Preface of the Authors *xvii*

0 Introduction: Adhering to the 12 Principles of Green Chemistry: How Does Homogeneous Catalysis Contribute? *1*

Part I Chemical Basics *13*

1 Definition, Variants and Examples: What Actually Is Catalysis? *15*

1.1 Definition of Catalysis *15*

1.2 The Different Varieties of Catalysis *18*

1.3 The Directing Effect of the Catalyst *20*

1.4 Sources of Information About Catalysis *21*

2 A Brief History: Homogeneous Transition Metal Catalysis: A Young Science *25*

2.1 Phase I: Inorganic Basic Chemicals (1898–1918) *26*

2.2 Phase II: Refinery Processes: Syngas and Ethyne Chemistry (1919–1945) *27*

2.3 Phase III: Petrochemical Industrial Products (1946–1970) *27*

2.4 Phase IV: Fine Chemicals and Speciality Products (1971 to Date) *29*

3 Industrial Homogeneous Catalysis: What Is the Economic Importance? *33*

3.1 Application Areas of Catalysis *33*

3.2 Important Homogeneous Catalysed Processes *33*

3.3 Synthesis of Fine and Speciality Chemicals by Homogeneous Catalysis *34*

3.4 Atom Economy and Environmental Factor *35*

4 Definition of Important Terms: X, Y, S, STY, TON, TOF and more... *41*

4.1 Conversion *42*

4.2 Yield *43*

4.3 Selectivity *44*

4.3.1 Chemoselectivity *44*

4.3.2 Regioselectivity *44*

4.3.3 Diastereoselectivity *45*

4.3.4 Enantioselectivity *45*

4.4 Turnover Frequency *45*

4.5 Turnover Number *46*

4.6 Catalyst Lifetime *47*

4.7 Space–Time–Yield *47*

4.8 Catalyst Losses *48*

4.9 Catalyst Stability/Deactivation and Recycling *49*

4.10	Product Purity	49
4.11	Further Important Terms	51
4.12	The Choice Is Yours!	51
5	Basics of Organometallic Chemistry: Bonds, Elementary Steps and Mechanisms	55
5.1	Metal–Ligand Bonds	55
5.2	Change of Oxidation State (OS)	58
5.3	Change of Coordination Number (CN) and Coordination Geometry	58
5.4	The Elementary Steps	59
5.4.1	Association/Dissociation	59
5.4.2	Oxidative Addition/Reductive Elimination	60
5.4.3	Insertion/Extrusion	61
5.4.4	Oxidative Coupling (Cycloaddition)/Reductive Cleavage (Retrocycloaddition)	62
5.4.5	Further Elementary Steps	62
5.4.6	A Review on the Elementary Steps	63
5.5	Catalytic Cycles	63
6	Transition Metal Compounds: The ‘Captains’ of Homogeneous Catalysis	67
6.1	Group 3 and Lanthanides	67
6.2	Metals of Group 4	67
6.3	Metals of Groups 5–7	67
6.4	The ‘Iron Metals’ of Groups 8–10	68
6.5	The Noble Metals from Groups 8 to 10	70
6.5.1	Ruthenium	70
6.5.2	Osmium	71
6.5.3	Rhodium	71
6.5.4	Iridium	72
6.5.5	Palladium	72
6.5.6	Platinum	73
6.6	Gold: A Noble Metal of Group 11	74
6.7	The Costs of Catalyst Metals	74
6.8	The Availability of Transition Metal Compounds	76
7	Ligands: The ‘Helmsmen’ of Homogeneous Catalysis	79
7.1	Steric Effects and Tolman’s Ligand Cone Angle	80
7.2	Ligand’s Electronic Effects	86
7.3	Chelating Ligands and Ligand Bite Angle	90
7.4	Hemilabile Ligands	95
7.5	Nitrogen-Based Ligands	95
7.6	Pincer Ligands	96
7.7	Ligand Syntheses	97
7.7.1	Phosphorus Ligands	98
7.7.2	N-Heterocyclic Carbene Ligands	101
7.8	Ligand Stability and Decomposition	102
7.8.1	Decomposition of Phosphines	103
7.8.2	Decomposition of Phosphites	104
7.9	Costs and Accessibility of Ligands	104
8	Solvents in Homogeneous Catalysis: The Reaction Medium	107
8.1	General Aspects of Solvents	107
8.2	Physical Properties of Solvents – Solvent Parameters	108
8.2.1	Dielectric Constant (Permittivity)	108

8.2.2	Dipole Moment	109
8.2.3	E_T -Value	109
8.2.4	Solubility Parameter δ and Hansen Parameter	110
8.2.5	Green Chemistry Criteria	115
8.3	Influence of Solvents on Homogeneous Catalysts	115
8.3.1	Solvent Effects on Solubility	116
8.3.2	Solvent Effects on Mass Transfer	116
8.3.3	Solvents Activating Substrates, Stabilising Intermediates or Capturing Products	116
8.3.4	Solvent Effects on the Catalyst	117
8.3.5	Solvents Stabilising Transition States	118
8.4	Solvent Availability and Costs	118
8.5	Solvent Purity	119
8.6	Solvent Selection Guides	120
8.7	Advanced Reaction Media for Homogeneous Catalysis	121
8.7.1	Ionic liquids	122
8.7.2	Deep Eutectic Solvents	124
8.7.3	Supercritical Fluids	126
8.7.4	Gas Expanded Liquids (GXLs)	128
8.7.5	Fluorous Solvents	129
8.7.6	Polyethers	130
9	Enantioselective Catalysis: The “Special Case”	133
9.1	A Glossary of Asymmetric Catalysis	133
9.2	A Quick Look Back	136
9.3	The Mechanism of Asymmetric Catalytic Hydrogenation	139
9.4	Chiral Ligands	142
9.5	Overview of Homogeneously Catalysed Asymmetric Syntheses	143
9.6	Industrial Applications	143
10	Thermodynamics of Homogeneous Catalysis: When Does a Chemical Reaction Run?	147
10.1	Gibbs Energy and Energy Plot	147
10.2	Calculation or Assessment of the Free Reaction Enthalpy	149
10.3	Thermodynamic Analysis of Complex Reaction Systems	149
10.4	Advances in Computational Tools for Thermodynamics in Homogeneous Catalysis	151
10.4.1	Hybrid Functionals: Combining DFT and HF for Homogeneous Catalysis	151
10.4.2	Calculation of Gibbs Energy Using Sampling Methods	152
10.4.3	Machine Learning Methods	155
11	Kinetics of Homogeneous Catalysis: How Does the Reaction Proceed?	159
11.1	Frequently Occurring Kinetics	159
11.2	The Use of Energy Profiles to Explain Selectivity	163
11.3	Execution of Experiments to Determine the Kinetics of a Reaction	164
11.4	A Concrete Example: Hydroformylation of Cyclooctene	165
11.5	Pitfalls in Kinetic Measurements	166
12	Overview of Spectroscopic Methods: Can We See into Homogeneous Catalysis?	169
12.1	UV/Visible Spectroscopy	170
12.2	IR Spectroscopy	171
12.3	Raman Spectroscopy	173
12.4	NMR Spectroscopy	174
12.4.1	^1H NMR Spectroscopy	176
12.4.2	^{31}P NMR Spectroscopy	177

- 12.4.3 Metal NMR Spectroscopy 179
- 12.4.4 Pulsed Gradient Spin Echo NMR 181
- 12.5 Electrospray Ionisation Mass Spectroscopy (ESI-MS) 182
- 12.6 X-Ray Absorption Spectroscopy (XAS) and Extended X-ray absorption fine Structure Analysis (EXAFS) 184
- 12.7 Electron Paramagnetic Resonance Spectroscopy (EPR) 185
- 12.8 Inductively Coupled Plasma Optical Emission Spectroscopy (ICP-OES) 188
- 12.9 *In situ*, Operando and Combined Spectroscopy 189

Part II Process Engineering Fundamentals 193

- 13 Reactor Types: Where Homogeneous Catalysis Actually Occurs 195**
 - 13.1 Stirred Tank Reactor 195
 - 13.1.1 General description 195
 - 13.1.2 Different Operation Modes 198
 - 13.1.3 Stirred-Tank Pressure Reactors (Laboratory Autoclaves) 199
 - 13.2 Tubular Reactor 201
 - 13.3 Transition variants between stirred tank reactor and plug flow reactor 202
 - 13.3.1 Stirred-Tank Reactor Cascade (CAS) 202
 - 13.3.2 Taylor–Couette Reactor (TCR) 202
 - 13.4 Reactors for Gas/Liquid Reactions 203
 - 13.4.1 Sparged Stirred-Tank Reactor 204
 - 13.4.2 Bubble Column Reactor 204
 - 13.5 Loop Reactors 205
 - 13.6 Jet-Loop Reactor 205
 - 13.7 Membrane Reactor 206
 - 13.8 Microreactors 207
 - 13.9 Special Reactors 208
 - 13.10 The ‘Agony of Choice’ 208
- 14 Overview of Catalyst Separation Techniques: How Catalyst and Product Go Their Separate Ways After the Reaction 213**
 - 14.1 Separation Principles 213
 - 14.2 Separation by Distillation 215
 - 14.2.1 Example 1: Ethene Oxidation to Acetaldehyde 215
 - 14.2.2 Example 2: Methanol Carbonylation to Acetic Acid 217
 - 14.2.3 Example 3: Alkene Hydroformylation to Aldehydes 218
 - 14.3 Separation by Precipitation 219
 - 14.3.1 Chemical Precipitation 219
 - 14.3.2 Addition of a Solvent 219
 - 14.3.3 Removal of the Solvent 220
 - 14.3.4 Addition of Specific Precipitants 220
 - 14.3.5 Thermal Deposition of a Metal Catalyst 220
 - 14.3.6 Solubility-Switching Tags 220
 - 14.4 Separation by Crystallisation 221
 - 14.5 Separation by Adsorption 222
 - 14.6 Separation by Heterogenisation on a Solid Support 223
 - 14.7 Separation by Membranes 223
 - 14.8 Separation by Extraction 223
 - 14.9 Separation of a Second Liquid Phase 225

15	Catalyst Separation by Membranes: A Barrier Between Products and Catalysts	229
15.1	Membranes	232
15.2	Key Figures	234
15.3	Technical Implementation	236
15.4	Industrial Applications	237
16	Immobilisation on Solid Supports: From Homogeneity to Heterogeneity	241
16.1	The Basic Principles	241
16.2	Solid-Phase Immobilisation	242
16.2.1	Organic Supports	242
16.2.2	Inorganic Carrier Materials	244
16.3	Supported-Liquid Phase (SLP) Immobilisation	246
16.4	Industrial Application	247
17	Liquid–Liquid Multiphase Systems: The Smart Approach to Catalyst Separation	249
17.1	Alteration of the Solubility of the Ligands by Selective Modifications	249
17.2	Variants of Multiphase Catalysis	251
17.2.1	Multiphase Catalysis with Self-Separating Product(s)	252
17.2.2	Multiphase Catalysis with Intensified Mixing	254
17.2.3	Multiphase Catalysis with Co-Solvents	254
17.2.4	Multiphase Catalysis Assisted by Additives	255
17.2.5	Switchable Multiphase Catalysis	259
18	Switchable Multiphase Systems: Triggering Separation of Homogeneous Mixtures	261
18.1	Temperature as a Switch	262
18.1.1	Thermoregulated Phase-Transfer Catalysis	262
18.1.2	Thermoregulated Microemulsions	263
18.1.3	Thermoregulated Fluorous Solvent Systems	264
18.1.4	Thermoregulated Polymer-Bound Catalysts	265
18.1.5	Thermomorphic Multiphase Systems	267
18.2	CO ₂ Switchable Systems	270
18.2.1	Catalyst Recycling via Switchable Water (SW)	271
18.2.2	Catalyst Recycling via Switchable Hydrophilicity Solvents	273
18.2.3	Switchable Ligands and Transition Metal-/Organocatalysts	274
18.3	Concluding Remarks to Recycling Methods	275
19	Optimisation Strategies: Combinatorial Synthesis, Design of Experiments and High-Throughput Screening	279
19.1	Combinatorial Chemistry	280
19.2	Design of Experiments (DoE)	283
19.3	High-Throughput Screening (HTS)	286
19.3.1	Parallel Reactor Systems	287
19.3.2	Sequential Reactor Systems	292
19.4	Virtual Screening (Computational Screening, Machine Learning)	299
19.4.1	Molecular Descriptors	299
19.4.2	Quantitative Structure Activity Relationship (QSAR) Modelling	301
19.4.3	Virtual Libraries	301
20	Process Development in Miniplants: From Laboratory to Production	305
20.1	Combination of TMSs with Other Reactor Types	307
20.2	Improved Online Analytics	308

20.3	Application of TMSs for Complex Reactions in Continuous Operation	310
20.4	Combined Reaction Separation Processes	311

Part III Homogeneously Catalysed Reaction Types 315

21	An Overview of C—C-Bond Formation: A Guide Through the Jungle	319
22	Hydroformylation: The Industrial Route to Aldehydes and Alcohols	325
22.1	Main and Side Reactions	326
22.2	Catalysts	327
22.2.1	Metals in Hydroformylation	327
22.2.2	Ligands in Hydroformylation (see Chapter 7)	328
22.2.3	Solvents for Hydroformylation	328
22.2.4	Process Variants for Industrial Hydroformylation	329
22.3	Mechanisms	331
22.4	Substrates	334
22.5	Asymmetric Hydroformylation	337
22.6	Syngas Surrogates	338
23	Carbonylation: The Versatile Insertions of Carbon Monoxide	341
23.1	Reactions Between CO and Hydrogen	341
23.2	Reactions of CO with Alkenes and Vinyl Arenes	343
23.3	Reactions of CO with Dienes	345
23.4	Reactions of CO with Alkynes	346
23.5	Reactions of CO with Alcohols	347
23.5.1	Carbonylation of Methanol	347
23.5.2	Homologation of Alcohols	348
23.6	New Trends	348
24	Oligomerisation and Cyclooligomerisation: The Conversion of Unsaturated Aliphatics into Short Chains or Medium-Sized Rings	351
24.1	Oligomerisation of Alkenes	351
24.1.1	Ethene	351
24.1.2	Propene	357
24.1.3	Other Monoenes	359
24.2	Dienes	359
24.3	Alkynes	361
24.4	Co-Oligomerisations	361
24.4.1	Ethene and Butadiene	361
24.4.2	Ethene and Styrene	362
24.4.3	Co-Oligomerisations with Alkynes	363
25	Metathesis: A ‘Change-Your-Partners’ Dance	365
25.1	The Many Variants of Alkene Metathesis	365
25.2	Mechanism and Catalysts	367
25.3	Industrial Applications	371
25.4	Other Types of Metatheses	373
25.4.1	Alkyne Metathesis	373
25.4.2	Enyne Metathesis	374
25.4.3	Carbonylalkene Metathesis	374

25.4.4	Alkane Metathesis (see Chapter 40)	374
25.5	Some Trends	375
26	Polymerisation: The Purposeful Assembly of Macromolecules	381
26.1	Polyethylene and Ziegler Catalysts	381
26.2	Polypropylene and Metallocene Catalysis	385
26.3	Further Polyalkenes and Copolymers	388
26.4	Polydienes	390
26.5	Polyketones	392
26.6	Polyalkynes	393
26.7	Post-Metallocenes	394
26.8	Some Trends	395
27	Telomerisation: The Construction of Functionalised Aliphatic Chains	397
27.1	Reactions, Mechanisms and Catalysts	397
27.2	Butadiene Telomerisation	399
27.2.1	Butadiene and Oxygen Nucleophiles	399
27.2.2	Butadiene and Nitrogen Nucleophiles	405
27.2.3	Butadiene and Carbon Nucleophiles	405
27.2.4	Carboxytelomerisation	406
27.2.5	Cyclic Telomers with 1,3-Butadiene	406
27.3	Telomerisations with C ₅ - and C ₆ -Dienes	407
27.4	Terpenoic 1,3-Dienes	408
27.5	Enantioselective Telomerisations	408
27.6	Some Trends	409
28	Carbon–Carbon Coupling Reactions: Quite a lot of Name Reactions	413
28.1	Mizoroki–Heck Reactions	414
28.2	Sonogashira–Hagihara Reactions	417
28.3	Suzuki–Miyaura Reaction	419
28.4	Stille Coupling	422
28.5	Hiyama Coupling	423
28.6	Negishi Coupling	425
28.7	Kumada Coupling	426
29	Hydrogenation: C–H Bond Formation	429
29.1	Catalysts and Mechanisms	430
29.2	Asymmetric Hydrogenation	430
29.3	Hydrogenation of Various Functional Groups	432
29.3.1	C–C Multiple Bonds	432
29.3.2	C=O Double Bonds	434
29.3.3	C=N Double Bonds	435
29.3.4	Nitriles	436
29.4	Transfer Hydrogenations	436
29.5	Industrial Applications	437
29.5.1	(S)-Metolachlor	438
29.5.2	L-DOPA	438
29.5.3	Aspartame	439
29.5.4	Naproxen	439
29.5.5	Indinavir	439
29.5.6	Carbapenem	439

29.5.7	Biotin	440
29.5.8	Production of Cyclohexane	440
29.6	Some Trends	440
30	Oxidation: C—O Bond Formation	443
30.1	Wacker Oxidation	443
30.2	Epoxidation	447
30.3	Asymmetric Dihydroxylation	451
30.4	Oxidative Cleavage of C=C Double Bonds	452
30.5	Oxidation of Cyclohexane	453
30.6	Oxidation of Alkyl Aromatics	454
30.7	Oxidation of Alcohols	456
30.8	Oxidation of Ketones (Baeyer–Villiger Oxidation)	457
31	Amination and Hydroamination: C—N Bond Formation	461
31.1	Amination of Aryl Halides	461
31.2	Hydroamination of Alkenes	464
31.3	Hydroaminations of 1,3-Dienes and Allenes	468
31.4	Hydroamination of Alkynes	470
31.5	Amination of Functional Groups	471
31.5.1	Alcohol Amination	471
31.5.2	Reductive Amination	472
31.6	Aminohydroxylation	474
32	Hydrofunctionalisation: Formation of Further C—X Bonds	477
32.1	Hydrosilylation	477
32.1.1	Hydrosilylation of Alkenes	478
32.1.2	Hydrosilylation of Dienes and Alkynes	479
32.1.3	Hydrosilylation of Ketones and Aldehydes	479
32.2	Hydroboration	480
32.3	Hydration and Hydroalkoxylation	483
32.4	Hydrometalation	484
32.4.1	Hydrozirconation	484
32.4.2	Further Hydrometalations	486
33	Isomerisation and Rearrangement: Migration of Double Bonds and Rearrangement of the Carbon Backbone	489
33.1	Isomerisation of Alkenes	489
33.1.1	The Alkyl Mechanism	490
33.1.2	The Allylic Mechanism	490
33.1.3	The Hydrogen Atom Transfer Mechanism	491
33.1.4	Important Applications of Alkene Isomerisation	491
33.2	Isomerisation of Alkenes with Functional Groups	492
33.2.1	Allylic Amines	493
33.2.2	Allylic Alcohols	495
33.2.3	Isomerisation of Oleochemicals	496
33.3	Isomerisation of 1,3-Dienes, Allenes and Alkynes	496
33.4	Cyclic Compounds: Formation, Rearrangement and Splitting	497

Part IV	Associated Catalysis	501
34	Tandem Reactions: Multiple Synthesis Steps in One Pot	503
34.1	General Taxonomy	503
34.1.1	One-Pot Reactions	505
34.1.2	Domino Reactions	505
34.1.3	Cascade or Zip Reactions	505
34.1.4	Tandem Reactions	505
34.1.5	Orthogonal Tandem Catalysis	506
34.1.6	Auto-tandem Reactions	506
34.1.7	Assisted Tandem Catalysis	507
34.2	Important Examples of Homogeneously Catalysed Tandem Reactions	508
34.2.1	Hydroformylation (see Chapter 22)	508
34.2.2	Carbonylation (see Chapter 23)	509
34.2.3	Oligomerisation (see Chapter 24)	509
34.2.4	Metathesis (see Chapter 25)	509
34.2.5	Polymerisation (see Chapter 26)	511
34.2.6	Telomerisation (see Chapter 27)	511
34.2.7	Coupling Reactions (see Chapter 28)	512
34.2.8	Hydrogenations (see Chapter 29)	512
34.2.9	Oxidations (see Chapter 30)	513
34.2.10	Amination (see Chapter 31)	513
34.2.11	Hydrofunctionalisation (see Chapter 32)	514
34.2.12	Isomerisation (see Chapter 33)	514
35	Nanocatalysis: A Balancing Act Between Homogeneous and Heterogeneous Catalysis	519
35.1	Introduction	519
35.2	Synthesis and Properties of Nanocatalysts	521
35.3	Stabilisation of Nanoparticles	522
35.4	Heterogenisation of Nanoparticles on Solid Supports	525
35.5	Catalysis Involving Metal Nanoparticles	525
35.6	What Can Happen During a Reaction?	526
35.7	Homogeneous Catalysis or Nanocatalysis?	527
36	Electrocatalysis: Catalysis with Electrons	531
36.1	Water Splitting	533
36.2	Carbon Dioxide Reduction	534
36.3	Electrochemical <i>In Situ</i> Synthesis of Homogeneous Catalysts	535
36.4	Electrocatalytic Oxidations	535
37	Photocatalysis: Catalysis with Photons	537
38	Alternative Ways of Energy Input: Sono-, Microwave- and Mechanocatalysis	543
38.1	Sonocatalysis	543
38.2	Microwave Catalysis	546
38.3	Mechanocatalysis	551
38.3.1	CC-Linkage Reactions	553

- 38.3.2 Redox Reactions 554
- 38.3.3 Degradation of Renewables 555
- 38.3.4 Degradable Synthetic Polymers 555

39 Organocatalysis: Homogeneous Catalysis only with Organic Compounds 559

Part V New Resources 565

40 Alkane Activation: Acquisition of New Feedstocks 567

- 40.1 Mechanistic Considerations 568
- 40.2 C–O Formation via Alkane Oxidation 570
- 40.3 C–C-Linking Reactions 572
 - 40.3.1 Alkane Carbonylation 572
 - 40.3.2 Carbene Insertion 573
- 40.4 Hydrogen Migrations and C–C-Splitting Reactions 574
 - 40.4.1 C–C-Splitting via Hydrogenolysis 574
 - 40.4.2 Alkane Dehydrogenation to Alkenes 574
 - 40.4.3 Alkane Metathesis 575
- 40.5 Further Alkane Functionalisations (C–X-Linkage Reactions) 576
 - 40.5.1 C–N Linkages (Amidations of Alkanes) 576
 - 40.5.2 C–B Linkages (Alkane Borylations) 576
 - 40.5.3 C–S-Linkages (Alkane Sulfonations) 576
 - 40.5.4 C–X Linkages (Alkane Halogenations) 576

41 Reactions with Carbon Dioxide: Activating an ‘Inactive’ Molecule 579

- 41.1 Carbon Dioxide and Alkanes 580
- 41.2 Carbon Dioxide and Alkenes 581
 - 41.2.1 Saturated Carboxylic Acids and Esters 581
 - 41.2.2 Unsaturated Carboxylic Acids 582
 - 41.2.3 Oxidative Carboxylation to Cyclic Carbonates 583
 - 41.2.4 Hydroformylation to Aldehydes and Alcohols 583
 - 41.2.5 Hydroaminomethylation to Amines 584
- 41.3 Carbon Dioxide and Dienes 584
- 41.4 Carbon Dioxide and Alkynes 588
- 41.5 Carbon Dioxide and Aromatic Compounds 590
- 41.6 Carbon Dioxide and Hydrogen (Reductions of CO₂) 592
 - 41.6.1 Carbon Monoxide Formation 592
 - 41.6.2 Formic Acid and Derivatives 592
 - 41.6.3 Formaldehyde 596
 - 41.6.4 Dimethoxymethane 596
 - 41.6.5 Methanol 596
 - 41.6.6 Methylamines 598
 - 41.6.7 Methane 598
- 41.7 Carbon Dioxide and Epoxides 598
- 41.8 Carbon Dioxide and Amines 600
- 41.9 Carbon Dioxide-Containing Polymers 600
 - 41.9.1 Aliphatic Polycarbonates Containing CO₂ and Epoxides 600
 - 41.9.2 Polypyrones from CO₂ and Diynes 601
 - 41.9.3 CO₂-Containing Polyesters 602
 - 41.9.4 Aromatic Polycarbonates Based on CO₂ 603

42	Nitrogen Activation: Reaching for the Air	605
42.1	Transition Metal–Nitrogen Complexes	607
42.2	Stoichiometric Reactions of the Nitrogen Molecule	609
42.3	Homogeneously Catalysed Synthesis of Ammonia	609
42.3.1	Mononuclear Molybdenum Catalysts	609
42.3.2	Dinuclear Molybdenum Catalysts	610
42.3.3	Iron and Other Late Transition Metal Catalysts	611
42.4	What else...	612
43	Recycling of Polymers: The Use of Waste	617
43.1	Thermal Cracking	618
43.2	Solvolysis	619
43.2.1	Solvolysis of Polyesters	619
43.2.2	Solvolysis of Polycarbonates	621
43.2.3	Solvolysis of Polyacetals	621
43.2.4	Solvolysis of Polyamides	621
43.2.5	Solvolysis of Polyurethanes	622
43.3	Hydrogenolyses	623
43.3.1	Hydrogenolysis of Hydrocarbons	623
43.3.2	Hydrogenolysis of Polyesters	623
43.3.3	Hydrogenolysis of Polycarbonates	624
43.3.4	Hydrogenolysis of Polyamides	624
43.3.5	Hydrogenolysis of Polyurethanes	625
44	Homogeneous Catalysis with Renewables: Using Nature's Treasures	629
44.1	Catalytic Conversion of Oleochemicals	631
44.1.1	Methyl Oleate	632
44.1.2	Methyl Linoleate	634
44.1.3	Glycerol	636
44.2	Catalytic Reactions of Terpenes	637
44.2.1	β -Myrcene	637
44.2.2	Cyclic Monoterpenes	637
44.3	Catalytic Reactions of Carbohydrates	638
44.3.1	Monosaccharides	639
44.3.2	Disaccharides	639
44.3.3	Polysaccharides	639
44.4	Catalytic Reactions of Lignin	640
45	Future Challenges of Homogeneous Catalysis: What the Crystal Ball Might Tell You	645
45.1	New Resources	645
45.1.1	Alkanes	645
45.1.2	Carbon Dioxide	646
45.1.3	Aromatics	647
45.1.4	Renewable Resources	649
45.1.5	Waste Substances	653
45.1.6	Raw Materials with Elements Other Than Carbon	654
45.2	New Reactions	655
45.2.1	Selective Oxidations	655
45.2.2	Enantioselective Reactions	656
45.2.3	Tandem Reactions	656
45.2.4	Polymerisations	657

45.2.5	New Catalytic Reactions	657
45.2.6	Environment-Friendly Reactions	657
45.3	New Smart Products	657
45.4	New Catalysts	658
45.5	New Methods	659
	Epilogue	661
	Answers to the Exercise Questions	663
