Part I: Future Generation Fuzzy Systems

1	Towards Designing Human Centric Systems: A New View at Fuzzy Modeling with Granular Membership Functions	3
	Witold Pedrycz	
1.1	Introductory Notes	3
1.2	Granular Representation of Membership Functions- A Design of Output Interfaces	6
1.3	The Design of Input Interface- Construction of Logic-Consistent Granular Representations of Fuzzy Sets	7
1.3.1	The Components of the Optimization Problem	11
1.4	Decision-Making with a Granular Representation of Fuzzy Sets: AHP Modeling Revisited	12
1.4.1	The AHP Method- A Brief Review	13
1.4.2	A Quantification (Granulation) of Linguistic Terms as Their Operational Realization	15
1.4.3	The Optimization of the Granulation Problem	16
1.5	Conclusions	22
	References	23
2	Step Fuzzy Numbers and Neural Networks in Defuzzification Functional Approximation	25
	Witold Kosiński and Katarzyna Węgrzyn-Wolska	
2.1	Introduction	25
2.2	Ordered Fuzzy Numbers	26
2.3	Defuzzification Functionals	28
2.4	Step Numbers	31
2.5	Approximation of Defuzzification Functionals	32
2.6	Neural Network Simulations	33
2.7	Nonlinear Defuzzification Functional	36

2.8	Activation Functions	37
2.9	Conclusion	39
	References	39

Part II: Parallel and Multiobjective Evo-Based Techniques and Architectures in Large-Scale Global Optimization

3	Parallel Approaches in MOACOs for Solving the Bi-criteria TSP: A Preliminary Study	45
	A.M. Mora, P.A. Castillo, M.G. Arenas, P. García-Sánchez, J.L.J. Laredo, and J.J. Merelo	
3.1	Introduction	45
3.2	Preliminary Concepts	46
	3.2.1 Ant Colony Optimization	46
	3.2.2 Multi-Objective Optimization	49
3.3	Parallel Approaches	50
3.4	MOACOs to Study	52
	3.4.1 BIAANT	53
	3.4.2 MOACS	54
	3.4.3 CHAC	55
3.5	Experiments and Results	56
3.6	Conclusions and Future Work	64
	References	65
4	Island Injection Genetic Algorithm with Relaxed Coordination for the Multiple Sequence Alignment Problem	67
	Lidia Araujo Miranda, Marcos Fagundes Caetano, Luiza Jaques, Jan Mendonca Correa, Alba Cristina Magalhaes Alves de Melo, and Jacir Luiz Bordim	
4.1	Introduction	67
4.2	Serial and Parallel Genetic Algorithms	70
	4.2.1 Parallel Genetic Algorithms	70
4.3	Multiple Sequence Alignment	72
4.4	Parallel Genetic Algorithms for MSA	74
4.5	MSA Island Injection Algorithm with Relaxed Coordination	76
	4.5.1 General Overview	76
	4.5.2 High Resolution Archipelago	78
	4.5.3 Low Resolution Archipelago	79
	4.5.4 Basic Genetic Algorithm	80
4.6	Experimental Results	80
	4.6.1 Results for 1ac5	81
	4.6.2 Results for ttkrsyedq	82
	4.6.3 Results for virul fac	83

4.6.4	Overall Evaluation	83
4.6.5	Comparison with the Strong Coordination Strategy	84
4.7	Conclusion	85
	References	86
5	Distributed Evolutionary Computation Using SOAP and REST Web Services	89
	P.A. Castillo, P. García-Sánchez, M.G. Arenas, J.L. Bernier, and J.J. Merelo	
5.1	Introduction	90
5.2	SOAP: Simple Object Access Protocol	92
5.3	REST: Representational State Transfer	93
5.4	Parallel and Distributed EA Using Web Services	94
5.5	Comparing SOAP and REST Programming Models	94
5.6	Experimental Setup and Results	95
5.6.1	Proof of Concept: Client-Server Efficiency Comparison	96
5.6.2	Master-Slave Based GA Implementation	98
5.6.3	Master-Slave Based EA Implementation Using Web-Services	100
5.7	Conclusions	107
	References	108
6	GPU Parallel Computation in Bioinspired Algorithms: A Review	113
	M.G. Arenas, G. Romero, A.M. Mora, P.A. Castillo, and J.J. Merelo	
6.1	Introduction	113
6.2	Throughput, Parallelism and GPUs	115
6.3	GPUs Programming	118
6.3.1	Programming Model	118
6.3.2	Execution Model	122
6.3.3	Memory Model	123
6.4	Bioinspired Methods on GPUs	124
6.4.1	Master-Slave Approaches	125
6.4.2	Fine-Grained Approaches	126
6.4.3	Coarse-Grained Approaches (Island Model)	128
6.4.4	Hybrid Approaches	129
6.4.5	Artificial Neural Networks Implementations on GPUs	130
6.5	Conclusions	130
	References	131

**Part III: Nature-Inspired Solutions
for Intelligent Networking**

7 Scalability Analysis: Reconfiguration of Overlay Networks Using Nature-Inspired Algorithms	137
Simone A. Ludwig	
7.1 Introduction	137
7.2 Related Work	139
7.3 Approaches	141
7.3.1 Genetic Algorithm Implementation	144
7.3.2 Artificial Immune System Implementation	144
7.3.3 Particle Swarm Optimization Implementation	146
7.4 Experiments and Results	147
7.4.1 Overall Comparison of Approaches	147
7.4.2 Investigation of Network and Link Failures	148
7.4.3 Scalability Analysis	149
7.5 Conclusion	152
References	153
8 Analysis of Emergent Behavior for GA-Based Topology Control Mechanism for Self-Spreading Nodes in MANETs	155
Stephen Gundry, Jianmin Zou, Elkin Urrea, Cem Safak Sahin, Janusz Kusyk, and M. Umit Uyar	
8.1 Introduction	156
8.2 Related Work	157
8.3 Force-Based Genetic Algorithm (FGA)	158
8.3.1 Chromosomes in FGA	159
8.3.2 Fitness Function for FGA	159
8.4 Dynamical System Model of FGA	160
8.4.1 Population Representation	161
8.4.2 Heuristic Functions	161
8.4.3 Selection	162
8.4.4 Crossover	163
8.4.5 Mutation	165
8.4.6 Estimating FGA Behavior	166
8.5 Markov Chain Model for FGA	171
8.5.1 Homogeneous Finite Markov Chains	174
8.5.2 Convergent Nature of Ergodic Homogeneous Finite Markov Chains	176
8.5.3 Convergence of FGA Analytical Model	177
8.5.4 Fitness Analysis for Stationary Distribution	179
8.6 Conclusions and Future Work	180
References	182

9	Evolutionary P2P Networking for Realizing Adaptive Networks	185
	Kei Ohnishi, Mario Köppen, Kaori Yoshida, and Yuji Oie	
9.1	Introduction	186
9.2	Evolutionary P2P Networking	189
9.2.1	Network Composition	190
9.2.2	Joining and Leaving Nodes	190
9.2.3	Fitnesses Assigned by Nodes	190
9.2.4	Representations of Network Topologies	191
9.2.5	Evolutionary Operators	192
9.2.6	Timing for Topology Generation	195
9.2.7	Procedure and Parameters	195
9.3	Simulations of EP2P	196
9.3.1	Dynamic P2P Environmental Model	196
9.3.2	Evaluation Scenarios	197
9.3.3	Observations	198
9.3.4	Results	198
9.3.5	Using a Different Type of Network Topology	204
9.4	Parallel Evolutionary P2P Networking	206
9.4.1	Gathering Fitnesses by Super Nodes	206
9.4.2	Evolutionary Operators	207
9.5	Simulations of P-EP2P	208
9.5.1	Simulation Model and Configurations	208
9.5.2	Simulation Results	208
9.6	Conclusion	211
	References	212
10	A Taxonomy of Evolutionary Inspired Solutions for Energy Management in Green Computing: Problems and Resolution Methods	215
	Joanna Kołodziej, Samee U. Khan, and Albert Y. Zomaya	
10.1	Introduction	215
10.2	Taxonomy of Energy Management in Future Generation Distributed Computing Systems	216
10.3	Static Energy Management: Code Optimizers in Embedded Systems	218
10.4	Evolutionary Inspired Dynamic Data and Resource Management in Green Computing	221
10.4.1	Energy Efficient Data Transmission	221
10.4.2	Energy-Aware Data Aggregation in Grids, Clouds and Wireless Sensor Networks	223
10.4.3	Dynamic Voltage and Frequency Scaling in Energy-Aware Scheduling and Resource Allocation Problems	226

10.5	Conclusions	229
	References	231

 Part IV: Economic and Biological Approaches		
12	An Economics-Inspired Noise Model in Spatial Games with Reputation	271
	Dhruv Gairola and Siang Yew Chong	
12.1	Introduction	271
12.2	Complex Interactions	273
12.2.1	Noisy Behavior	274
12.2.2	Spatiality	274
12.2.3	Indirect Reciprocity	275
12.2.4	The Donation Game	276
12.2.5	Implementation	276
12.3	Psychic Noise: A Novel Approach	277
12.3.1	Psychic Distance	278
12.3.2	Definition of Psychic Noise	278
12.3.3	Modelling Psychic Noise	279
12.4	Case Studies	281
12.4.1	Noise-Free Spatial Interactions	281
12.4.2	Noisy Spatial Interactions	282
12.5	Conclusion	290
	References	291
13	Intelligent Modeling and Control for Autonomous Logistics	295
	Tobias Warden, Janusz Wojtusiak, and Otthein Herzog	
13.1	Introduction	295
13.2	Multi-agent Control of Logistic Processes	298
13.2.1	Knowledge Management in Autonomous Logistics	299
13.2.2	Machine Learning in Autonomous Logistics	301

13.3	Autonomous Control in Pickup & Delivery Operations	305
13.3.1	Learning Predictive Models for Decision Support . . .	307
13.3.2	Optimization of Transport Schedules	310
13.4	Future Challenges and Research Directions	319
13.4.1	Integration of Multiple Knowledge Sources	319
13.4.2	Knowledge Transfer in Heterogeneous MAS	321
13.5	Conclusion	322
