Preface by the laureate of the Right Livelihood Award, Michael Succow	V
Foreword by the Food and Agricultural Organisation (FAO), Martin Frick	VI
1 Paludiculture as an inclusive solution	1
2 The limits of drainage based peatland utilisation	3
2.1 Fen peatland use in Northeast Germany	3
2.2 Drainage induced peat degradation processes	7
2.3 Impact of drainage on productivity	9
2.4 Ecosystem services of peatlands	13
3 Production and utilisation of paludiculture biomass	21
3.1 Promising plants for paludiculture	22
3.2 Edible and medical plants from paludiculture	38
3.3 The production of fodder in paludiculture	39
3.4 Material use of biomass from paludiculture	43
3.5 Solid energy from biomass	44
3.6 Liquid and gaseous biofuels	54
4 Harvest and logistics	59
4.1 Trafficability of wet and rewetted fens	59
4.2 Agricultural machinery for wet areas	64
4.3 Logistics of biomass production on wet peatlands	70
4.4 The feasibility of biomass harvest from paludiculture	76
5 Ecosystem services provided by paludiculture	79
5.1 Greenhouse gas emissions	79
5.2 Biodiversity	94
5.3 Local climate and hydrology	102
5.4 Nutrient balance and water pollution control	106
6 Economics of paludiculture	109
6.1 Economic aspects of paludiculture on the farm level	109
6.2 Certification of biomass from paludiculture	120
6.3 The creation of regional value	132
6.4 Welfare aspects of land use on peatland	134
7 Legal and political aspects of paludiculture	143
7.1 The legal framework	143
7.2 Agricultural policy	149
7.3 Control mechanisms and incentives for paludiculture	152
8 Social aspects of paludiculture implementation	157
8.1 The relationship between humans and mires over time	157
8.2 The integration of stakeholders and the public	162
8.3 Acceptance and implementation at the producer level	168
8.4 Transfer of knowledge	171

9	Sustainability and implementation of paludiculture	175
9.1	Sustainable land use	175
9.2	Availability of suitable areas	178
9.3	The decision-support tool TORBOS	185
9.4	Technical measures for implementing paludiculture.....	188
9.5	Implementation and administrative approval in Germany	194
10	Paludiculture in a global context.....	197
10.1	Global demands and international commitments	199
10.2	The global potential and perspectives for paludiculture	200
10.3	Germany – Rewetting and paludiculture in Mecklenburg-West Pomerania	204
10.4	Belarus – Biomass from rewetted peatlands as a substitute for peat and for promoting biodiversity	205
10.5	Poland – Paludiculture for biodiversity and peatland protection.....	207
10.6	Indonesia – Paludiculture as sustainable land use	217
10.7	China – Paper from the water	223
10.8	Canada – Harvesting Typha spp. for nutrient capture and bioeconomy at Lake Winnipeg.....	226
11	The way out of the desert – What needs to be done	229
11.1	Problems of peatland management and the necessity of paludiculture	229
11.2	Challenges for practice.....	230
11.3	Awareness raising and communication	231
11.4	Politics and society.....	231
11.5	Research questions.....	232
11.6	Outlook	233
