Decantation (Phase Splitting).....	366
6.4 Dimensioning of Solvent Extractors.....	370
6.4.1 Two-Phase Flow.....	370
6.4.2 Mass Transfer	376
7. Evaporation and Condensation	385
7.1 Evaporators	386
7.2 Multiple Effect Evaporation	391
7.3 Condensers.....	399
7.4 Design of Evaporators and Condensers.....	401
7.5 Thermocompression	406
7.6 Evaporation Processes	409
8. Crystallization	413
8.1 Fundamentals and Equilibrium.....	413
8.1.1 Fundamentals	414
8.1.2 Equilibrium.....	417
8.2 Crystallization Processes and Devices	418
8.2.1 Cooling Crystallization	418
8.2.2 Evaporative Crystallization	419
8.2.3 Vacuum Crystallization.....	420
8.2.4 Drowning-Out and Reactive Crystallization.....	420
8.2.5 Crystallization Devices	422
8.3 Balances	432
8.3.1 Mass Balance of the Continuously Operated Crystallizer	432
8.3.2 Mass Balance of the Batch Crystallizer	436
8.3.3 Energy Balance of the Continuously Operated Crystallizer	438
8.3.4 Population Balance.....	441
8.4 Crystallization Kinetics	444
8.4.1 Nucleation and Metastable Zone.....	444
8.4.2 Crystal Growth	454
8.4.3 Aggregation and Agglomeration.....	460
8.4.4 Nucleation and Crystal Growth in MSMPR Crystallizers	470
8.5 Design of Crystallizers	473

9. Adsorption, Chromatography, Ion Exchange	483
9.1 Industrial Adsorbents.....	483
9.2 Adsorbers.....	487
9.3 Sorption Equilibria.....	493
9.4 Single and Multistage Adsorber	496
9.4.1 Single Stage.....	496
9.4.2 Crossflow of Stages.....	497
9.4.3 Countercurrent Flow	499
9.5 Adsorption Kinetics.....	501
9.5.1 Simplified Models of Fixed Beds	507
9.5.2 Simplified Solution for a Single Pellet.....	514
9.5.3 Transport Coefficients.....	518
9.5.4 The Adiabatic Fixed Bed Absorber.....	524
9.6 Regeneration of Adsorbents	530
9.7 Adsorption Processes.....	534
9.8 Chromatography	536
9.8.1 Equilibria.....	537
9.8.2 Theoretical Model of the Number N of Stages.....	540
9.8.3 Chromatography Processes	550
9.8.4 Industrial processes	551
9.9 Ion Exchange	551
9.9.1 Capacity and Equilibrium.....	553
9.9.2 Kinetics and Breakthrough.....	554
9.9.3 Operation Modes.....	555
9.9.4 Industrial Application.....	556
10. Drying.....	561
10.1 Types of Dryers	562
10.2 Drying Goods and Desiccants	566
10.2.1 Drying Goods	567
10.2.2 Desiccants.....	571
10.2.3 Drying by Radiation.....	572
10.3 The Single-Stage Apparatus in the Enthalpy–Concentration Diagram for Humid Air.....	572
10.4 Multistage Dryer.....	578
10.5 Fluid Dynamics and Heat Transfer.....	580
10.6 Drying Periods.....	581
10.6.1 Constant Rate Period (I. Drying Period).....	582
10.6.2 Critical Moisture Content.....	585
10.6.3 Falling Rate Period (II. Drying Period).....	585
10.7 Some Further Drying Processes	590

11. Conceptual Process Design.....	595
11.1 Processes for Separating Binary Mixtures	596
11.1.1 Concentration of Sulfuric Acid	596
11.1.2 Removal of Ammonia from Wastewater	598
11.1.3 Removal of Hydrogen Chloride from Inert Gases	599
11.1.4 Air separation	601
11.2 Processes for Separating Zeotropic Multicomponent Mixtures	602
11.2.1 Basic Processes for Fractionating Ternary Mixtures	603
11.2.2 Processes with Side Columns.....	607
11.2.3 Processes with Indirect (Thermal) Column Coupling.....	612
11.3 Processes for Separating Azeotropic Mixtures.....	617
11.3.1 Fractionation of Mixtures with Heteroazeotropes	617
11.3.2 Pressure Swing Distillation	619
11.3.3 Processes with Entrainer	620
11.4 Hybrid Processes	623
11.4.1 Azeotropic Distillation	624
11.4.2 Extractive Distillation	625
11.4.3 Processes Combining Distillation and Extraction.....	626
11.4.4 Processes Combining Distillation with Desorption	627
11.4.5 Processes Combining Distillation with Adsorption	627
11.4.6 Processes Combining Distillation with Permeation.....	629
11.5 Reactive Distillation	631
References	635
