

Contents

1	General Introduction	1
1.1	Green Chemistry and Sustainable Metal Catalysis	1
1.2	Introduction to C–H Activation	3
1.3	Enantioselective C–H Activation	7
1.3.1	General Considerations	7
1.3.2	Cobalt-Catalyzed Enantioselective C–H Activation	8
1.3.3	Nickel-Catalyzed Asymmetric C–H Activation	15
1.4	Renaissance of Electrochemistry in Organic Synthesis	18
1.4.1	General Considerations	18
1.4.2	Metallaelectrocatalytic C–H Activation	19
1.4.3	Asymmetric Metallaelectrocatalysis	21
2	Objectives	25
3	Results and Discussion	29
3.1	Enantioselective Nickel-Catalyzed Carboamination	29
3.1.1	Introduction	29
3.1.2	Enantioselective Nickelaelectro-Catalyzed Carboamination	31
3.1.3	Substrate and Ligand Syntheses	33
3.1.4	Evaluation of the Synthetic Utility	36
3.1.5	Temperature-Dependent NMR Study	40
3.1.6	Mechanistic Investigations	42
3.1.7	Summary	57
3.2	Enantioselective Cobalt-Catalyzed Carboacylation	59
3.2.1	Introduction	59
3.2.2	Enantioselective Cobaltaelectro-Catalyzed C–H Annulation	60

3.2.3	Ligand Synthesis	61
3.2.4	Substrate Scope	62
3.2.5	Mechanistic Investigations	65
3.2.6	Cobalt-Catalyzed Carboacylation vs. Nickel-Catalyzed Carboamination	77
3.2.7	Summary	78
3.3	Cobalt/electro-Catalyzed Synthesis of Chiral Azo-Compounds	80
3.3.1	Introduction	80
3.3.2	Substrate Syntheses	81
3.3.3	Scope of the Catalytic Reaction	81
3.3.4	Summary	83
4	Conclusion and Outlook	85
