

Table of Contents

1	Introduction	1
2	Euclidean plane	11
2.1	Classical definitions	12
2.2	Tangent lines of conics	30
2.3	Mechanisms tracing conics	56
3	Differential Geometry	69
3.1	Conics as orbits of planets	70
3.2	Conics in planar differential geometry	85
3.3	Conics in differential geometry of surfaces	128
4	Euclidean 3-space	137
4.1	Planar intersections of cones of revolution	138
4.2	Pairs of focal conics, Dupin cyclides	147
4.3	Perspective images of conics	163
4.4	Spatial interpretation of conic constructions	172
5	Projective Geometry	187
5.1	Projective planes	188
5.2	Perspectivities, projectivities	199
5.3	Coordinatization	205
5.4	Harmonic quadruples	217
6	Projective conics	229
6.1	Steiner's definition of a conic	230
6.2	Pascal, Pappus, Brianchon	232
6.3	Equation and parametrization of a conic	240
6.4	There is only one conic in a projective plane	252
7	Polarities and pencils	273
7.1	Polar system of a conic	274
7.2	Definition of a conic according to von Staudt	299

7.3	Pencils of conics	306
7.4	Desargues's involution theorem	336
7.5	Quadratic Cremona transformations	356
8	Affine Geometry	377
8.1	Conjugate diameters of ellipses and hyperbolas	379
8.2	Conics are rational quadratic Bézier curves	400
8.3	Conics and number theory	405
9	Special problems	411
9.1	Conics in triangle geometry	412
9.2	Isoptic curves of conics	434
9.3	Pedal points on conics, Apollonian hyperbola	442
9.4	Pedal curves of conics	446
9.5	Poncelet porisms	453
9.6	Billiards in ellipses	479
10	Other geometries	515
10.1	Spherical conics	516
10.2	Conics in non-Euclidean planes	549
	References	565
