Preface *xi*

I	Carbon	1
1.1	Introduction	1
1.2	Fabrication of Carbon Nanomaterials	2
1.2.1	Graphene	2
1.2.1.1	Top-down Methods	3
1.2.1.2	Bottom-up Methods	8
1.2.2	Carbon Nanotubes	9
1.2.2.1	Arc Discharge	11
1.2.2.2	Laser Ablation	12
1.2.2.3	Chemical Vapor Deposition	12
1.2.3	Graphyne	13
1.2.3.1	Liquid-phase Synthesis	15
1.2.3.2	Solid-phase Synthesis	17
1.3	Properties and Applications of Carbon Nanomaterials	17
1.3.1	Graphene	17
1.3.1.1	Electrical Properties and Applications	18
1.3.1.2	Optoelectronic Properties and Applications	20
1.3.1.3	Spintronic Properties	23
1.3.1.4	Superconductive Properties	23
1.3.2	Carbon Nanotubes	25
1.3.3	Graphyne	30
1.4	Conclusion	30
	References	31
II	Silicon	41
2.1	Introduction	41
2.2	Synthesis of Si NWs	42
2.2.1	Fundamental Aspects and Morphology Analysis of VLS Growth	43
2.2.1.1	The Process of Patterning Metal NPs	44
2.2.1.2	The Process of Silicon Transportation	45

- 2.2.1.3 Catalysts 47
- 2.2.2 Morphology Analysis for VLS or VSS Methods 51
 - 2.2.2.1 Control of Diameter and Growth Direction 52
 - 2.2.2.2 Diameter Stability 52
 - 2.2.2.3 Contact Angle, Infiltration, and Base Exbandation 53
- 2.2.3 Oxide-assisted Growth 55
 - 2.2.3.1 Development of OAG Theory 55
 - 2.2.3.2 VLS or SLS: A Discussion of Precursor States in the Heat Pipes 55
 - 2.2.3.3 Characterization of OAG NWs 57
 - 2.2.3.4 OAG Growth on Substrate 57
- 2.2.4 Thermal Annealing of Silicon Substrates 58
- 2.2.5 Dissolution-based Methods 59
- 2.2.6 Etching Methods 60
 - 2.2.6.1 Reactive Ion Etching and Dry Etching 60
 - 2.2.6.2 Metal-assisted Chemical Etching 60
- 2.3 Horizontal Si NWs: Self-assembly or In-plane Epitaxy 61
 - 2.3.1 Growth-assembly Methods 61
 - 2.3.1.1 Fluid Alignment Strategy 61
 - 2.3.1.2 Langmuir–Blodgett Assembly Strategy 61
 - 2.3.1.3 Dielectrophoresis of NWs 61
 - 2.3.1.4 Printing 62
 - 2.3.1.5 Blown Bubble Film Method 62
 - 2.3.2 In Situ Growth of Lateral NWs 62
- 2.4 Applications of Si NWs 63
 - 2.4.1 Si NW Solar Cells 63
 - 2.4.1.1 Principle and Structure of Si NW Solar Cells 64
 - 2.4.1.2 Si NW Solar Cell Performance Improvements 67
 - 2.4.1.3 Passivation of Si NW Solar Cells 69
 - 2.4.2 Si NW-based Anode Materials for Lithium Batteries 71
 - 2.4.3 Thermoelectric Generators 73
 - 2.4.3.1 Si NW-based TEGs 74
 - 2.4.3.2 On-chip Integration of Si NW-based Thermoelectric Modules 76
 - 2.4.4 Electronics of Si NWs 76
 - 2.4.4.1 Properties of Si NWs 77
 - 2.4.4.2 Si NW-based Field Effect Transistors 80
 - 2.4.4.3 Fabrication of Si NW Transistors 86
- References 94
- III Germanium 111**
 - 3.1 Introduction 111
 - 3.2 Synthesis of Germanium Nanomaterials 112
 - 3.2.1 Laser Ablation 112
 - 3.2.2 SFLS Method 113
 - 3.2.3 Thermal Evaporation 115

3.2.4	Chemical Vapor Deposition	116
3.2.5	Hydrothermal Synthesis	119
3.3	Properties and Applications of Germanium Nanomaterials	120
3.3.1	Optical Properties	120
3.3.2	Raman Spectrum	122
3.3.3	Energy Storage Applications	124
3.3.4	Field Effect Transistor	128
3.4	Conclusion	131
	References	131
IV	Phosphorus	139
4.1	Introduction	139
4.2	Synthesis of BP	139
4.2.1	High Pressure	140
4.2.2	Ball Milling	141
4.2.3	Mineralization	141
4.3	Synthesis of BP Nanosheets	142
4.3.1	“Top-down” Approach	142
4.3.1.1	Mechanical Exfoliation Method	142
4.3.1.2	Electrochemical Stripping	143
4.3.1.3	Liquid-phase Stripping	144
4.3.2	“Bottom-up” Approach	144
4.3.2.1	Chemical Vapor Deposition	144
4.3.2.2	Solvothermal	146
4.4	Properties of BP	146
4.4.1	Lattice Structure of BP	146
4.4.2	Energy Band Structure of BP	147
4.4.3	Anisotropy of BP	147
4.5	Applications of BP	148
4.5.1	Photodetector	148
4.5.2	Field Effect Transistor	152
4.5.3	Solar Cell	153
4.5.4	Biomedical and Sensing	155
4.5.5	Photocatalytic Degradation	157
4.6	Blue Phosphorus	159
4.7	Violet Phosphorus	160
4.8	Conclusion	161
	References	161
V	Tellurium	169
5.1	Introduction	169
5.2	Controlled Synthesis of Tellurium Nanomaterials	170
5.2.1	0D Tellurium Nanomaterial Synthesis	170
5.2.2	Controllable Synthesis of 1D Tellurium Nanostructures	170

5.2.2.1	Controlled Synthesis of Tellurium NWs	171
5.2.2.2	Controlled Synthesis of Tellurium Nanotubes	172
5.2.2.3	Controlled Synthesis of Tellurium Nanoribbons	174
5.2.3	Synthesis of 2D Tellurium Nanostructures	175
5.2.3.1	Gas-phase Deposition	175
5.2.3.2	Hydrothermal Synthesis	175
5.2.3.3	vdW Epitaxy	177
5.2.3.4	Liquid-phase Stripping	177
5.2.4	Synthesis of Chiral Tellurium Nanomaterials	177
5.3	Properties and Applications of Tellurium Nanostructures	179
5.3.1	Electrical Property	179
5.3.2	Photoconductive Properties	181
5.3.3	Piezoelectric Thermoelectric Properties	183
5.3.4	Chiral Properties	184
5.3.5	Gas Sensing	186
5.3.6	Chemical Templates	187
5.3.7	Batteries	189
5.4	Conclusion	191
	References	191

VI Selenium 199

6.1	Introduction	199
6.2	Synthesis of Selenium Nanomaterials	200
6.2.1	Synthesis of 0D Selenium Nanostructures	200
6.2.2	Synthesis of 1D Selenium Nanostructures	203
6.2.2.1	Synthesis of Selenium NWs	203
6.2.2.2	Synthesis of Selenium Nanotubes	206
6.2.2.3	Synthesis of Selenium Nanorods	208
6.2.2.4	Synthesis of Selenium Nanobelts	209
6.2.3	Synthesis of 2D Selenium Nanostructures	211
6.3	Properties and Applications of Selenium Nanostructures	212
6.3.1	Optical Properties	213
6.3.2	Raman Spectroscopy	214
6.3.3	Photoluminescence	215
6.3.4	Electronics/Optoelectronics	216
6.3.5	Energy Storage and Conversion	219
6.3.6	Biological Applications	220
6.4	Conclusion	222
	References	222

VII Borophene, Stanene, Arsenene, and Antimonene 231

7.1	Introduction	231
7.2	Borophene	232
7.2.1	Preparation of Borophene	232
7.2.2	Properties and Applications of Borophene	234

- 7.3 Stanene 237
 - 7.3.1 Preparation of Stanene 237
 - 7.3.2 Properties and Applications of Stanene 238
- 7.4 Arsenene and Antimonene 241
 - 7.4.1 Preparation of Arsenene and Antimonene 241
 - 7.4.2 Properties and Applications of Arsenene and Antimonene 242
- 7.5 Conclusion 244
 - References 245
- Index 249
