

Table of Contents

Table of Contents	ii
Table of Figures	iv
Table of Tables	vi
List of Abbreviations.....	vii
Glossary.....	viii
1 Introduction	1
1.1 Context for automation systems	2
1.2 Enablers for automation systems to model context	3
1.2.1 Convergence of automation systems to cyber-physical systems	4
1.2.2 Virtual system representation	5
1.2.3 The application of learning methods in automation systems.....	6
1.2.4 Interim summary and preliminary goal setting.....	8
1.3 Challenges for context elicitation for automation systems.....	8
1.4 Thesis goal	10
1.5 Delimitations.....	11
1.6 Design science	12
1.7 Thesis structure	13
2 Underlying concepts related to context for automation systems	14
2.1 Objective.....	14
2.2 Categories of automation systems	14
2.3 Cyber-physical components of an automation system	15
2.4 The Digital Twin.....	16
2.5 The Function-Behavior-Structure paradigm to a virtual system representation.....	18
2.6 Formal Knowledge Representation	19
2.6.1 Ontologies.....	19
2.6.2 Graph data models	23
2.6.3 Knowledge graphs	26
2.6.4 Knowledge graphs as a representation for Digital Twins.....	26
2.6.5 Interim summary of foundational definitions	27
2.7 The evolution of context-aware systems	28
2.7.1 Divergent definitions of context	28
2.7.2 The context lifecycle.....	29
2.8 State of the Art regarding context modeling for automation systems	30
2.8.1 Related work on context-awareness for cyber-physical systems.....	30
2.8.2 Evaluation with regard to the thesis goal.....	41
2.1.2 Conclusion and underlying decisions	44

3	A methodology for dynamic context modeling using semantically enriched property graphs	46
3.1	Objective.....	46
3.2	Overview.....	46
3.2.1	Step 1: Context identification	47
3.2.2	Step 2: Data acquisition and preprocessing	54
3.2.3	Step 3: Context modeling.....	57
3.2.4	Step 4: Context learning.....	65
3.2.5	Step 5: Model access and application	68
3.3	A middleware-based architecture for the proposed process	69
3.3.1	Data layer	71
3.3.2	Context middleware	71
3.3.3	Service layer.....	72
3.4	Chapter summary	73
4	Realization	74
4.1	Objective.....	74
4.2	Realization decisions	74
4.2.1	Data layer	74
4.2.2	Context middleware	75
4.2.3	Service layer.....	75
4.3	Use cases and evaluation strategy.....	76
4.4	User-centered medication assistance system	77
4.4.1	Overview.....	77
4.4.2	Use case description.....	78
4.4.3	Evaluation with regard to thesis goal.....	85
4.5	Context-aware system diagnosis.....	86
4.5.1	Overview.....	86
4.5.2	Use case description.....	87
4.5.3	Evaluation with regard to requirements	92
4.6	Decision-support for flexible manufacturing systems	94
4.6.1	Overview.....	94
4.6.2	Use case description.....	94
4.6.3	Evaluation with regard to requirements	99
4.7	Overall evaluation.....	100
5	Conclusions	103
