1 Introduction 1

2 Scientific Question 3

3 Theory and technological background 5

3.1 Organelles and particles separation in macro and microfluidic systems 5

3.1.1 Mitochondria separation in macro scale 5

3.1.2 Particles and mitochondria separation in micro scale 8

3.2 Soft lithography methods using polydimethylsiloxane 20

3.3 Surface modification for protein immobilization 22

3.4 Antigen-Antibody binding reaction 27

3.5 Finite element analysis for design and analysis of microfluidic systems 30

3.5.1 Computational fluid dynamics 31

3.5.2 Fluid-structure interaction 31

3.6 Mitochondria respiration 32

4 Materials and Methods 35

4.1 CAD Design 35

4.2 System design and fabrication 35

4.3 Contact angle measurement 40

4.4 Sample preparation 41

4.4.1 Cell harvest and disruption 42

4.4.2 Purification of the mitochondrial fragment 42

4.5 Microfluidic experiments 43

4.6 Biotinylation of TOM20 43

4.7 Biotin quantification 44

4.8 Protein quantification 45

4.9 Respiration assay 46

4.10 ATP quantification 47

4.11 Electron microscopy of biological samples 47

V

CONTENTS

4.12	Image analysis	49
4.13	Finite element analysis of the microfluidic system	50
4.13.1	Modeling the binding reaction of mitochondria on chip using COMSOL 4.2	50
4.13.2	Calculation of unbinding force on a bound mitochondrion us- ing COMSOL 4.2	51
5	Results and Discussion	53
5.1	Device manufacturing and integration of the periphery	53
5.1.1	Design of a holder assembly for the microfluidic experiment . .	53
5.1.2	PDMS microchannel	55
5.1.3	Microfluidic connection of the channel inlet and outlet	57
5.2	Flow characteristic in the microchannel	59
5.3	Surface activation	61
5.4	Silanization of the glass substrate	64
5.5	Immobilization of the TOM20 antibodies	66
5.6	Cell lysis and pre-concentration of the mitochondria fraction	70
5.7	Immobilization of pre-marked mitochondria	70
5.7.1	Static immobilization of pre-marked mitochondria	71
5.7.2	Specificity of the surface modification	72
5.8	Immobilization of non-marked mitochondria	74
5.8.1	General experimental layout	75
5.8.2	Mitochondria isolation from a pre-isolated fraction and from cell lysate	76
5.8.3	Comparison of the yield from the pre-isolated mitochondria and cell lysate fraction	78
5.8.4	Effect of the flow profile on the mitochondria binding	79
5.9	Effect of the flow rate on the amount of bound mitochondria	80
5.9.1	Effect of antibody immobilization flow rate on the amount of bound mitochondria	80
5.9.2	Effect of the mitochondria immobilization flow rate	82
5.10	Mitochondria respiration	84
5.10.1	Characterization of isolated mitochondria	85
5.10.2	Mitochondria respiration on chip	88
5.11	Mathematical modeling of the binding reaction	91
5.11.1	Mathematical model for antigen-antibody binding reaction . .	92
5.11.2	Dependency of the forward and reverse reaction rate constant from the flow rate	96
6	Summary and outlook	106
