Preface — VII

List of Special Symbols — XIII

1 Introduction — 1

- 1.1 Terminology and notations — 1
- 1.2 Iteration of a function — 1
- 1.3 Conjugation — 5
- 1.4 Completely invariant sets — 6
- 1.5 The Riemann sphere — 8
- 1.6 Möbius transformations — 10
- 1.7 Historical overview — 14
- 1.8 Exercises — 15

2 Normal families — 17

- 2.1 Normal families and equicontinuity — 17
- 2.2 Normality conditions — 19
- 2.3 Exercises — 22

3 Value distribution theory — 23

- 3.1 The Poisson–Jensen formula — 23
- 3.2 The Nevanlinna characteristic function — 25
- 3.3 The second fundamental theorem of Nevanlinna — 31
- 3.4 Exercises — 39

4 Periodic points — 40

- 4.1 Attracting and repelling fixed points — 40
- 4.2 The basin of attraction — 43
- 4.3 Rationally neutral fixed points — 44
- 4.4 Periodic orbits — 53
- 4.5 Exercises — 56

5 Local conjugacy — 57

- 5.1 Local linearization for an attracting point — 57
- 5.2 Local conjugacy for a superattracting point — 60
- 5.3 Local conjugacy for a parabolic fixed point — 63
- 5.4 Irrationally indifferent points — 67
- 5.5 Continued fractions — 72
- 5.6 Exercises — 75

6 The Fatou and Julia sets — 77

- 6.1 Definitions and examples — 77
- 6.2 Properties of $\mathbb{J}(f)$ and $\mathbb{F}(f)$ — 79
- 6.3 Fatou exceptional values — 82
- 6.4 The escaping set — 87
- 6.5 Polynomial functions — 92
- 6.6 The quadratic family — 96
- 6.7 Exercises — 96

7 Fatou components — 98

- 7.1 Fatou components. Classification — 98
- 7.2 Multiply connected components — 99
- 7.3 Limit functions — 104
- 7.4 Nonconstant limit functions — 107
- 7.5 Baker domains — 110
- 7.6 Wandering domains — 112
- 7.7 Exercises — 113

8 Singular values — 115

- 8.1 Singular values — 115
- 8.2 Singular values and Fatou components — 120
- 8.3 Special classes of entire functions — 123
- 8.4 Permutable functions — 124
- 8.5 Completely invariant components — 125
- 8.6 Connectivity of Julia sets — 126
- 8.7 Exercises — 127

9 The exponential family — 129

- 9.1 Periodic points — 129
- 9.2 Symbolic dynamics — 132
- 9.3 The Julia set of E_λ for $0 < \lambda < 1/e$ — 134
- 9.4 The Cantor bouquet when $0 < \lambda < 1/e$ — 139
- 9.5 Hairs in the dynamical plane — 142
- 9.6 The explosion of the exponential — 143
- 9.7 Exercises — 145

10 The parameter plane — 147

- 10.1 Introduction — 147
- 10.2 The parameter plane — 147
- 10.3 The Mandelbrot set — 150
- 10.4 The parameter plane of the exponential family — 154
- 10.5 Exercises — 156

11	Convergence and dynamics — 157
11.1	The Hausdorff metric — 157
11.2	Convergence of attracting orbits — 160
11.3	Convergence of Julia sets — 163
11.4	Approximation of λe^z by $\lambda(1 + z/N)^N$ — 165
11.5	Exercises — 166
A	Univalent functions in the disc — 169
A.1	Area formula. Consequences — 169
A.2	Exercises — 171
B	The Newton method — 173
B.1	The Newton method — 173
B.2	The problem of Cayley — 173
B.3	The cubic equation — 175
B.4	Examples — 175
B.5	Exercises — 176
C	Computer graphics of complex dynamics — 179
C.1	Matlab images — 179
C.2	RGB images of filled Julia sets — 180
C.3	Pcolor images — 183
C.4	The inverse iteration method — 184
C.5	Gallery — 186
D	Hints to selected exercises — 193
	Bibliography — 199
	Index — 203
