About the Authors *xiii*

Preface *xv*

Acknowledgment *xvii*

1	Introduction to Proton Exchange Membrane Fuel Cells	1
1.1	Overview of Proton Exchange Membrane Fuel Cells Technology	1
1.1.1	Brief History and Development of Proton Exchange Membrane Fuel Cell	1
1.1.2	Need for H ₂ -Powered Fuel Cell Technology in Today's World	2
1.2	Key Components of Proton Exchange Membrane Fuel Cell	6
1.2.1	Catalyst Layer	6
1.2.2	Gas Diffusion Layer	9
1.2.3	Proton Exchange Membrane	10
1.2.3.1	Proton Transport Mechanisms	11
1.2.3.2	Classification of PEM	14
	References	16
2	Classification of Catalyst for Proton Exchange Membrane Fuel Cell	23
2.1	State-of-the-Art Electrocatalysts	23
2.1.1	Pt-Alloy Electrocatalysts	23
2.1.2	Carbon-Supported Transition Metal Catalysts (M-N-C)	25
2.1.3	MXene-Based ORR Catalysts	26
2.1.4	Metal-Organic Framework Electrocatalysts	27
2.1.5	Carbon-Based Metal-Free Electrocatalyst	28
2.2	Fabrication of Catalyst Layers (CL) in Proton Exchange Membrane Fuel Cell	29
2.2.1	GDE Membrane Electrode	29
2.2.2	Catalyst-Coated Membrane Electrode	31

2.2.3	Ordered Membrane Electrode	32
2.3	Conclusion	33
	References	33
3	Electrospun Catalyst Layer for Proton Exchange Membrane Fuel Cell	39
3.1	Introduction	39
3.2	Materials Preparation	39
3.2.1	Preparation of Nanofiber Catalyst Layers	39
3.3	Preparation and Electrochemical Characterization	41
3.3.1	Preparation of Single Cell	41
3.3.2	Polarization Curve Testing ($V-I$)	42
3.3.3	Cyclic Voltammetry Testing	42
3.3.4	Linear Sweep Voltammetry Testing	43
3.3.5	Electrochemical Impedance Spectroscopy Testing	43
3.4	Results and Discussion	44
3.4.1	Polarization Curve ($V-I$) of Preconditioning Process	44
3.4.2	Electrochemical Impedance Spectroscopy of Preconditioning Process	46
3.4.3	Impedance Fitting Data of Preconditioning Process	48
3.4.4	Electrochemically Active Surface Area of Preconditioning Process	49
3.4.5	Exchange Current Density of Preconditioning Process	49
3.4.6	Mechanism of Activation Process	51
3.5	Conclusion	53
	References	54
4	Analysis of Nanofiber Catalyst Layers Performance Under Various Temperature and Humidity Conditions	57
4.1	Introduction	57
4.2	Materials Preparation	57
4.3	Result and Discussion	57
4.3.1	Polarization Curves ($V-I$) at Constant Temperature and Different Humidity Levels	57
4.3.2	Polarization Curves ($V-I$) at Different Temperatures and Constant Humidity	59
4.3.3	Polarization Curves and Loss Separation at Different Temperatures and Humidity	61
4.4	Conclusion	63
	References	64

5	The Role and Performance of Gas Diffusion Layers in Proton Exchange Membrane Fuel Cell	67
5.1	Introduction	67
5.2	Research on Gas Diffusion Layer and Water/Gas Transport Mechanisms	68
5.2.1	Research on Microporous Layer	72
5.3	Conclusion	75
	References	75
6	Preparation of Gradient Gas Diffusion Layer Process and Their Performance in Fuel Cell	79
6.1	Introduction	79
6.2	Materials Preparation	79
6.2.1	Effect of Ultrasonic Time on Gas Diffusion Layer Preparation	79
6.2.2	Effect of Polytetrafluoroethylene Addition Sequence	80
6.2.3	Investigation of Ethanol Content and Heating Plate Temperature	80
6.2.4	Preparation and Testing of Gradient Gas Diffusion Layer	80
6.3	Results and Discussion	81
6.3.1	Hydrophobicity	81
6.3.2	Water Permeability and Conductivity	81
6.3.3	Pore Size Distribution	83
6.3.4	Pore Volume Distribution	84
6.3.5	Surface Roughness	85
6.3.6	Surface Morphology	86
6.3.7	Polarization Curve and Power Density	88
6.3.8	Electrochemical Impedance Spectroscopy Test	91
6.4	Conclusion	92
	References	92
7	Impact of Optimizing the Thickness Direction of Gradient Gas Diffusion Layer on Water-Gas Management Capability of the Fuel Cell	95
7.1	Introduction	95
7.2	Materials Preparation	95
7.2.1	Preparation Process of Gradient Gas Diffusion Layers	95
7.3	Results and Discussion	96
7.3.1	Physical Characterizations	97
7.3.2	Analysis of Polarization Curve (I-V)	98
7.3.3	Analysis of Power Density	100
7.3.4	Water Transport Mechanism	101

7.3.5	Comparison of Capillary Pressure Differences in Gas Diffusion Layers with Varying Thicknesses	101
7.3.6	Electrochemical Impedance Spectroscopy	103
7.3.7	Polarization Curve Reproducibility	104
7.4	Conclusion	104
	References	105
8	Study on the Effect of Gradient Hydrophobic Treatment of Gas Diffusion Layer on Water Management Performance in Fuel Cells	107
8.1	Introduction	107
8.2	Materials Preparation	107
8.3	Results and Discussion	108
8.3.1	Analysis of Polarization Curve (I-V)	108
8.3.2	Analysis of Power Density	109
8.3.3	Analysis of Electrochemical Impedance Spectroscopy	110
8.3.4	Analysis of Physical Performance	110
8.3.5	Verifying the Effect of Gradient Hydrophobic Gas Diffusion Layers with Different Polytetrafluoroethylene/Carbon Black Ratios in Fuel Cells	112
8.3.5.1	Analysis of Polarization Curve	112
8.3.5.2	Analysis of Power Density	113
8.3.5.3	Analysis of Electrochemical Impedance Test Results	114
8.4	Comparison of Membrane Electrodes	114
8.5	Conclusion	115
	References	115
9	Fundamentals of Proton Exchange Membranes	117
9.1	Introduction	117
9.1.1	Partially Fluorinated Proton Exchange Membranes	118
9.1.2	Fluorine-Free Proton Exchange Membranes	119
9.1.3	Sulfonated Polysulfone Proton Exchange Membranes	120
9.1.4	Sulfonated Polyaryletherketone Proton Exchange Membranes	121
9.1.5	Sulfonated Polyimide Proton Exchange Membranes	124
9.2	Conclusion	125
	References	126
10	Design of Proton Exchange Membrane	131
10.1	Introduction	131
10.2	Design of Molecular Structure	132
10.3	Physical and Chemical Cross-Linking Modification	134
10.4	Enhancing Stability and Performance Through Chemical Cross-Linking	136

10.5	Modulating the Structure of Ordered Microporous Materials	141
10.6	Construction of Novel Proton Transport Channels	145
10.7	Conclusion	147
	References	148
11	Highly Sulfonated Poly(Ether Ether Ketone) Nanofibers Constructed Plasmonic Transport Channels	155
11.1	Introduction	155
11.2	Materials Preparation	156
11.2.1	Preparation of Sulfonated Poly(Ether Ether Ketone) with Different Degrees of Sulfonation	156
11.2.2	Substitution of Counteracting Ions	156
11.2.3	Preparation of Sulfonated Poly(Ether Ether Ketone) Nanofibers	157
11.2.4	Preparation of Nanofiber Composite Membranes	157
11.2.5	Thermal Cross-Linking of Nanofiber Composite Membranes	158
11.3	Results and Discussion	158
11.3.1	Preparation of Sulfonated Poly(Ether Ether Ketone) and Characterization of Nanofibers	158
11.3.2	Cross-Sectional Morphology of Fiber Composite Membranes	160
11.3.3	Chemical Structure Characterization of Composite Membranes	162
11.3.4	Mechanical Properties and Thermal Stability	163
11.3.5	Water Absorption and Solubility	164
11.3.6	Membrane Proton Conductivity	165
11.3.7	Antioxidant Stability	166
11.3.8	Fuel Cell Performance	168
11.4	Conclusion	169
	References	170
12	Polydopamine-Modified Halloysite Nanotube/Sulfonated Poly(Ether Ether Ketone) Cross-Linked Composite Membrane	173
12.1	Introduction	173
12.2	Materials Preparation	175
12.2.1	Polydopamine Coating of Halloysite Nanotubes	175
12.2.2	Sulfonation of Poly(Ether Ether Ketone)	175
12.2.3	Preparation of Thermally Cross-Linked Composite Membranes	176
12.3	Results and Discussion	176
12.3.1	Characterization of Dopamine-Modified Halloysite Nanotubes	176
12.3.2	Discussion on the Sulfonation Process of Poly(Ether Ether Ketone)	179
12.3.3	Morphological Characterization of Composite Membranes	180
12.3.4	Chemical and Physical Properties of the Composite Membranes	180
12.3.5	Ion Exchange Capacities, Water Absorption Rate, and Swelling Rate	183
12.3.6	Proton Conductivity	186

12.3.7	Fuel Cell Performance	189
12.4	Conclusion	190
	References	190
13	Construction of Ordered Proton Transport Channels with Phosphotungstic Acid Modified Magnetic Nanoparticles	193
13.1	Introduction	193
13.2	Materials Preparation	194
13.2.1	Preparation of Magnetic Nanoparticles	194
13.2.2	Preparation of Phosphotungstic Acid-Loaded Magnetic Nanoparticles	194
13.2.3	Sulfonation of Poly(Ether Ether Ketone) and Preparation of Composite Membranes	195
13.2.4	Preparation of Composite Membranes	195
13.3	Result and Discussion	196
13.3.1	Preparation and Characterization of DMNPs@HPW	196
13.3.2	Morphology of Composite Membrane Sections	201
13.3.3	Proton Conduction Pathways and Particle Distribution	202
13.3.4	Characterization of Composite Membranes X-ray Diffraction	202
13.3.5	Mechanical Properties of Composite Membranes	204
13.3.6	Ion Exchange Capacities, Water Uptake, and Swelling Ratio	205
13.3.7	Proton Conductivity of the Membranes	207
13.3.8	Fuel Cell Performance	210
13.4	Conclusion	211
	References	212
14	Chemical Covalent Bonding of Silicotungstic Acid Proton Exchange Membrane	215
14.1	Introduction	215
14.2	Materials Preparation	216
14.2.1	Synthesis of 4-Phenoxyphenyl Phosphoric Acid	216
14.2.2	Synthesis of 4-Phenoxyphenyl Diethylphosphoric Acid Ester	216
14.2.3	Hydrolysis to Prepare 4-Phenoxyphenyl Phosphoric Acid	217
14.2.4	Preparation of Deficient Silicotungstic Acid Potassium	217
14.2.5	Preparation of POP-SiWA	217
14.2.6	Sulfonated Poly(Ether Ether Ketone)-Immobilized POP-SiWA	218
14.3	Results and Discussion	220
14.3.1	Characterization of POP-SiWA	220
14.3.2	Discussion on Thermal Cross-Linking and Grafting	222
14.3.3	Characterization of Cross-Linked Grafted Membranes	230
14.3.4	Ion Exchange Capacities, Water Uptake, and Swelling Ratio	232
14.3.5	Anti-Free Radical Oxidation Properties	234
14.3.6	Proton Conductivity	235

14.3.7 Fuel Cell Performance 237

14.4 Conclusion 239
