Preface	v
Contents	ix
Part I Characteristic zero	1
1 On functional equations of Euler systems	3
<i>by David Burns and Takamichi Sano</i>	
1 Introduction	3
2 Coleman maps and local Tamagawa numbers	8
3 Generalized Stark elements and Tamagawa numbers	18
4 The functional equation of vertical determinantal systems	25
5 Construction of a higher rank Euler system	32
6 A generalized Coleman–Ihara formula	37
References	39
2 On the Artin formalism for triple product p-adic L-functions: Chow–Heegner points vs. Heegner points	43
<i>by Kâzım Büyükboduk, Daniele Casazza, Aprameyo Pal and Carlos de Vera-Piquero</i>	
1 Introduction	43
2 Big Heegner points and reformulation of Conjecture 1.1	51
3 First reduction step: Weight-2 specializations	63
4 Review on Gross–Kudla–Schoen cycles and big diagonal cycles ..	66
5 Chow–Heegner points and generalized Gross–Kudla conjecture ..	79
6 Compatibility of de Rham and étale pictures	81
7 Towards a proof of Conjecture 1.1	85
References	88
3 Character formula for conjugacy classes in a coset	93
<i>by Tim Dokchitser and Vladimir Dokchitser</i>	
References	100
4 Character formula for Weil representations in terms of Frobenius traces	101
<i>by Tim Dokchitser and Vladimir Dokchitser</i>	
1 Introduction	101
2 Proof of Theorem 1.1	105
3 Proof of Corollary 1.3	105
4 Proof of Theorem 1.7	105

5	Proof of Theorem 1.2	106
6	An example	108
	References	110
5	On the Galois module structure of minus class groups	113
	<i>by Cornelius Greither and Takenori Kataoka</i>	
1	Introduction	113
2	Review of the equivalence relation	117
3	Concrete applications	123
4	The realizability problem	129
5	Rephrasing the problem on $\mathcal{Z}^{\text{adm}}$	132
6	The structure of $\mathcal{Z}^{\text{adm}}$	141
	References	146
6	On class groups and Iwasawa modules of CM-fields	149
	<i>by Masato Kurihara</i>	
1	Introduction	149
2	Full ideal class group	151
3	Iwasawa modules for CM-fields	162
4	Equivariant Iwasawa main conjecture and its proof	169
5	S -ramified Iwasawa modules over totally real number fields	175
	References	181
7	On natural complexes in Iwasawa theory	185
	<i>by Antonio Mejías Gil and Andreas Nickel</i>	
1	Introduction	185
2	Construction of the main complex	187
3	The complex of Burns, Kurihara and Sano	193
	References	199
8	Explicit reciprocity laws in Iwasawa theory: A survey with some focus on the Lubin–Tate setting	201
	<i>by Otmar Venjakob</i>	
1	Introduction	201
2	Gauß’ reciprocity law and the quadratic Hilbert symbol	202
3	Higher Hilbert symbols and variants	207
4	Explicit formulas	210
5	Bloch–Kato’s reciprocity law	216
6	Perrin-Riou’s reciprocity law	220
7	Regulator maps and Euler systems	231

8	ε -isomorphisms	244
	References	245
Part II	Positive characteristic	253
9	On the formal Carlitz module	255
	<i>by Bruno Anglès</i>	
1	Introduction	255
2	Notation	257
3	Carlitz–Goss ∞ -adic zeta values	257
4	Carlitz–Goss P -adic zeta values	259
5	Taelman’s class formula	261
6	The P -adic Carlitz module	272
	References	280
10	An equivariant Tamagawa number formula for abelian t-modules and applications	283
	<i>by Nathan Green and Cristian D. Popescu</i>	
1	Introduction	283
2	Nuclear operators and the trace formula	296
3	Volume formula	304
4	Main results	314
	References	320
11	Euler factors of equivariant L-functions of Drinfeld modules and beyond	323
	<i>by Cristian D. Popescu and Nandagopal Ramachandran</i>	
1	Introduction	323
2	The statement of the problem	325
3	The reduction $\overline{E}$ of E modulo v	328
4	Fitting ideals of Tate modules and consequences	331
5	The unramified case	334
6	The tamely ramified case	337
7	The t -motive and local $\mathbb{F}_q$ -shtukas associated to $\overline{E}$	341
8	Final thoughts: The more general case of pure, abelian t -modules	348
	References	351
	List of contributors	353
