

CONTENTS

1	Introduction	1
2	Preliminaries	5
2.1	Basic notation and definitions	5
2.2	Complexity Theory	6
2.3	Graph Theory	6
2.4	Relevant problems and results	7
2.5	Robust Optimization	10
I	Two-echelon vehicle routing	13
3	Literature Review	15
3.1	Two-echelon vehicle routing and truck-and-drone delivery	16
3.2	Two-echelon vehicle routing and public transport	18
4	Combined deliveries with two vehicle classes	21
4.1	Introducing the combined two-echelon vehicle routing problem	21
4.2	MIP formulations	24
4.3	Theoretical properties	34
4.4	Solution approaches	42
4.5	Experimental evaluation	46
5	Integrating second-echelon vehicle routing into public transport	61
5.1	The combined second-echelon vehicle routing problem	61
5.2	Complexity results	66
5.3	Algorithms	78
5.4	Computational study	85
5.5	Improving solutions for C2E-VRP	94
II	Robust flow decompositions	99
6	Introducing minimum flow decompositions	101
6.1	Related Literature	101
6.2	Foundations	103
7	Robust minimum weighted inexact flow decompositions	109
7.1	Generalized flow decomposition problem	109
7.2	Adjustable robust flow decompositions	113
7.3	Computational study	120
8	Conclusion and Future Research	133
A	Appendix	135
A.1	Experimental results	135
	Bibliography	137
	Notation	149
	Acronyms	151
