1 Motivation for Application of Computational Intelligence Techniques to Fractional Calculus Based Control Systems	1
1.1 Introduction	1
References	8
2 Applied Fractional Calculus for Computational Intelligence Researchers	9
2.1 Requirement of Fractional Order Calculus	9
2.2 Some Important Functions in Context of Fractional Calculus	10
2.2.1 Gamma Function.....	10
2.2.2 Beta Function.....	11
2.2.3 Mittag-Leffler Function	11
2.2.4 Miller-Ross Function	12
2.3 Definitions of Fractional Differ-Integrals	13
2.3.1 Grünwald-Letnikov (G-L) Definition	13
2.3.2 Riemann-Liouville (R-L) Definition.....	15
2.3.3 Caputo Definition	15
2.3.4 Equivalence between the Definitions.....	16
2.3.5 Some Properties of Fractional Differ-Integrals.....	16
2.4 Laplace Transform of Fractional Differ-Integrals.....	17
2.4.1 Basics of Laplace Transform	17
2.4.2 Laplace Transform for Fractional Integrals	18
2.4.3 Laplace Transform for Fractional Derivatives	19
2.5 Fourier Transform of Fractional Differ-Integrals	20
2.5.1 Basics of Fourier Transform	20
2.5.2 Fourier Transform for Fractional Integrals	20
2.5.3 Fourier Transform for Fractional Derivatives.....	20
2.6 Realization of Fractional Order Differ-Integrators	21
2.6.1 Continuous Time Realization	21
2.6.1.1 Carlson's Method.....	21
2.6.1.2 Charef's Method	25
2.6.1.3 Oustaloup's Method.....	27
2.6.2 Discrete Time Realization.....	30
2.6.2.1 Based on Discretization Method	30
2.6.2.2 Series Expansion for FO Element Realization	35
2.6.3 Time Domain Simulation Methods for Fractional Order Systems	37

2.7	Fractional Order Systems.....	39
2.7.1	Fractional Order LTI Systems	39
2.7.1.1	Transfer Function Representation	39
2.7.1.2	State Space Representation	42
2.7.1.3	Controllability and Observability.....	44
2.7.2	Fractional Order Nonlinear Systems.....	44
2.8	Stability of Fractional Order Systems.....	45
2.8.1	Stability of FO LTI Systems	45
2.8.2	Stability of FO Nonlinear Systems	47
2.9	Fractional Order Controllers.....	48
2.9.1	Family of Fractional Order PID Controllers	48
2.9.2	CRONE Controllers.....	50
2.9.3	Fractional Lead-Lag Compensator.....	50
2.9.4	Concept of Iso-damping Using FO Controllers	51
2.9.5	Effect of Controller Knob Variation of a Well-Tuned Control Loop.....	53
2.9.6	Controller Tuning Methods for FOPID Controllers.....	56
	References	59

3.1	Introduction	63
3.2	Artificial Neural Networks	64
3.2.1	Network Architecture and Training Methods	65
3.2.2	Neural Networks in Control.....	65
3.2.2.1	ANN in Model Predictive Control Techniques.....	66
3.2.2.2	ANN in Inverse Model Based Techniques.....	67
3.2.2.3	ANN in Adaptive Control Techniques.....	68
3.2.2.4	System Identification, Filtering and Prediction.....	69
3.3	Fuzzy Logic	69
3.3.1	Use of Fuzzy Logic in Control Applications	73
3.4	Global Optimization Using Evolutionary and Swarm Algorithms	73
3.4.1	Why Bio-inspired Algorithms over Other Conventional Techniques?	74
3.4.2	Genetic Algorithms: Key Concepts and Attributes.....	75
3.4.2.1	Chromosome Encoding and Population Initialization.....	76
3.4.2.2	Fitness Evaluation	77
3.4.2.3	Selection.....	77
3.4.2.4	Crossover	77
3.4.2.5	Mutation.....	79
3.4.2.6	Elitism.....	80
3.4.3	Brief Theory of Genetic Algorithms	80
3.4.4	Genetic Programming	81
3.4.5	Use of Bio-inspired Algorithms in Control Applications	82
3.5	Synergism between Various Paradigms.....	83
	References	84

4 Fractional Order Controller Tuning Using Swarm and Evolutionary Algorithms.....	87
4.1 Introduction	87
4.2 Optimizing a Multimodal Function with Particle Swarm Optimization ...	88
4.2.1 Outline of Particle Swarm Optimization.....	89
4.2.2 Optimizing a Function with PSO	90
4.3 A MIMO Process Control Application Example	97
4.3.1 Background of the Problem	97
4.3.2 Objective Function and Optimization Algorithm	99
4.3.3 Results and Discussions.....	100
4.4 Application to Networked Control Systems	101
4.4.1 Background of the Problem	101
4.4.2 Control over Communication Network and Scope for Stochastic Optimization Based Controller Tuning.....	104
4.4.2.1 Networked FOPID Control Scheme.....	104
4.4.2.2 Time Domain Integral Performance Index Based Tuning of Networked Process Controllers via Stochastic Optimization for Randomly-Varying Objective Function.....	106
4.4.2.3 Fractional Order PID Controller in NCS Applications.....	107
4.4.2.4 Handling Unstable Processes over NCS	109
4.4.3 Evolutionary Algorithms Based PID/FOPID Controller Tuning.....	110
4.4.3.1 Brief Description of Genetic Algorithm (GA) for Controller Tuning.....	110
4.4.3.2 Differential Evolution (DE) and Its Variants for Controller Tuning.....	111
4.5 Simulations and Results.....	113
4.5.1 MATLAB Based Simulation Study of a NCS with Packet Dropout and Variable Delay	113
4.5.1.1 Performance Degradation of Well Tuned Control Loops with Stochastic Consideration of the Network Delay	115
4.5.1.2 Performance Degradation of Well Tuned Control Loops due to Out of Order Packets and Handling Packet Drop Out with Buffers	116
4.5.2 Optimal PID and FOPID Controller Tuning for Unstable Processes with the Consideration of Randomness in Network Induced Delays and Packet Dropouts	116
4.5.3 Effect of Delay Distribution on the Tuned Networked FOPID Control Loops	124
4.5.4 Validation of the Tuning Methodology for Lesser Complicated FOPTD Processes	126
4.6 Summary.....	127
References	128
