Preface *xiii*

1	Basic Principles of Photocatalysis	1
	<i>Baker Rhimi and Zhifeng Jiang</i>	
1.1	Introduction	1
1.2	Definition and Fundamental Principles of Photocatalysis	2
1.3	Factors Affecting Photocatalytic Performance	6
1.3.1	Light Absorption	6
1.3.1.1	Metal/Nonmetal Doping	7
1.3.1.2	Plasmonic Photocatalysts	8
1.3.2	Charge Carrier Separation and Transfer	10
1.3.2.1	Solid–Solid Junctions	10
1.3.2.2	Facet Engineering	12
1.3.2.3	Cocatalyst Loading	13
1.4	Investigation of Photocatalysis for Real Applications	14
1.5	Conclusion	16
	References	17
2	The Role of Layer Structure in Photocatalysis	21
	<i>Kaiting Yang and Xiaoli Jin</i>	
2.1	Layered Structure	21
2.1.1	Layer Structured Catalysts	21
2.2	Application Fields of Layered Catalysts	23
2.2.1	Photocatalytic Water Decomposition to Produce Hydrogen	23
2.2.2	Photocatalytic Reduction of CO ₂	23
2.2.3	Photocatalytic Production of H ₂ O ₂	23
2.2.4	Photocatalytic Nitrogen Fixation	24
2.2.5	Photocatalytic Degradation of Pollutants	24
2.3	Function of Layered Structure	24
2.3.1	Forming a Strong Built-in Electric Field	25
2.3.2	Increasing Active Sites	27
2.4	Preparation of Layered Catalyst	28
2.4.1	Hydrothermal/Solvothermal Method	28

2.4.2	Solid-phase Synthesis Method	29
2.4.3	Template Method	29
2.4.4	Sol–Gel Method	29
2.5	Research Direction of Layered Catalysts	30
2.5.1	Ultrathin Thickness	30
2.5.2	Active Crystal Surface	30
2.5.3	Morphology Control	31
2.5.4	Semiconductor Composite	31
	References	32
3	Applications of Layered Photocatalysts	35
	<i>Rumeng Zhang and Dehua Xia</i>	
3.1	Introduction	35
3.2	Hydrogen Generation	36
3.3	CO ₂ Reduction	39
3.4	N ₂ Fixation	44
3.5	Removal of Pollutions	47
3.6	Organic Synthesis	50
3.7	H ₂ O ₂ Production	51
3.8	Conclusion	53
	References	54
4	Layered Bismuth-Based Photocatalysts 1: BiOX	
	(X = Cl, Br, I)	59
	<i>Yi Zhang and Jun Di</i>	
4.1	Introduction	59
4.2	Crystal Structure of BiOX	59
4.3	Synthesis Methods for BiOX	61
4.3.1	Hydrothermal and Solvent-Thermal Methods	63
4.3.2	High-Temperature Solid-Phase Synthesis Method	64
4.3.3	Chemical Deposition Method	65
4.3.4	Mechanochemical Method	67
4.3.5	Microwave Method	67
4.3.6	Reactive Ionic Liquid Method	68
4.4	Modification Strategies for Bismuth Oxyhalide Photocatalysts	69
4.4.1	Composition Modulation	69
4.4.1.1	Bismuth-Rich Strategy	70
4.4.1.2	Defect Engineering	73
4.4.1.3	Elemental Doping	74
4.4.1.4	Solid Solution Strategy	76
4.4.2	Structural Regulation Strategy	78
4.4.2.1	Morphostructural Modulation	78
4.4.2.2	Facet-Synergistic Mechanisms	87
4.4.3	Heterojunction Structure Construction	90
4.4.3.1	2D-2D Faceted Junctions	90

- 4.4.3.2 Type I Heterojunctions 91
- 4.4.3.3 Type II Heterojunctions 92
- 4.4.3.4 p–n Type Heterojunctions 92
- 4.4.3.5 Z-Scheme Heterojunctions 93
- 4.4.3.6 S-Scheme Heterojunctions 94
- 4.4.3.7 Facet Heterojunctions 95
- 4.4.4 Single-Atom Engineering 96
- 4.4.5 Polarization Strategy 97
- 4.4.6 Surface Plasmon Excitation Effect 101
- 4.5 Photocatalytic Applications of BiOX 102
 - 4.5.1 Applications in the Field of Environmental Remediation 103
 - 4.5.1.1 Water Pollution Purification 103
 - 4.5.1.2 Air Pollution Control 103
 - 4.5.1.3 Heavy Metal Removal 104
 - 4.5.2 Applications in the Field of Energy Conversion 104
 - 4.5.2.1 Hydrogen Production 104
 - 4.5.2.2 CO₂ Reduction 104
 - 4.5.2.3 N₂ Fixation 105
 - 4.5.3 Others 108
 - 4.5.3.1 Photodynamic Therapy 108
 - 4.5.3.2 Organic Synthesis 109
- 4.6 Conclusions and Perspectives 110
- References 111

- 5 Layered Bismuth-Based Photocatalysts 2 BiXO₄ (X = V, P) 117
 - Shi Xian*
 - 5.1 BiVO₄ Photocatalyst 117
 - 5.1.1 Crystal Structures of BiVO₄ 117
 - 5.1.2 Electronic Structures of BiVO₄ 119
 - 5.1.3 Optical Characteristics of BiVO₄ 120
 - 5.1.4 Preparation of BiVO₄ 122
 - 5.1.4.1 High-Temperature Solid-State Reaction Method 122
 - 5.1.4.2 Coprecipitation Method 123
 - 5.1.4.3 Hydrothermal Method 123
 - 5.1.4.4 Microwave-Assisted Method 123
 - 5.1.4.5 Sol–Gel Method 123
 - 5.1.5 Modification of BiVO₄ 124
 - 5.1.5.1 Ion Doping 124
 - 5.1.5.2 Morphology Control 124
 - 5.1.5.3 Crystallographic Engineering 125
 - 5.1.5.4 BiVO₄-Based Heterojunction Composite Materials 125
 - 5.2 BiPO₄ Photocatalyst 126
 - 5.2.1 Crystal Structures of BiPO₄ 126
 - 5.2.2 Preparation of BiPO₄ 126

5.2.2.1	Hydrothermal Method	126
5.2.2.2	Solvothermal Method	126
5.2.2.3	Microwave-Assisted Method	127
5.2.2.4	Ultrasonic Method	127
5.2.3	Application of BiPO_4 in the Field of Photocatalysis	127
5.2.4	Strategies for Improving the Photocatalytic Performances of BiPO_4	127
5.2.4.1	Optimizing Preparation Methods	128
5.2.4.2	Doping Modification	128
5.2.4.3	Heterogeneous Structure Construction	129
	References	130
6	Layered Bismuth-Based Photocatalysts 3: Bi_2XO_6	
	($\text{X} = \text{Mo}, \text{W}$)	133
	<i>Gongzhe Nie</i>	
6.1	Introduction	133
6.2	The Preparation Method and Structural Characteristics of Bi_2XO_6	
	($\text{X} = \text{Mo}, \text{W}$)	134
6.2.1	Solvothermal Synthesis	135
6.2.1.1	Synthesis Reaction General Steps	135
6.2.1.2	Control of Particle Size and Morphology	136
6.2.1.3	Additives and Surfactants	136
6.3	Performance of Bi_2XO_6 ($\text{X} = \text{Mo}, \text{W}$) Photocatalyst Coupled with Other Substances in the Treatment of Environmental Pollution	140
6.4	The Mechanism of Bi_2XO_6 ($\text{X} = \text{Mo}, \text{W}$) Photocatalyst in Dealing with the Problem of Environmental Pollution	143
6.5	Conclusion	145
	References	145
7	Metal-Free Layered Photocatalyst: $\text{g-C}_3\text{N}_4$	153
	<i>Jia Wu and Wei Liu</i>	
7.1	Introduction of $\text{g-C}_3\text{N}_4$	154
7.2	Preparation Method of $\text{g-C}_3\text{N}_4$	155
7.3	Methods for the Modification of $\text{g-C}_3\text{N}_4$	157
7.3.1	The Morphological Control of $\text{g-C}_3\text{N}_4$	158
7.3.1.1	Hard-Template-Method-Modified $\text{g-C}_3\text{N}_4$	158
7.3.1.2	Soft-Template-Method-Modified $\text{g-C}_3\text{N}_4$	159
7.3.1.3	Template-Free Method	160
7.3.2	Elemental Doping of $\text{g-C}_3\text{N}_4$	160
7.3.2.1	Nonmetallic Element Doping	160
7.3.2.2	Metallic Element Doping	161
7.3.3	Exfoliation Method	162
7.3.3.1	Thermal Oxidation Exfoliation	162
7.3.3.2	Ultrasound Exfoliation	163
7.3.3.3	Chemical Exfoliation	164
7.3.4	Defect Engineering	164

- 7.3.5 Construction of Heterojunction 165
 - 7.3.5.1 Compound/g-C₃N₄ Heterojunction 166
 - 7.3.5.2 Metal Sulfide/g-C₃N₄ Heterojunction 167
 - 7.3.5.3 MOF/g-C₃N₄ Heterojunction 167
 - 7.3.5.4 Metal Oxide/g-C₃N₄ Heterojunction 168
 - 7.3.5.5 The Z-Scheme Heterojunction 168
- 7.3.6 Surface-Loading Cocatalyst 170
- 7.4 Carbon Nitride Applications in Photocatalysis 170
 - 7.4.1 Carbon Nitride Applications in Photocatalysis 170
 - 7.4.1.1 Degrading Pollutants 170
 - 7.4.1.2 Photohydrolysis of Water to Produce Hydrogen 171
 - 7.4.1.3 Photocatalytic Reduction of CO₂ 171
 - 7.4.1.4 Inactivation of Bacteria 172
- 7.5 Summary and Outlook 173
- References 173

- 8 Metal-Free Layered Photocatalysts 2: Covalent Organic Framework 181**
Rumeng Zhang and Dehua Xia
 - 8.1 Introduction 181
 - 8.2 Preparation Method of COFs 182
 - 8.3 H₂ Production 184
 - 8.4 CO₂ Reduction 187
 - 8.5 Removal of Pollution 189
 - 8.6 Photocatalytic Organic Conversion 190
 - 8.7 H₂O₂ Production 192
 - 8.8 Conclusion 194
 - References 195

- 9 Layered Double Hydroxide Photocatalysts 197**
Xing Li, Wanfen Pu, Pingya Luo, and Yang Bai
 - 9.1 About LDHs 197
 - 9.1.1 The History 197
 - 9.1.2 Crystal Structures and Properties 197
 - 9.1.2.1 Structures 197
 - 9.1.2.2 Properties 199
 - 9.2 Preparation and Photocatalytic Functionalization of LDHs 200
 - 9.2.1 Preparation of Infrastructure LDHs 200
 - 9.2.1.1 Coprecipitation 200
 - 9.2.1.2 Hydrothermal/Solvothermal 201
 - 9.2.1.3 Anion Exchange 201
 - 9.2.1.4 Roasting Reduction 201
 - 9.2.1.5 Sol-Gel 201
 - 9.2.1.6 Self-Assembly 202
 - 9.2.2 Functionalization Strategies for Photocatalysis 202

9.2.2.1	Guest Modification	202
9.2.2.2	Host Modification	203
9.2.2.3	2D Exfoliation Strategies	204
9.2.2.4	Hybridization	204
9.2.2.5	Morphology Adjustment	204
9.2.2.6	Defect Engineering	205
9.2.2.7	Surface Modification	205
9.3	Application in Environments	205
9.3.1	Characteristics	205
9.3.2	Application Examples	206
9.3.2.1	Water Purification	206
9.3.2.2	Air Purification	209
9.4	Application in Energy	209
9.4.1	Characteristics	209
9.4.2	CO ₂ Reduction Reaction (CO ₂ RR)	211
9.4.3	Water Splitting	213
9.5	Outlook	217
	References	217
10	Layer-Structured Cocatalyst for Photocatalysis: Graphene	221
	<i>Mengmeng Liu and Wei Liu</i>	
10.1	Introduction to Graphene	221
10.2	Correlation Property	221
10.3	Preparation Method	222
10.3.1	Preparation of Graphene	222
10.3.1.1	Micromechanical Exfoliation Method	223
10.3.1.2	Liquid Phase Stripping Method	223
10.3.1.3	Chemical Vapor Deposition (CVD)	224
10.3.1.4	Hummers Method (Graphene Oxide)	224
10.3.2	Preparation of Graphene-Based Semiconductor Photocatalysts	227
10.3.2.1	In Situ Growth Strategy	227
10.3.2.2	Solution Mixing Method	227
10.3.2.3	Hydrothermal/Solvothermal Method	229
10.3.2.4	Other Methods	231
10.4	Graphene-Based Photocatalyst Heterojunction	231
10.4.1	Schottky Junctions	232
10.4.2	Type II Heterojunctions	232
10.4.2.1	N–N Heterojunction	233
10.4.2.2	P–N Heterojunction	233
10.4.3	Z-Type Heterojunctions	234
10.4.3.1	Indirect Z-Scheme Heterojunctions	234
10.4.3.2	Direct Z-Scheme Heterojunctions	235
10.4.4	Van der Waals Heterostructures	236
10.5	Application of Photocatalysis	238

- 10.5.1 CO₂ Reduction 238
- 10.5.2 Hydrogen Generation 239
- 10.5.3 Pollutant Degradation 239
- 10.5.4 Photocatalytic Disinfection 240
- 10.6 Conclusion and Prospect 241
- References 241

- 11 Layer Structured Cocatalyst for Photocatalysis: Transition Metal Sulfide 245**
Zhaoyu Ma and Wenping Li
 - 11.1 Introduction 245
 - 11.2 Fundamentals of Two-Dimensional Transition Metal Sulfide 246
 - 11.2.1 Composition 246
 - 11.2.2 Photocatalytic Mechanism of TMDs 247
 - 11.3 Synthesis Methods 249
 - 11.4 Design of TMDs Cocatalysts 252
 - 11.5 Applications in Photocatalysis 253
 - 11.5.1 Photocatalytic Water Splitting 253
 - 11.5.2 Photocatalytic CO₂ Conversion 255
 - 11.5.3 Photocatalytic Degradation of Pollutants 257
 - 11.6 Future Outlook 258
 - References 259

- 12 Layer Structured Cocatalyst 3 for Photocatalysis: MXene 263**
Qizhao Wang
 - 12.1 Structure of MXene 263
 - 12.2 Preparation of MXene 265
 - 12.2.1 Hydrofluoric Acid Etching Method (HF) 266
 - 12.2.2 Fluorinated Salt Etching 268
 - 12.2.3 Chemical Vapor Deposition Method 269
 - 12.2.4 Other Etching Methods 269
 - 12.3 Physicochemical Properties of MXene 271
 - 12.3.1 Stability 271
 - 12.3.2 Surface Chemical Properties 272
 - 12.3.3 Electrical Properties 272
 - 12.3.4 Optical Properties 273
 - 12.3.5 Mechanical Properties 273
 - 12.3.6 Other Properties 274
 - 12.4 Mechanism of MXene as Cocatalyst in Photocatalysis 274
 - 12.5 MXenes in Enhancing Photocatalyst Activity 275
 - 12.5.1 Electronic Storage 275
 - 12.5.2 Adsorbents 276
 - 12.5.3 Hole Receiver 276
 - 12.5.4 Active Site 276
 - 12.6 Application of MXene in Photocatalysis 278

- 12.6.1 Hydrogen Production from Water Decomposition 278
- 12.6.2 CO₂ Reduction 279
 - 12.6.2.1 Nitride/MXene 280
 - 12.6.2.2 Metal Oxide/MXene 282
 - 12.6.2.3 Metal Salt/MXene 285
 - 12.6.2.4 Perovskite/MXene 286
 - 12.6.2.5 LDH/MXene 287
 - 12.6.2.6 Functionalized MXenes 288
- 12.6.3 MXene in Photocatalytic Nitrogen Fixation 289
- 12.6.4 Photocatalytic Degradation of Organic Pollutants 290
- 12.7 Perspectives of MXene in the Field of Photocatalysis 293
 - References 294

- 13 Face-to-Face 2D/2D Heterojunction Between Layered Photocatalysts 299**
Wei-Kean Chong, Xin Ying Kong, Siang-Piao Chai, and Teck Peng Loh
- 13.1 Introduction 299
- 13.2 Principles and Characteristics of Face-to-Face 2D/2D Heterojunction 300
- 13.3 Synthesis Strategies for 2D/2D Face-to-Face Heterojunction 303
 - 13.3.1 In Situ Hydrothermal and Solvothermal Approaches 303
 - 13.3.2 Ex Situ Electrostatic Self-Assembly 305
- 13.4 Photocatalytic Applications of 2D/2D Heterostructures 307
 - 13.4.1 CO₂ Reduction into Carbon-Neutral Fuels 307
 - 13.4.2 Water Splitting for H₂ and O₂ Production 311
 - 13.4.3 N₂ Fixation for Ammonia Production 318
- 13.5 Conclusion and Outlooks 323
