

# Contents

## **Preface — V**

## **1 Introduction — 1**

## **2 Technologies used to produce smart and functional coatings — 3**

### **2.1 Nanotechnology — 3**

#### **2.1.1 Nanoparticles — 3**

#### **2.1.2 Nanoparticles with distinct mechanical properties — 6**

#### **2.1.3 Nanoparticles with distinct electrical properties — 8**

#### **2.1.4 Nanoparticles with distinct magnetic properties — 9**

#### **2.1.5 Nanoparticles with distinct optical properties — 10**

#### **2.1.6 Chemically modified nanoparticles — 11**

### **2.2 Polyoctasilsesquioxanes (POSS) — 12**

### **2.3 Polysilazanes — 14**

### **2.4 Nano titanium dioxide — 16**

### **2.5 Vitrimers — 19**

### **2.6 Graphene and carbon nanotubes — 21**

### **2.7 Nanocellulose — 27**

### **2.8 Slippery liquid-infused porous surfaces (SLIPS) — 29**

## **3 Sol-gel technology — 32**

### **3.1 Introduction to sol-gel technology — 32**

### **3.2 The sol-gel method — 34**

### **3.3 Inorganic-organic hybrid networks — 36**

## **4 Smart and functional coatings — 38**

### **4.1 Self-cleaning coatings — 38**

#### **4.1.1 Bionic superhydrophobic and omniphobic surfaces — 38**

#### **4.1.2 Self-cleaning by photocatalytic coatings — 45**

### **4.2 Self-healing coatings — 48**

#### **4.2.1 Self-healing by microcapsules — 49**

#### **4.2.2 Self-healing by vascular systems — 52**

#### **4.2.3 Self-healing by intrinsic systems — 54**

### **4.3 Antimicrobial coatings — 56**

#### **4.3.1 Metal-based antimicrobial additives: silver, zinc, and copper and their ions — 57**

#### **4.3.2 Quaternary ammonium-based antimicrobials — 58**

#### **4.3.3 Paralene-based antimicrobials — 59**

#### **4.3.4 Hydrogels-based antimicrobials — 61**

#### **4.3.5 Modified nano-titanium dioxide — 62**

|        |                                                            |     |
|--------|------------------------------------------------------------|-----|
| 4.4    | Low surface energy coatings —                              | 63  |
| 4.4.1  | Easy to clean coatings —                                   | 65  |
| 4.4.2  | Nonstick cookware —                                        | 67  |
| 4.4.3  | Anti-graffiti coatings —                                   | 67  |
| 4.5    | Anti-fingerprint coatings —                                | 69  |
| 4.5.1  | Mechanism of the fingerprint —                             | 69  |
| 4.5.2  | Omniphobic all-repellent coatings —                        | 70  |
| 4.5.3  | Photonic anti-fingerprint coatings —                       | 71  |
| 4.5.4  | Self-cleaning anti-fingerprint coatings —                  | 72  |
| 4.6    | Optical coatings —                                         | 74  |
| 4.6.1  | Antireflection coatings —                                  | 75  |
| 4.6.2  | Antifog coatings —                                         | 78  |
| 4.6.3  | Color-changing coatings —                                  | 83  |
| 4.7    | Corrosion protection —                                     | 89  |
| 4.7.1  | Graphene in corrosion protective coatings —                | 90  |
| 4.7.2  | Inorganic nanoparticles in corrosion protective coatings — | 90  |
| 4.7.3  | Conversion coatings —                                      | 91  |
| 4.8    | Anti-icing coatings —                                      | 93  |
| 4.8.1  | Anti-icing by electric conductive coatings —               | 94  |
| 4.8.2  | Freezing point depressors —                                | 96  |
| 4.8.3  | Anti-icing by SLIPS —                                      | 99  |
| 4.8.4  | Superhydrophobic anti-icing coatings —                     | 100 |
| 4.9    | EMI shielding coatings —                                   | 100 |
| 4.9.1  | Mechanisms EMI shielding coatings —                        | 101 |
| 4.9.2  | EMI shielding coating types —                              | 103 |
| 4.10   | Abrasion and wear-resistant coatings —                     | 105 |
| 4.10.1 | Formulation optimization —                                 | 105 |
| 4.10.2 | Material selection —                                       | 106 |
| 4.10.3 | Substrate preparation —                                    | 106 |
| 4.10.4 | Postdeposition treatments —                                | 106 |
| 4.10.5 | Alternative coating techniques —                           | 106 |
| 4.10.6 | Clear coatings —                                           | 107 |
| 4.11   | Fire protective coatings —                                 | 109 |
| 4.11.1 | Structural steel protection —                              | 110 |
| 4.11.2 | Other materials' fire protection by sol-gel coatings —     | 112 |

**5 Conclusions and perspectives — 113**

**References — 117**

**Index — 131**
