Preface — VII

Acknowledgments — IX

Author biography — XI

List of tables — XVII

List of figures — XIX

Abbreviations — XXI

1 Introduction — 1

1.1 Objective — 1

2 Hazard mitigation — 4

2.1 Hazard identification and management — 4

2.2 Mitigation of consequences of improper design or selection of materials — 5

2.3 Addressing manufacturing deficiencies — 6

2.4 Mitigation of external corrosion — 6

2.4.1 Common factors leading to external corrosion — 6

2.4.2 Strategies for mitigating external corrosion during design and construction of pipelines — 9

2.5 Internal corrosion mitigation — 13

2.5.1 Factors influencing corrosion occurring internally in gas pipeline systems — 13

2.5.2 Suggested strategies for reducing internal corrosion — 17

2.5.3 Procedures for mitigating internal corrosion during operations — 17

2.6 Third-party damage mitigation — 41

2.6.1 Public awareness — 42

2.6.2 Route selection — 44

2.6.3 Burial depth: increased depth of burial — 45

2.6.4 Additional protection — 47

2.6.5 Prohibition of planting near transmission pipelines — 47

2.6.6 Strengthening community and landowner relations — 49

2.6.7 Enhancing signage for onshore pipelines — 49

2.6.8 Right-of-way intrusion detection system — 49

2.6.9 Establishing a notification system — 51

2.6.10 Safety management — 51

2.6.11	Design factor —	52
2.6.12	Mitigating damage to aboveground pipelines caused by third parties —	53
2.7	Improper operations mitigation —	55
2.8	Mitigation from external forces —	56
2.9	Mitigation of seismic and landslide hazard —	57
2.9.1	Geohazard assessment —	57
2.9.2	Re-routing —	58
2.9.3	Pipe-soil interaction analysis —	58
2.9.4	Strain-based design —	59
2.9.5	Scheduling —	60
2.10	Leak and break detection —	60
2.10.1	Leak detection methods —	60
2.11	Strategies to reduce stress corrosion cracking in pipelines —	71
2.11.1	Material selection —	71
2.11.2	Environment —	72
2.11.3	Stress —	74
2.11.4	Coating —	75
2.11.5	Cathodic protection —	75
2.12	Hydrate mitigation —	75
2.12.1	Methods of hydrate prevention and mitigation —	76
2.12.2	Prevention of hydrate formation during commissioning —	81
2.12.3	Removing hydrates —	82
2.13	Wax —	83
2.13.1	Wax crystal modifier additives —	83
2.13.2	Replacement for wax crystal modifier additives —	84
2.14	Heavy and asphaltic crudes —	85
2.14.1	Emulsan —	85
2.15	Paraffin —	85
3	Risk assessment —	87
3.1	Objectives —	87
3.2	Risk evaluation technique —	88
3.3	Risk estimation —	88
3.4	Risk evaluation —	89
3.5	Risk significance —	89
3.5.1	Options analysis —	90
3.6	Documentation —	90
4	Investigation —	92
4.1	Incident investigation process —	92

5	Inspection, monitoring, and repair — 94
5.1	Inspection — 95
5.1.1	Internal inspection — 98
5.1.2	External inspection — 98
5.2	Mandatory monitoring — 98
5.2.1	Supplemental integrity monitoring — 99
5.2.2	General — 100
5.3	Repair — 101
5.3.1	Repair objective — 101
5.3.2	Pipeline repair standard — 102
5.3.3	Corrosion — 102
5.3.4	In-line inspection — 106
5.4	Job planning and approval — 106
6	Integrity assessment — 108
6.1	Pipeline integrity assessment plan — 108
6.2	Pipeline inspection plan — 108
6.3	Choosing the appropriate assessment method — 108
6.4	Assessment planning for pipeline integrity — 112
6.4.1	Continual assessment of pipeline integrity — 112
6.5	Defect assessment/evaluation — 113
6.6	In-line inspections — 113
6.6.1	Smart pig — 114
6.6.2	Pigging facilities — 115
6.7	Direct assessment of the pipe — 116
6.7.1	How is direct assessment carried out? — 117
6.7.2	Reference standards — 119
6.8	Hydrostatic testing — 120
6.8.1	Calculation of test pressure and duration — 120
6.8.2	Types of pressure test — 120
6.8.3	Considerations for test media – water — 122
6.8.4	Considerations for test media other than water — 122
7	Pipeline operation and maintenance — 123
7.1	Pipeline commissioning — 123
7.1.1	Pre-commissioning — 123
7.1.2	Pressure testing — 123
7.1.3	Dewatering — 124
7.1.4	Drying — 125
7.1.5	Commissioning — 125
7.2	Utilities — 126
7.3	Control and monitoring — 126

- 7.3.1 Leak detection — **127**
- 7.3.2 Corrosion monitoring — **127**
- 7.3.3 Equipment — **127**
- 7.3.4 Pipeline markers — **128**
- 7.4 Hydrate control — **128**
- 7.5 Maintenance — **128**
- 7.5.1 Physical status — **129**
- 7.5.2 Line walking — **129**
- 7.5.3 Helicopter patrols — **129**

- 8 Records and data management — 132**
- 8.1 Types of data and records — **132**
- 8.1.1 Maps and drawings — **132**
- 8.1.2 Technical data — **132**
- 8.1.3 Corrosion monitoring equipment — **133**
- 8.1.4 Licenses — **133**
- 8.1.5 Repairs — **133**
- 8.1.6 Corrosion control programs — **133**
- 8.2 Data management — **133**
- 8.3 Pipeline repair records — **134**

- 9 Competency and training — 135**
- 9.1 Requirements — **135**

- 10 Management of change — 136**
- 10.1 Objective — **136**
- 10.2 Requirements — **137**
- 10.3 Temporary changes — **137**
- 10.4 Emergency changes — **138**

- 11 Communication — 139**

- 12 Auditing — 140**
- 12.1 Auditing and continual improvement — **140**
- 12.1.1 Evaluation process — **140**
- 12.1.2 Performance measures — **140**
- 12.1.3 Program audit — **141**

- References — 143**

- Index — 145**
