Abstract	iii
Zusammenfassung	v
Acknowledgments	vii
Contents	ix
1 Introduction	1
2 Preliminaries	5
2.1 Notation	5
2.2 Algorithms and Complexity	6
2.2.1 Problems and Algorithms	6
2.2.2 Decision Problems and the Classes P and NP	7
2.2.3 Transformations, Oracles and Reductions	8
2.2.4 Beyond NP and the Polynomial Hierarchy	9
2.3 Optimization Problems and Reformulations	11
2.4 Linear Programming	13
2.4.1 The Simplex Method	13
2.4.2 Disjunctive Programming	15
2.5 Conic Programming	16
2.5.1 Disjunctive Conic Programming	17
2.6 Mixed-Integer Programming and Branch & Cut	19
3 Notions of Robustness	21
3.1 Historic Review	21
3.2 Mixed-Integer Programs Subject to Uncertainty	27
4 Uncertainty in the Costs	35
4.1 Controlled Robustness	37
4.2 Controlled Robust Binary Optimization	42
4.3 Controlled Robust Flow Problems	44

5	Uncertainty in the Constraints	57
5.1	Reformulations for LPs and MIPs Subject to Uncertainty . .	57
5.1.1	Reformulations by Enumerating Extreme Points . .	58
5.1.2	Polynomial Reformulations	61
5.2	Linear Programs Subject to Uncertainty	65
5.2.1	Duality	65
5.2.2	Farkas' Lemma	68
5.2.3	Solution Methods for Uncertain LPs	71
5.3	Cuts for Robust Mixed-Integer Programs	74
5.3.1	Cuts from Lattice-Free Sets	74
5.4	Cuts for Generalized Mixed-Integer Programs	83
5.4.1	Cuts from Lattice-Free Sets	84
5.5	Conic Uncertainty Sets	87
5.6	Complexity of Robust Mixed-Integer Programming	92
5.6.1	Polyhedral Uncertainty	93
5.6.2	Discrete Uncertainty	94
6	Computational Results	99
6.1	Implementation	99
6.2	Shapes of Uncertainty	100
6.3	Computations	101
6.3.1	Random Instances	101
6.3.2	MIPLIB Instances	103
6.3.3	Crystallographic Instances	106
6.4	Concluding Remarks	106
	References	109
	Referenced Authors	117
	Notations	119
	Abbreviations	123
