FOREWORD	V
PREFACE	VI
GREETING	VII
1. INTRODUCTION	1
2. FUNDAMENTALS	5
2.1 Inductive power transmission	6
2.2 Induction furnace structural shapes	9
2.3 Induction crucible furnaces	10
2.3.1 Electrical efficiency	10
2.3.2 Field line	11
2.3.3 Bath agitation	12
2.3.3.1 Bath superelevation	12
2.3.3.2 Bath flow	14
2.4 Induction channel furnace	16
2.4.1 Efficiency factor	16
2.4.2 Electromagnetic field and melt flow	16
3. COMPONENTS OF A CRUCIBLE FURNACE PLANT	21
3.1 Furnace body	23
3.1.1 Refractory lining	23
3.1.1.1 Structural ceramics	23
3.1.1.2 Refractory crucible	24
3.1.1.3 Refractory technology	29
3.1.2 Coil and magnetic yokes	32
3.1.3 Tilting frame and furnace cover	36
3.1.4 Hydraulic system including emergency tilting	38
3.2 Power supply	39
3.2.1 Mains network and medium frequency connection	39
3.2.2 Parallel and series resonant converters	41
3.2.3 Converters with IGBT modules	43
3.2.4 Circuit feedback	44
3.2.5 Optimizing power utilization by tandem arrangement	45

3.2.6	Frequency changing.....	47
3.2.7	Magnetic leakage fields.....	48
3.3	Peripheral Systems	50
3.3.1	Re-cooling devices.....	50
3.3.1.1	Furnace cooling circuit.....	50
3.3.1.2	Cooling circuit for the electrical system	54
3.3.1.3	Common cooling circuit for the electrical system and the furnace	54
3.3.1.4	Frost protection and adjusting the water quality.....	55
3.3.1.5	Use of waste heat.....	57
3.3.2	Charging devices.....	58
3.3.3	Extraction hood	61
3.3.4	Skimming devices	63
3.3.5	Process control system	65
3.4	Overall layout.....	67
4.	COMPONENTS OF INDUCTION CHANNEL FURNACES	71
4.1	Furnace vessel.....	72
4.1.1	Structural shapes for holding	72
4.1.2	Structural shapes for dosed pouring.....	75
4.1.3	Structural shapes for melting	78
4.1.4	Refractory lining	80
4.2	Inductors	81
4.2.1	Structural shapes	82
4.2.2	Refractory lining	85
4.3	Power supply	86
4.3.1	Line frequency power supply	87
4.3.2	Converter power supply.....	88
4.4	Cooling devices	88
5.	ELECTROMAGNETIC STIRRERS AND PUMPS.....	91
6.	FURNACE DESIGN AND ENERGY REQUIREMENTS.....	95
6.1	Characteristic data for melting metal in crucible furnaces.....	96
6.1.1	Furnace power consumption	96
6.1.1.1	Specific enthalpy.....	96
6.1.1.2	Electrical losses.....	99

6.1.1.3	Thermal losses	100
6.1.1.4	Furnace efficiency	102
6.1.1.5	Design of furnace power	103
6.1.2	Specific power and furnace limit-rating	103
6.1.3	Frequency of the coil current	105
6.1.4	Energy requirement	106
6.1.5	Electricity prices and load management	110
6.2	Characteristic data for channel furnaces	111
6.2.1	Melting non-ferrous metals	111
6.2.2	Holding and superheating iron melts	112
7.	MELTING METALLURGY OF IRON AND NON-FERROUS MATERIALS	115
7.1	Cast iron	116
7.1.1	Iron-carbon diagram.....	116
7.1.2	Cast iron types	119
7.1.3	Oxygen content of the melt and C/Si isotherms	123
7.1.4	Inoculation and nucleation	128
7.1.5	Magnesium treatment	131
7.1.5.1	Pour-over and sandwich process.....	133
7.1.5.2	Tundish cover process	133
7.1.5.3	Converter process (Georg Fischer System)	134
7.1.5.4	Wire flushing process	135
7.1.5.5	In-mold process	136
7.1.5.6	Other processes of Mg treatment	136
7.1.6	Desulfurization.....	137
7.1.7	Monitoring the melt	138
7.1.7.1	Wedge test piece.....	138
7.1.7.2	Thermal analysis.....	139
7.2	Cast steel	140
7.3	Aluminium	142
7.3.1	Primary and secondary aluminium.....	143
7.3.2	Cast and wrought alloys.....	144
7.3.3	Quality of the aluminium melt.....	145
7.3.4	Treatment of the melt	150
7.4	Copper materials	151
7.4.1	Copper production	151
7.4.2	Copper types and alloys	151
7.4.3	Oxidizing and reductive melting	153

8. OPERATION OF INDUCTION SYSTEMS IN IRON FOUNDRIES	157
8.1 Melting in induction crucible furnaces	159
8.1.1 Process engineering features.....	159
8.1.2 Induction furnace versus cupola furnace.....	160
8.1.3 Emissions during inductive melting.....	162
8.1.4 Line frequency (LF) or medium frequency (MF) crucible furnaces.....	163
8.1.5 Input materials.....	165
8.1.5.1 Steel scrap	165
8.1.5.2 Pig iron	167
8.1.5.3 Return material.....	167
8.1.5.4 Cast iron scrap	167
8.1.5.5 Chips	167
8.1.5.6 Additives.....	168
8.1.6 Producing the melt.....	168
8.1.6.1 Making up the charge and charging.....	168
8.1.6.2 Adjusting the target composition of the melt	171
8.1.6.3 Heating to tapping temperature	173
8.1.6.4 Processor-controlled melting run	173
8.1.6.5 Performance-optimized charging.....	176
8.1.6.6 Deposit and bridge formation	178
8.1.7 Extraction of fumes	179
8.1.8 Melting zinc-coated scrap.....	181
8.1.9 Melting chips.....	184
8.1.9.1 Charging loose chips.....	184
8.1.9.2 Melting chip briquettes.....	186
8.1.10 Melting sponge iron.....	186
8.1.10.1 Production.....	186
8.1.10.2 Characteristic properties.....	188
8.1.10.3 Melting process.....	188
8.1.10.4 Profitability.....	190
8.1.11 Downtime procedure.....	191
8.1.12 Refractory behavior.....	192
8.1.12.1 Chemical abrasion.....	192
8.1.12.2 Infiltration via the liquid or vapor phase	193
8.1.13 Crucible monitoring.....	195
8.1.13.1 Integral measurement of wear.....	195
8.1.13.2 Earth fault monitoring	197
8.1.13.3 Further-going monitoring systems	200

8.2 Duplicating, holding and storing melts in a crucible furnace.....	201
8.3 Holding in the channel furnace.....	204
8.3.1 Integrating into the production cycle	204
8.3.2 Characteristic features of the channel furnace	205
8.3.3 Method of furnace operation.....	207
8.3.3.1 Commissioning.....	207
8.3.3.2 Operational procedures.....	208
8.3.3.3 Automatic process monitoring	209
8.3.3.4 Inductor change	210
8.3.3.5 Dealing with disturbances	211
8.3.4 Inductor monitoring	211
8.3.5 Wear behavior of the refractory lining	215
8.3.5.1 Erosion	216
8.3.5.2 Infiltration.....	216
8.3.5.3 Crack formation.....	217
8.3.5.4 Deposit formation.....	217
8.3.6 Energy consumption and profitability.....	219
8.4 Pouring with pressure-actuated pouring systems.....	219
8.4.1 Pressure-actuated systems.....	220
8.4.2 Tundish pouring devices	222
8.4.3 Use of heated and unheated pouring devices	223
8.4.4 Pouring Mg treated melts.....	224
8.4.4.1 Deposit formation caused by suspended oxides.....	225
8.4.4.2 Magnesium vaporization	226
8.4.4.3 Magnesium reactions with metal oxides and sulfur.....	226
8.4.4.4 Practical experience.....	227
8.4.5 Alternate pouring of GCI and NCI	231
8.4.6 Pouring with intermediate ladles	231
8.4.7 Stopper for automatic pouring.....	232
8.4.8 Pouring in closed control circuit.....	233
8.4.9 Integrated inoculation.....	234
8.4.10 Low-pressure pouring	236
8.4.11 Process monitoring	237
8.5 Continuous supply of molten iron.....	237
8.5.1 Melting cycle in a tandem plant	238
8.5.2 Plant concepts for a continuous supply of molten iron	239
8.5.2.1 Channel furnace as buffer	239

8.5.2.2	Tandem plant as melting and buffer unit.....	240
8.5.2.3	Pouring furnace as buffer.....	242
8.5.3	Optimized design of the melting and pouring plant	243
8.6	Melting cast steel in induction crucible furnaces	244
8.6.1	Frequency and gas absorption	245
8.6.2	Adjusting the target composition	247
9.	INDUCTION FURNACES IN STEEL WORKS	249
9.1	Induction furnace versus electric arc furnace.....	252
9.2	Design of an induction melting system.....	253
9.3	Production of different types of steel	255
9.4	Combination of electric arc furnace and induction furnace	258
9.5	Melting ferroalloys.....	261
9.6	Using sponge iron to produce steel	262
10.	INDUCTION SYSTEMS IN THE ALUMINIUM INDUSTRY	269
10.1	Deploying crucible furnaces in foundries	270
10.1.1	Metallurgical-process engineering benefits	271
10.1.2	Duplicating in crucible furnaces.....	272
10.1.3	Refractory behavior.....	272
10.2	Melting aluminium chips	274
10.3	Melting in works for semi-finished products.....	276
10.3.1	Examples of established production plants.....	277
10.3.2	Behavior of the inductor refractory lining.....	279
11.	INDUCTION SYSTEMS FOR COPPER MATERIALS	283
11.1	Induction furnaces in copper foundries	284
11.1.1	Melting.....	284
11.1.2	Pouring copper materials with pressure-actuated pouring furnaces.....	285
11.2	Inductive melting in works for semi-finished products	286
11.2.1	Channel furnace with high-performance inductors	286

Contents	XV
11.2.2 Deployment of crucible furnaces	289
11.2.2.1 Melting brass chips	289
11.2.2.2 Recycling cable wastes.....	291
11.2.2.3 Flexible melting of copper alloys.....	292
12. INDUCTION FURNACES FOR MELTING ZINC.....	293
12.1 Re-melting zinc cathodes.....	294
12.2 Melting zinc alloys.....	296
12.3 Galvanized strip.....	297
LITERATURE	299
GLOSSARY	311
