

Contents

I Introduction

1	What is Physics?	3
	The Importance of Physics	5
2	Physical Quantities	9
2.1	Definition	10
2.2	The Basic Quantities	10
2.3	The Length	13
2.4	Time	16
2.5	The Mass	19
2.6	The Angle Measures	23
2.7	Notations	23
3	Measurement Errors	27
3.1	Measured Value	28
3.2	Statistical Interpretation	32
3.3	Error Propagation	33
3.4	Systematic Errors	35
4	Methodology	39
4.1	Physical Theories	40
4.2	Scientific Method	41
4.3	Scope of Classical Physics	43

II Mechanics of Point Masses

5	Kinematics of the Point Mass	47
5.1	The Point Mass	48
5.2	Reference Systems	49
5.3	Uniform Motion	56
5.4	Non-uniform Motion	59
5.5	Acceleration	61
5.6	Free fall	65
5.7	Projectile Motion	70
5.8	Circular Motion	75
6	Dynamics of a Point Mass	81
6.1	The Inertia Principle	82
6.2	The Basic Law of Mechanics	87
6.3	The Principle of Reaction	97

6.4	Superposition of Forces	101
6.5	Measurement of Forces.	104
7	Work and Energy	107
7.1	Work and Power.	108
7.2	Energy	116
7.3	Energy Conservation	119
7.4	Symmetries	131
8	Momentum	137
8.1	Conservation of Momentum.	138
8.2	Center of Mass	140
8.3	Collision Processes	146
8.4	Systems with Variable Mass.	155
8.5	The Impulse.	158
9	Friction	163
9.1	Overview	164
9.2	Static Friction	166
9.3	Kinetic Friction.	172
9.4	Rolling Friction.	174
10	Fictitious Forces	177
10.1	Overview	178
10.2	Uniformly Accelerated Reference Systems	180
10.3	Centrifugal Force.	183
10.4	Coriolis Force	189
10.5	Absolute Motion?	205
11	Celestial Mechanics	209
11.1	Kepler's First Law.	210
11.2	Kepler's Second and Third Laws.	214
11.3	Newton's Law of Universal Gravitation.	222
11.4	Gravitational and Inertial Mass	239
11.5	Potential and Potential Energy	241

III The Rigid Body

12	Statics of Rigid Bodies	253
12.1	Definition	254
12.2	The Torque	256
12.3	The Center of Gravity of a Body	261
12.4	The Theorems of Statics	264
12.5	Statics of Rigid Bodies.	268

13	Rotations	283
13.1	The Angular Momentum	284
13.2	Rotation Around a Fixed Axis	289
13.3	Conservation of Angular Momentum	300
13.4	Rolling	306
13.5	Gyroscopic Motion	313
13.6	The Inertia Tensor	327
13.7	Rotation around Free Axes	338
13.8	Comparison	340

IV Elastic Bodies

14	Elastomechanics	349
14.1	Strain	350
14.2	Bending	355
14.3	Compression	360
14.4	Shearing	362
14.5	Finite Element Method	364
15	Hydro- and Aerostatics	369
15.1	Pressure	370
15.2	Compressibility	377
15.3	Hadrostatic Pressure	381
15.4	Buoyancy	388
15.5	Interfaces	393
16	Hydro- and Aerodynamics	407
16.1	Description of Flows	408
16.2	The Continuity Equation	413
16.3	The Flow of Ideal Fluids	417
16.4	Internal Friction	432
16.5	Laminar Flows	437
16.6	Turbulent Flows	446
16.7	Drag	447
16.8	Dynamic Lift	455

V Oscillations and Waves

17	Oscillations	473
17.1	Harmonic Oscillations	474
17.2	Damped Oscillations	487
17.3	Forced Oscillations	495
17.4	Coupled Oscillations	507
17.5	Standing Waves	517

18	Waves	533
18.1	Harmonic Waves	534
18.2	Wave Equation	542
18.3	Wave Packets	544
18.4	Energy Density and Energy Transport	551
18.5	Reflection and Interference	553
19	Acoustics	559
19.1	Sound Waves	560
19.2	Perception of Sound	570
19.3	Moving Sound Sources	576
19.4	Musical Instruments	583
Supplementary Information		
A1	List of Symbols	596
A2	Solutions to the Problems	599
A3	Mathematical Introduction	621
