I	Fundamentals	1
1	Introduction	2
	<i>J. Troitzsch</i>	
1.1	Historical review	2
1.2	The present situation	3
2	Market Situation	6
	<i>J. Troitzsch</i>	
3	The Burning Process	11
3.1	Fire	11
3.2	Fire determining parameters	12
3.3	The flame	13
4	The Burning of Plastics	16
	<i>J. Troitzsch</i>	
4.1	The combustion process	16
4.1.1	Heating	16
4.1.2	Decomposition	16
4.1.3	Ignition	17
4.1.4	Flame spread	18
4.2	Thermal properties and burning behaviour of the most important plastics	20
4.2.1	Thermoplastics	21
4.2.1.1	Polyolefins	21
4.2.1.2	Styrene polymers	23
4.2.1.3	Polyvinyl and polyvinylidene chlorides	23
4.2.1.4	Fluorocarbon polymers	24
4.2.1.5	Poly(meth) acrylates	24
4.2.1.6	Polyamides	25
4.2.1.7	Polyalkylene terephthalates	25
4.2.1.8	Polycarbonate	26
4.2.1.9	Polyacetals	26
4.2.2	Foam plastics	27
4.2.2.1	Polystyrene foam	28
4.2.2.2	Polyvinyl chloride foams	28
4.2.2.3	Polyurethane foams	28
4.2.2.4	Phenolic foams	30
4.2.2.5	Urea foams	30
4.2.3	Thermosetting plastics	31
4.2.3.1	Phenolic resins	31
4.2.3.2	Unsaturated polyester resins	32
4.2.3.3	Epoxy resins	33
4.2.3.4	Urea and melamine resins	33

4.2.4	High temperature resistant plastics	35
4.2.4.1	Aromatic and heterocyclic polymers	35
4.2.4.2	Inorganic polymers	40
5	Fire Retardant Plastics	43
	<i>J. Troitzsch</i>	
5.1	Flame retardants	43
5.1.1	Mode of action	43
5.1.1.1	Physical action	43
5.1.1.2	Chemical action	43
5.1.2	The most important flame retardants.	44
5.1.2.1	Halogen-containing flame retardants	44
5.1.2.2	Phosphorus-containing flame retardants	47
5.1.2.3	Inorganic flame retardants	50
5.1.3	Intumescent coatings as flame retardants for plastics	52
5.2	The most important fire retardant plastics	53
5.2.1	Plastics with all-carbon backbones	56
5.2.1.1	Polyolefins	56
5.2.1.2	Polyvinyl chloride	56
5.2.1.3	Polystyrene, styrene copolymers and polystyrene foam	57
5.2.2	Plastics with a heterogeneous backbone	57
5.2.2.1	Polyurethane foam	57
5.2.2.2	Thermosetting resins	59
5.2.2.3	Engineering plastics	60
6	Smoke Development.	63
	<i>J. Troitzsch</i>	
6.1	Constitution of smoke	63
6.2	Formation of smoke	64
6.3	Smoke production from the most important plastics	65
6.4	Smoke suppressants	67
6.4.1	Mode of action	67
6.4.1.1	Condensed phase	68
6.4.1.2	Gas phase	68
6.5	Smoke suppressants in plastics	68
6.5.1	Polyvinyl chloride	69
6.5.2	Styrene polymers	71
6.5.3	Unsaturated polyester resins	72
6.5.4	Polyurethane foams	72
6.5.5	Miscellaneous	73
7	Methodology of Fire Testing	75
	<i>W. Becker, J. Troitzsch</i>	
7.1	Assessment of the fire hazard.	75
7.2	Historical development of fire testing.	76
7.3	Terminology	77
7.4	Test methods for assessing the fire hazard	78
7.4.1	Laboratory-scale tests	79
7.4.2	Large-scale tests	81

7.4.3	Correlation of test methods	83
7.5	Fire dynamics and fire scenarios	84
II	National and International Fire Protection Regulations and Test Procedures.	87
8	Regulations and Testing	88
	<i>W. Becker, H. Rupprecht, J. Troitzsch</i>	
8.1	Sets of regulations	88
8.2	Overview of the subject	90
8.3	Test methods.	91
9	Building	93
	<i>W. Becker, H. Rupprecht, J. Troitzsch</i>	
9.1	Introductory remarks	93
	AMERICA	
9.2	United States of America	100
9.3	Canada.	111
	EUROPE	
9.4	Austria	120
9.5	Benelux	126
9.6	Czechoslovakia	134
9.7	Federal Republic of Germany	139
9.8	France	154
9.9	German Democratic Republic	166
9.10	Great Britain and Northern Ireland	177
9.11	Hungary	189
9.12	Italy	194
9.13	Nordic countries	201
9.14	Spain.	226
9.15	Switzerland	232
9.16	USSR	239
9.17	Yugoslavia	247
	AUSTRALIA/ASIA	
9.18	Australia	249
9.19	Peoples' Republic of China.	256
9.20	Japan	259
	ISO	
9.21	International Organization for Standardization (ISO)	269
9.21.1	Introduction	269
9.21.2	ISO/TC 92. Fire tests on building materials, components and structures	271
9.21.3	Future developments.	283
10	Transportation, Transport and Storage of Hazardous Materials	285
	<i>H.-J. Bönnold</i>	
10.1	Motor vehicles	285
10.1.1	Statutory regulations	285

10.1.2	Technical fire protection requirements and tests	288
10.1.3	Future developments	298
10.2	Rail vehicles	299
10.2.1	Statutory regulations	300
10.2.2	Technical fire protection requirements and tests in the Federal Republic of Germany.	300
10.2.3	International fire performance tests and requirements	305
10.2.4	Future developments	309
10.3	Aircraft	310
10.3.1	Statutory regulations	311
10.3.2	Technical fire protection requirements and tests	312
10.3.3	Technical fire requirements in the conditions of supply of the aviation industry – additional requirements relating to smoke density and toxicity of combustion products	319
10.3.4	Future developments	321
10.4	Ships	322
10.4.1	Statutory regulations	323
10.4.2	Technical fire protection requirements	324
10.4.3	Technical fire tests	327
10.4.4	Future developments	334
10.5	Transport and storage of hazardous materials	335
10.5.1	Statutory regulations	338
10.5.2	Technical fire protection requirements	340
10.5.3	Future developments	342
11	Electrical Engineering	344
	<i>W. Kaufmann, F. H. Prager, H.-W. Schiffer</i>	
11.1	United States of America	345
11.1.1	Test and approval procedures of the Underwriters' Laboratories	345
11.1.2	UL 94. Flammability tests	346
11.1.3	UL Standards 746A and 746C	351
11.2	Federal Republic of Germany	353
11.2.1	VDE regulations	353
11.2.2	Fire safety tests in the VDE regulations	354
11.3	Western Europe	367
11.3.1	BS 738. Naked flame test and determination of ignition temperature.	368
11.3.2	Oxygen index test	368
11.3.3	French test methods for smoke density, corrosivity and toxicity of fire gases	369
11.3.4	Cable tests according to NF C 32–070	370
11.4	International electrotechnical standardisation	372
11.4.1	Objectives and organisation	372
11.4.2	Fire safety test methods in IEC regulations	373
11.5	Other fire safety test methods	374
11.6	Future developments.	375
12	Furniture and Furnishings	379
	<i>F. H. Prager, J. Troitzsch</i>	
12.1	Introduction	379

12.2 Regulations and test methods	383
12.3 Future developments.	394
III Methods for Testing Secondary Fire Effects	399
13 Preliminary Remarks	400
14 Smoke Development of Fire Gases	402
<i>H. Sand, J. Troitzsch</i>	
14.1 Smoke measurement.	402
14.1.1 Mechanical methods	402
14.1.2 Electrical methods	404
14.1.3 Optical methods	404
14.2 The main optical methods of measuring smoke density.	406
14.2.1 Specific tests	408
14.2.2 Multipurpose test equipment	417
14.3 Trends and developments in methods for measuring smoke density	426
14.3.1 Modified NBS smoke chamber	427
14.3.2 Testing smoke development with the ISO smoke box.	427
14.3.3 Japanese JIS draft for testing the smoke development of plastics . .	429
15 Toxicity of Fire Gases	433
<i>H. Sand, J. Troitzsch</i>	
15.1 Introduction	433
15.2 Methods for assessing the hazard of toxic fire gases	433
15.2.1 Concept of lethality	435
15.2.2 Concept of incapacitation	436
15.2.3 Further methods	437
15.3 Testing the toxicity of thermal decomposition products according to DIN 53 436.	437
15.4 Testing the toxicity of combustion gases according to Japanese Notifica- tion No. 1231 of the Ministry of Construction	439
15.5 Fire gas toxicity modeling	441
16 Corrosivity of Fire Gases	443
<i>H. Sand, J. Troitzsch</i>	
16.1 Overview	443
16.2 Principles of corrosion and mitigation	444
16.3 Methods for assessing corrosivity of fire gases	448
IV Appendix	450
1 Suppliers of Flame Retardants and Smoke Suppressants	451
2 Abbreviations for Plastics	459
3 Terminology of Fire Protection	460

3.1	Definitions of terms connected with fire protection	461
3.2	English, German and French terms frequently used in connection with fire protection	463
4	International and National Standards Organisations	468
5	Electrotechnical Safety and Standards Organisations in Europe and Overseas . .	474
6	Abbreviations	478
7	Journals and Books	488
	Index to Standards	491
	Author Index	497
	Key Word Index	499
