

# Structural Synthesis of Parallel Robots

## Part 1: Methodology

By

GRIGORE GOGU

*Mechanical Engineering Research Group,  
French Institute of Advanced Mechanics and  
Blaise Pascal University, Clermont-Ferrand, France*

# Contents

<b>Preface .....</b>	<b>IX</b>
Acknowledgements .....	XIV
List of abbreviations and notations.....	XV
 <b>1 Introduction.....</b>	 <b>1</b>
1.1 Robot .....	1
1.2 Robotics .....	7
1.3 Parallel Robot .....	10
1.4 Terminology .....	10
1.5 Structural synthesis.....	23
1.6 The objectives and originality of this book .....	25
 <b>2 Structural parameters .....</b>	 <b>31</b>
2.1 Critical review of mobility calculation .....	32
2.1.1 Chebychev's contribution.....	35
2.1.2 Sylvester's contribution.....	36
2.1.3 Grübler's contribution .....	36
2.1.4 Somov's contribution .....	37
2.1.5 Hochman's contribution .....	37
2.1.6 Somov-Malytsheff's formula .....	38
2.1.7 Koenigs' formula.....	39
2.1.8 Kutzbach's mobility equation.....	39
2.1.9 Dobrovolski's mobility equation .....	40
2.1.10 Contribution of Y.F. Moroskine .....	40
2.1.11 Contribution of R. Voinea and M. Atanasiu.....	41
2.1.12 Kolchin's mobility equation .....	42
2.1.13 Rössner's contribution.....	42
2.1.14 Boden's mobility equation.....	42
2.1.15 Manafu's formula .....	43
2.1.16 Ozol's formula .....	43
2.1.17 Contribution of K. J. Waldron .....	44
2.1.18 Contribution of N. Manolescu .....	44
2.1.19 Contribution of C. Bagci .....	45

2.1.20 Contribution of P. Antonescu .....	46
2.1.21 Contribution of F. Freudenstein and R. Alizade .....	47
2.1.22 Hunt's contribution .....	48
2.1.23 Hervé's contribution .....	49
2.1.24 Gronowicz's contribution .....	50
2.1.25 Baker's contribution .....	50
2.1.26 Davies's contribution .....	51
2.1.27 Contribution of V.P. Agrawal and J.S. Rao .....	52
2.1.28 Contribution of J. Angeles and C. Gosselin .....	52
2.1.29 Contribution of F. Dudiță and D. Diaconescu .....	53
2.1.30 Contribution of P. Fanghella and C. Galletti .....	55
2.1.31 Fayet's contribution .....	55
2.1.32 Tsai's formula .....	56
2.1.33 McCarthy's formula .....	56
2.1.34 Contribution of Z. Huang, L.F. Kong and Y.F. Fang .....	57
2.1.35 Contribution of J.M. Rico, J. Gallardo and B. Ravani .....	57
2.2 Chebychev-Grübler-Kutzbach mobility formulae .....	58
2.2.1 The original Chebychev-Grübler-Kutzbach formula .....	58
2.2.2 The extended Chebychev-Grübler-Kutzbach formula .....	61
2.2.3 Limits of applicability of CGK formulae .....	62
2.3 Mobility and connectivity of parallel robots .....	78
2.3.1 General definitions and formulae for mobility and connectivity of mechanisms .....	79
2.3.2 Mobility and connectivity of simple open kinematic chains ...	82
2.3.3 Mobility and connectivity of single-loop kinematic chains .....	88
2.3.4 Connectivity between two elements of a single-loop kinematic chain .....	96
2.3.5. Mobility and connectivity of parallel robots with simple limbs .....	100
2.3.6. Mobility and connectivity of parallel robots with complex limbs .....	109
2.3.7. General formulae for robot mobility and connectivity .....	114
2.4 Overconstraints in parallel robots .....	120
2.5 Redundancy in parallel robots .....	125
2.6 General formulae for structural parameters .....	127
<b>3 Structural analysis .....</b>	<b>131</b>
3.1 Simple open kinematic chains .....	131
3.2 Single-loop kinematic chains .....	137
3.3 Parallel mechanisms with simple limbs .....	148
3.4 Parallel mechanisms with complex limbs .....	168
3.5 Other multi-loop kinematic chains .....	228

---

<b>4 Kinematic analysis .....</b>	<b>235</b>
4.1. Decoupling in axiomatic design .....	236
4.2. Geometric modeling .....	238
4.3 Kinematic modeling .....	241
4.3.1 Direct and inverse kinematics matrices used in Jacobian calculation.....	242
4.3.2 Design and conventional Jacobian matrices .....	243
4.4 Types of workspaces and singularities .....	248
4.4.1 Types of workspaces .....	248
4.4.2 Types of singularities.....	249
4.5. Kinetostatic performance indices .....	253
4.5.1 Cross-coupling indices .....	256
4.5.2 Indices of input-output propensity.....	262
4.5.3 Kinetostatic indices defined in connection with manipulability ellipsoids and polytops .....	266
4.6 Design Jacobian and motion decoupling .....	274
4.6.1. Parallel robots with coupled motions .....	276
4.6.2. Parallel robots with decoupled motions.....	285
4.6.3. Parallel robots with uncoupled motions .....	293
4.6.4. Maximally regular parallel robots .....	296
<b>5 Structural synthesis .....</b>	<b>299</b>
5.1 Structural synthesis: a systematic approach in mechanism design.....	299
5.2. Morphological and evolutionary approaches.....	304
5.2.1 Morphological approaches .....	305
5.2.2 Evolutionary algorithms .....	307
5.3 Evolutionary morphology.....	310
5.3.1 Design objectives.....	310
5.3.2 Constituent elements.....	311
5.3.3 Morphological operators.....	313
5.3.4 Set of solutions .....	314
5.3.5 General structure of the evolutionary morphology.....	314
5.4 General approach to structural synthesis of parallel robots.....	317
5.4.1 General conditions for structural synthesis of parallel robots via theory of linear transformations.....	317
5.4.2 General approach to structural synthesis of parallel robots via evolutionary morphology .....	319
<b>6 Limbs with two degrees of connectivity.....</b>	<b>329</b>
6.1 Limbs with two translational motions .....	329
6.2 Limbs with two rotational motions.....	333
6.3 Limbs with one translational and one rotational motion .....	334

6.4 Other limbs with two degrees of connectivity .....	335
6.5 Redundant limbs with two degrees of connectivity .....	338
<b>7 Limbs with three degrees of connectivity .....</b>	<b>341</b>
7.1 Limbs with three translational motions .....	341
7.2 Planar limbs with one rotational and two translational motions...	352
7.3 Non planar limbs with one rotational and two translational motions .....	359
7.4 Limbs with one translational and two rotational motions.....	364
7.5 Limbs with three rotational motions.....	364
7.6 Other limbs with three degrees of connectivity .....	365
7.7 Redundant limbs with three degrees of connectivity .....	375
<b>8 Limbs with four degrees of connectivity .....</b>	<b>377</b>
8.1 Limbs with Schönflies motion.....	377
8.2 Limbs with two translational and two rotational motions .....	425
8.3 Limbs with one translational and three rotational motions.....	435
8.4 Other limbs with four degrees of connectivity .....	436
8.5 Redundant limbs with four degrees of connectivity .....	442
<b>9 Limbs with five degrees of connectivity .....</b>	<b>445</b>
9.1 Limbs with two rotational and three translational motions .....	445
9.2 Limbs with two translational and three rotational motions .....	637
9.3 Other limbs with five degrees of connectivity.....	644
9.4 Redundant limbs with five degrees of connectivity.....	650
<b>10 Limbs with six degrees of connectivity .....</b>	<b>653</b>
10.1 Limbs with three translational and three rotational motions .....	653
10.2 Redundant limbs with six degrees of connectivity .....	661
<b>References.....</b>	<b>665</b>
<b>Index .....</b>	<b>693</b>
