List of variables and abbreviations..... 9

Abstract 11

Zusammenfassung 17

1 Introduction 23

1.1 Motivation 23

1.2 Methodological approach 28

2 State of the Art..... 31

2.1 VEPZO model 31

2.2 Radiative heat exchange..... 33

2.2.1 Blackbody emissive power 33

2.2.2 Gray body 34

2.2.3 View factor..... 37

2.3 Convection 45

3 Model Development..... 46

3.1 Development of RADZO model..... 46

3.1.1 Meshing of zonal surfaces 47

3.1.2 View factor matrix computation..... 48

3.1.3 Obstruction check 49

3.1.4 Radiation node model 51

3.1.5 Accuracy assessment of view factor computation..... 51

3.2 Development of CONZO model 55

3.2.1 Calibration test setup 58

3.2.2 Model calibration 59

3.3 Integration of RADZO and CONZO with VEPZO 62

- 4 Model Validation and Evaluation 65**
 - 4.1 Box : Radiation model validation 67
 - 4.1.1 Box : Validation cases 67
 - 4.1.2 Theoretical rationale for experiment 67
 - 4.1.3 Box : Model validation and evaluation 68
 - 4.2 Cockpit Mockup 71
 - 4.2.1 Cockpit : Experimental setup 71
 - 4.2.2 Cockpit : Validation cases 74
 - 4.2.3 Cockpit : Simulation model 75
 - 4.2.4 Cockpit : Model validation and evaluation 76
 - 4.3 Cabin Mockup 84
 - 4.3.1 Cabin : Experimental setup 84
 - 4.3.2 Cabin : Validation cases 87
 - 4.3.3 Cabin : Simulation model 88
 - 4.3.4 Cabin : Model validation and evaluation 90
 - 4.4 Empennage Mockup 100
 - 4.4.1 Empennage : Experimental setup 100
 - 4.4.2 Empennage : Validation cases 104
 - 4.4.3 Empennage : Simulation model 104
 - 4.4.4 Empennage : Model validation and evaluation 107
- 5 Application Example: Predicting Thermal Comfort in an Electric Vehicle Cabin 113**
 - 5.1 Automotive Cabin : Experimental setup 114
 - 5.2 Automotive Cabin : Model Validation 115
 - 5.3 Automotive Cabin : Model validation for thermal comfort 118
 - 5.4 Simulation based evaluation of energy demand 120
- 6 Evaluation of Method 121**
- 7 Conclusion and Outlook 123**
- 8 References 125**
