- 1 Vitamin D and Health: Historical Considerations and Current State of Research 1
 - 1.1 Misconception 1: *Vitamin D is a Vitamin* 3
 - 1.1.1 Correction 3
 - 1.1.2 Comment 3
 - 1.2 Misconception 2: *Because Rickets Has Largely Disappeared Today, Vitamin D Deficiency is No Longer Relevant to Health* 5
 - 1.2.1 Clarification 5
 - 1.2.2 Comment 6
 - 1.3 Misconception 3: *There is Scientific Evidence Refuting the Great Importance of Vitamin D for Health* 30
 - 1.3.1 Correction 30
 - 1.3.2 Comment 30
 - References 31
- 2 Vitamin D Intake with Food 33
 - 2.1 Misconception 1: *Enriching Food With Vitamin D Has No Impact on Health and Therefore Makes No Sense* 33
 - 2.1.1 Correction 33
 - 2.1.2 Comment 34

2.2	<i>Mistake 2: Under Our Living Conditions, the Vitamin D Requirement Is Fully Covered by the Diet—Even Without Taking Dietary Supplements</i>	37
2.2.1	Correction	37
2.2.2	Comment	37
2.3	<i>Misconception 3: It is a Flaw in Evolution that Breast Milk Contains Everything Infants Need for Healthy Development—With the Exception of Vitamin D</i>	40
2.3.1	Correction	40
2.3.2	Comment	40
2.4	<i>Misconception 4: It is Necessary to take Vitamin D Together with Fatty Foods to Achieve Good Absorption in the Gastrointestinal Tract</i>	42
2.4.1	Clarification	42
2.4.2	Comment	42
	References.	43
3	UV-Induced Vitamin D Production in the Skin	45
3.1	<i>Misconception 1: Vitamin D Can Be Produced in the Skin Without UV Influence</i>	46
3.1.1	Correction	46
3.1.2	Comment	46
3.2	<i>Misconception 2: Natural Sun Exposure Allows for Sufficient Vitamin D Production in Germany in All Seasons</i>	47
3.2.1	Correction	47
3.2.2	Comment	48
3.3	<i>Misconception 3: The Vitamin D Production of the Skin is Only Insignificantly Influenced by the Strength of the Ground-Level UV Radiation</i>	49
3.3.1	Correction	49
3.3.2	Comment	50
3.4	<i>Misconception 4: Skin's Vitamin-D Synthesis is Not Influenced by Age.</i>	53

3.4.1	Correction	53
3.4.2	Comment	53
3.5	Misconception 5: <i>The Synthesis of Vitamin D Lowers the Blood Cholesterol Level by Consuming Its Precursor 7-DHC.</i>	53
3.5.1	Correction	53
3.5.2	Comment	53
3.6	Misconception 6: <i>The Skin Produces Only a Few Hundred IU of Vitamin D Daily, Even Under Sufficient UV-B Influence</i>	54
3.6.1	Correction	54
3.6.2	Comment	54
3.7	Misconception 7: <i>A Healthy Person Can Produce Too Much Vitamin D From Extensive Sunbathing and Thereby Endanger Health</i>	56
3.7.1	Clarification	56
3.7.2	Comment	57
3.8	Misconception 8: <i>UV-B Irradiation of Dairy Cows Has No Effect on the Vitamin D Content of Cow's Milk.</i>	58
3.8.1	Correction	58
3.8.2	Comment	58
3.9	Misconception 9: <i>UV Irradiation of Food Has No Effect on Its Vitamin D Content</i>	59
3.9.1	Correction	59
3.9.2	Comment	59
3.10	Misconception 10: <i>The Impact of Changes in Our Vitamin D Supply on Vitamin D Status is Difficult to Estimate</i>	60
3.10.1	Clarification	60
3.10.2	Comment	60
	References.	62
4	Vitamin D, Skin Types, and Sunscreen	63
4.1	Misconception 1: <i>The Various Human Skin Types are a Whim of Evolution Without Biological Significance—And also Without Relevance for Cutaneous Vitamin D Production</i>	63

4.1.1	Correction	63
4.1.2	Comment	64
4.2	Misconception 2: <i>A Mild Sunburn is Harmless to Health.</i>	65
4.2.1	Correction	65
4.2.2	Comment	65
4.3	Misconception 3: <i>The Use of Sunscreen Does Not Reduce the UV-Induced Formation of Vitamin D in the Skin</i>	68
4.3.1	Correction	68
4.3.2	Comment	69
4.4	Misconception 4: <i>The Use of Sunscreens Poses No Health Risk.</i>	70
4.4.1	Correction	70
4.4.2	Comment	71
4.5	Mistake 5: <i>The Use of Sunscreen Does Not Pose an Environmental Burden</i>	79
4.5.1	Correction	79
4.5.2	Comment	79
4.6	Mistake 6: <i>The Right Choice of Sunscreen Protects Against the Sun Without Reducing Vitamin D Synthesis</i>	82
4.6.1	Correction	82
4.6.2	Comment	82
	References.	83
5	How Does Vitamin D Work?	87
5.1	Misconception 1: <i>The Vitamin D Formed in the Skin or Ingested with Food is Biologically Active</i>	87
5.1.1	Clarification	87
5.1.2	Comment	88
5.2	Misconception 2: <i>1,25-dihydroxyvitamin D (1,25(OH)₂D) is the Only Biologically Active Vitamin D Metabolite.</i>	88
5.2.1	Clarification	88
5.2.2	Comment	88

5.3	Misconception 3: <i>All Effects of Vitamin D Formed in the Skin Can Be Compensated by Oral Intake of Vitamin D</i>	91
5.3.1	Correction	91
5.3.2	Comment	91
	References.	92
6	What is the Optimal Vitamin D Status?	93
6.1	Misconception 1: <i>To Assess Vitamin D Status, the Blood Level of the Biologically Active Metabolite 1,25-dihydroxyvitamin D (1,25(OH)₂D) Should Be Determined. If this Value is Within the Normal Range, There is No Vitamin D Deficiency</i>	94
6.1.1	Correction	94
6.1.2	Comment	94
6.2	Misconception 2: <i>The Determination of the Serum Concentration of the Biologically Inactive Vitamin D Metabolite 25-hydroxyvitamin D (25(OH)D) is Unsuitable for Assessing a Person's Vitamin D Status</i>	96
6.2.1	Clarification	96
6.2.2	Comment	96
6.3	Misconception 3: <i>An Optimal Vitamin D Status is Assumed When the Blood Level for 25(OH)D is Above 10 ng/ml and When there is No Indication of a Disease of the Bone and Calcium Metabolism</i>	98
6.3.1	Correction	98
6.3.2	Comment	98
	References.	99
7	Conclusion with Practical Recommendations for Ensuring Good Vitamin D Supply while Safely Interacting with the Sun	101
	References.	109
