Abstract	ix
Zusammenfassung	xi
List of Symbols	xix
1 Modern Chemical Industry at a Glance	1
1.1 Importance of Continuous Flow Chemistry	2
1.1.1 Accelerating Diversification and Process Development	3
1.1.2 A Sustainable, Decentral, and Enabling Technology	4
1.1.3 Challenges of Modular Flow Chemistry	4
1.1.4 ENPRO Initiative and KoPPonA 2.0	5
1.2 Overview and Systematic of this Thesis	6
2 Theoretical Basis	11
2.1 Scales of Fluid Motion	11
2.1.1 Molecular and Statistical Dynamics	11
2.1.2 Fluid Continuum Mechanics	13
2.2 Physical Transport Equations	15
2.2.1 Computational Fluid Dynamics	15
2.2.1.1 Spatial Discretization and Numerical Diffusion . . .	17
2.2.1.2 Solution Strategies for Competitive Reaction Systems	19
2.2.2 Micro Mixing Models	21

Contents

2.2.2.1	Development of Mechanistic Models	22
2.2.2.2	Incorporation Model: A Generalized Model	24
2.3	Characterization of Mixing	27
2.3.1	Statistical Homogeneity	27
2.3.2	Test Reactions	29
2.3.2.1	Acid-Base Neutralization Reactions	32
2.3.2.2	The Villermoux-Dushman Protocol	32
2.3.2.3	Nitrosyl Iron Complexes	36
2.4	Implementation of Reaction Systems into the Incorporation Model .	37
2.4.1	Incorporation Model of the Villermoux-Dushman Protocol . .	37
2.4.2	Incorporation Model of Nitrosyl Iron Complexes	39
2.5	Optical Methods for Concentration Measurement	40
2.5.1	Laser Induced Fluorescence (LIF)	40
2.5.1.1	Confocal Laser Scanning Microscopy (CLSM)	40
2.5.1.2	Fluorescent Systems	42
2.5.2	Transmission Spectroscopy	43
2.5.2.1	UV-Vis Spectrophotometry	44
2.5.2.2	Imaging UV-Vis Spectroscopy	45
3	Capabilities of CFD Simulations in Micro Mixing Analysis	47
3.1	Numerical Methods for CFD Simulations	47
3.1.1	Governing Equations	48
3.1.2	Geometries and Boundary Conditions	49
3.1.3	Determination of Mesh Independence	50
3.1.4	Direct Numerical Simulation of Competitive Reactions	51
3.1.4.1	Adaptive Mesh Refinement	51
3.1.4.2	Solution Control	53
3.1.5	Implementation of Villermoux-Dushman Protocol	54
3.2	Results and Discussion of the CFD Simulations	56
3.2.1	Numerical Convergence and Mesh Independence	56
3.2.1.1	Mesh Independence Study for Non-Reactive Mixing	56
3.2.1.2	Mesh Independence Study for Competitive Reactions	58
3.2.2	Statistical Determination of Mixing Quality	62
3.2.2.1	CFD Simulations of Passive Tracers	62

3.2.2.2	CFD Simulations of Quasi-Instantaneous Reactions	64
3.2.3	Prediction of Selectivity with Steady-State CFD Simulations	65
3.2.3.1	CFD Simulations of the Villiermaux-Dushman Protocol	66
3.2.3.2	CFD Simulations of the Nitrosyl Iron Complex Reactions	69
4	Statistical Analysis of Micro Mixing	73
4.1	Confocal Laser Scanning Microscopy	74
4.2	Imaging UV-Vis Spectroscopy	77
4.3	Imaging UV-Vis Spectroscopy with Bromothymol Blue	79
4.4	Results of Passive Tracers and Acid-Base Reactions	82
4.4.1	Mixing Characterization with a Non-Reactive Tracer	82
4.4.2	Micro Mixing and Quasi-Instantaneous Reactions	84
4.4.2.1	Analysis of Single Products	85
4.4.2.2	Simultaneous Analysis of Multiple Absorption Characteristics	87
4.5	Micro Mixing and Acid Base Reactions	90
5	Time Scales and Micro Mixing	93
5.1	Numerical Setup of the Modified Legacy Incorporation Model	94
5.1.1	Initial and Boundary Conditions of the Villiermaux-Dushman Protocol	96
5.1.2	Determination of Characteristic Times	97
5.2	Experimental Setup of the Villiermaux-Dushman Protocol	98
5.2.1	Calibration Procedures	98
5.2.2	Inline UV-Vis Spectroscopy	99
5.2.3	Imaging UV-Vis Spectroscopy	100
5.3	Local Perspectives on the Legacy Incorporation Model	102
5.3.1	Global UV-Vis Spectroscopy with the Villiermaux-Dushman Protocol	102
5.3.2	Incorporation Model (VD Protocol)	103
5.3.3	Imaging UV-Vis Spectroscopy and Villiermaux-Dushman Protocol	105
5.3.4	Attenuation-Based Post-Processing	107

Contents

6	A Local View on Selectivity in Competitive Reactions	109
6.1	Numerical Setup of the NIC Incorporation Model	110
6.1.1	Initial and Boundary Conditions of the NIC Reactions	111
6.1.2	Definition of Characteristic Times	111
6.2	Experimental Setup of the NIC Reaction System	112
6.2.1	Chemicals and Spectroscopic Properties	114
6.2.2	Post Processing Considerations	115
6.3	Local Dependence of Selectivity on Micro Mixing	117
6.3.1	Overview of Experimental Data	117
6.3.2	Validation of Micro Mixing Times of the NIC Reaction System	118
6.3.3	Local Selectivity of NIC Reactions and Micro Mixing	120
6.3.4	Influence of Fluid Dynamics on Selectivity	123
7	Discussion of Micro Mixing Length and Time Scales	127
7.1	Test Reactions and Micro Mixing Models	127
7.1.1	The Meaning of the Villermaux-Dushman Protocol	128
7.1.2	The Importance of Local Information	129
7.1.3	Global Micro Mixing Time in Laminar Flow Systems	130
7.2	Resolving Length Scales in Direct Numerical Simulations	133
8	Concluding Remarks	135
8.1	Experimental Procedures for the Assessment of Mixing Performance	135
8.2	Numerical Approaches and Micro Mixing	137
8.3	Outlook and Further Improvements	138
	Bibliography	141
	Appendix A Supplementary Information	163
A.1	Gaining Optical Access	163
A.1.1	High Precision Machining	164
A.1.2	Selective Laser Induced Etching	165
A.2	DNS by Means of Adaptive Mesh Refinement	165
A.3	Details on Confocal Laser Scanning Microscopy	168
A.3.1	CLSM-LIF with Rhodamine B	168
A.3.2	CLSM-LIF with Fluorescein	169

A.3.3	Measurement Uncertainties of Fluorophores	170
A.4	Measurement Uncertainties of BTB measurements	171
A.5	Measurement Uncertainties of VD measurements	171
A.6	Determination of Gas Solubility by MNIC Reaction	173
A.6.1	Experimental Setup of the Chemical Degassing Method	173
A.6.2	Determination of NO Solubility in Methanol	174
A.7	Additional plots	177
Appendix B Matlab Functions for Incorporation Models		179
B.1	ODE_solver_VDP.m	179
B.2	incorporation_model_VD_main.m	183
B.3	minimum_xs.m	185
B.4	minimum_I3.m	188
B.5	ODE_solver_MNIC.m	190
B.6	incorporation_model_MD_main.m	193
B.7	minimum_S.m	195
Appendix C Matlab Functions for Imaging UV-Vis Post-processing		199
C.1	imUVVIS_BT.B.m	199
C.2	imUVVIS_NIC.m	214
Appendix D ANSYS Fluent Transcript Files		223
D.1	Adaptive Mesh Refinement for Block-Structured Meshes	223
D.2	Adaptive Mesh Refinement for Unstructured Meshes	226
Appendix E ANSYS Fluent User-Defined Functions		229
E.1	Villermoux-Dushman Reaction Kinetics	229
