|----------|------------------------------------------------------------|-----------|
| <b>1</b> | <b>Introduction</b>                                        | <b>1</b>  |
| 1.1      | Notation and standing assumptions                          | 6         |
| 1.2      | Note added in proof                                        | 6         |
| <b>2</b> | <b>Compact quantum metric spaces</b>                       | <b>9</b>  |
| 2.1      | Definitions and basic properties                           | 9         |
| 2.2      | Quantum Gromov–Hausdorff distance                          | 13        |
| 2.3      | Finitely generated projective modules                      | 18        |
| <b>3</b> | <b>Preliminaries on quantum <math>SU(2)</math></b>         | <b>23</b> |
| 3.1      | The quantum enveloping algebra                             | 24        |
| 3.2      | Twisted derivations                                        | 25        |
| 3.3      | Corepresentation theory                                    | 26        |
| 3.4      | The Haar state                                             | 27        |
| 3.5      | Circle actions                                             | 28        |
| 3.6      | Analytic elements                                          | 29        |
| 3.7      | The continuous field                                       | 32        |
| <b>4</b> | <b>Spectral geometry on quantum <math>SU(2)</math></b>     | <b>35</b> |
| 4.1      | The horizontal and vertical Dirac operators                | 35        |
| 4.2      | The origin of the Dirac operators                          | 36        |
| 4.3      | Bounded twisted commutators                                | 39        |
| 4.4      | Comparison with the classical Dirac operator               | 43        |
| 4.5      | The real structure                                         | 45        |
| 4.6      | The equivariance condition                                 | 49        |
| 4.7      | Conjugating the Dirac element with the fundamental unitary | 55        |
| <b>5</b> | <b>Quantum metrics on quantum <math>SU(2)</math></b>       | <b>61</b> |
| 5.1      | The Podleś sphere revisited                                | 61        |
| 5.2      | Spectral projections and twisted derivations               | 65        |
| 5.3      | Spectral bands as compact quantum metric spaces            | 68        |
| 5.4      | Schur multipliers                                          | 72        |
| 5.5      | Projecting onto the spectral bands                         | 76        |
| 5.6      | Quantum $SU(2)$ as a compact quantum metric space          | 78        |
| <b>6</b> | <b>The quantum Berezin transform</b>                       | <b>81</b> |
| 6.1      | Definition of the Berezin transform                        | 81        |
| 6.2      | The image of the Berezin transform                         | 84        |
| 6.3      | Estimates on the Berezin transform                         | 91        |
