

Contents

References.....	4
1 Introduction	8
2 Evaluated Time and Time Numbers.....	10
3 Review of Schrödingers Equation.....	16
4 Elementary Examples	17
4.1 Free Particle	18
4.2 A More General Example with Nonvanishing Potential V.....	19
5 The Wave Function as a Circular Flow	20
5.1 Circulation of the Wave Function Due to Norm Conservation.....	21
5.2 Circular Flow Shown by WKBJ- and EBK-Approximation.....	22
5.2.1 WKBJ-Approximation	22
5.2.2 EBK-Approximation	23
5.3 Flows with Drift.....	24
6 Time Structure in Quantum Theory: From Ritz to Hestenes	26
6.1 Ritz's Combination Principle as Time Geometry	26
6.2 De Broglie's Coherence Condition, Not a Matter-Wave Duality	26
6.3 Hestenes' Clifford-Algebra Clock.....	28
6.4 Historical Context of Quantum Mechanics	29
7 Hidden Variable and the Incompleteness of Quantum Mechanics – The Phase of the Wave Function	30
8 Revision of the Axiomes of the Quantum Mechanics	33
9 Quantum Mechanics as a Cross-Scale Theory of Time.....	38
9.1 Proper Time and the Phase of the Wave Function.....	38
9.2 The Cross-Scale Character of the Schrödinger Equation.....	40
10 Empirical Probes - Time Selection and Temporal Coherence in Quantum Mechanics	40
10.1 General model (Interference, Spectra, and Time Trigger)	42
10.2 Case analysis: interference pattern	42
10.3 Case analysis: Spectral Line Shapes.....	43
10.4 Case analysis: Decay Statistics (Generalized Born's Rule)	43
10.5 Practical considerations and data accumulation.....	44
Conclusion	45
