

Contents

Foreword — VII

Introduction — IX

1 Quaternions, vectors, matrices — 1

- 1.1 Hamilton quaternions — 1
- 1.2 Gibbs–Heaviside vector algebra — 4
- 1.3 Macfarlane quaternions — 5
- 1.4 Pauli matrices — 6
- 1.5 Dirac matrices — 7

2 Algebra of sedeons — 10

- 2.1 Space-time sedeons — 10
- 2.2 Rotation and space-time conjugation — 14
- 2.3 Subalgebras of sedeons — 16

3 Sedeons in relativistic physics — 18

- 3.1 Lorentz transformations — 18
- 3.2 Energy, momentum and angular momentum — 20
- 3.3 Sedeonic wave equation for quantum particles — 20
- 3.4 Sedeonic equation for force fields — 21

4 Equations for electromagnetic field — 23

- 4.1 Sedeonic equation for electromagnetic field in a vacuum — 23
- 4.2 Energy and momentum of the electromagnetic field — 25
- 4.3 Lorentz invariants — 26
- 4.4 Symmetric form of electromagnetic field equations — 27
- 4.5 Sedeonic equations for the field in homogeneous media — 30

5 Equations for weak gravitational field — 40

- 5.1 Linearized equations for gravitational field — 40
- 5.2 Generalized Newton–Coulomb law — 41
- 5.3 Joint description of electromagnetic and gravitational fields — 43
- 5.4 Energy and momentum of the gravitoelectromagnetic field — 46

6 First-order wave equation for massless field — 48

- 6.1 Sedeonic homogeneous first-order wave equation — 48
- 6.2 Second-order relations for the field potentials — 50
- 6.3 Plane wave solution — 51
- 6.4 Nonhomogeneous first-order equation — 52

7	Sedeonic equations for fields with non-zero mass of quantum — 55
7.1	Second order wave equation for massive field — 55
7.2	Sedeonic Proca equations — 58
7.3	Stationary field of point charge — 59
7.4	Homogeneous first-order wave equation — 61
7.5	Plane wave solution of first-order wave equation — 61
7.6	Inhomogeneous first-order equation — 62
7.7	Spherical models of scalar particles — 64
8	Symmetric form of equations for massive and massless fields — 72
8.1	Symmetric second-order equation for massive field — 72
8.2	Second order equation for massless fields — 77
8.3	First-order equation for massive field — 81
8.4	Gradient invariance of sedeonic field equations — 83
9	Equations of relativistic quantum mechanics — 86
9.1	Sedeonic wave equation for quantum particles — 86
9.2	Field interpretation of sedeonic Klein–Gordon equation — 87
9.3	Relativistic electron in a uniform magnetic field — 88
9.4	Relations between sedeons and Dirac spinors — 90
9.5	Sedeonic wave equation for non-relativistic particles — 92
10	Sedeonic field equations for dyons — 96
10.1	Equations for electromagnetic field of dyons — 97
10.2	Energy and momentum of the dyonic electromagnetic field — 101
10.3	Lorentz invariants of dyonic electromagnetic field — 102
10.4	Sedeonic Klein–Gordon equation for dyons — 103
10.5	Sedeonic first-order wave equation for dyons — 106
10.6	Dyonic model of charged particles — 107
11	Sedeonic equations of hydrodynamics — 113
11.1	Symmetric form of equations for ideal fluid — 113
11.2	Sedeonic equation for a vortex-free flow — 116
11.3	Sedeonic equations for vortex flow — 117
11.4	Sound waves — 120
11.5	Vortex models of plane turbulent wall-bounded flows — 121
11.6	Vortex model of plane flow of a Non-Newtonian fluid — 133
12	Hydrodynamic model of plasma — 140
12.1	Equations of the two-fluid model of vortex plasma — 140
12.2	Linearized equations — 143
12.3	Sound waves — 144

- 12.4 Damping in vortex plasma — 147
- 12.5 Electron-positron plasma — 149
- 12.6 Nonlinear equations with generalized Lorentz force — 151

- 13 Hydrodynamic model of electron vortex fluid in solids — 153**
- 13.1 Electron fluid in superconductors — 153
- 13.2 Electron-hole fluid in semiconductors — 159
- 13.3 Electron fluid in normal metals — 162

- 14 Sedeonic generalization of telegraph equations — 166**
- 14.1 Sedeonic form of telegraph equations for electric lines — 166
- 14.2 Three-dimensional telegraph equations — 169

- A Matrix representation of sedeons — 175**

- B Space-time sedenions — 179**
- B.1 Algebra of space-time sedenions — 179
- B.2 Spatial rotation and space-time conjugation — 183
- B.3 Lorentz transformations — 184
- B.4 Equations of relativistic quantum mechanics — 185
- B.5 Generalized sedenionic equations of force fields — 187

Bibliography — 189
