Introduction	XVII
Why another book on veneers?	XXI
The first visit in dentistry and the proposal of esthetic treatments	XXIV

BASIC PRINCIPLES

Chapter 1	Vertical veneers: streamlining	1
	Introduction	3
	Streamlining the process in simple cases	5
	Streamlining the process in complex cases	13
Chapter 2	The VertiCAD approach for veneer preparation	33
	Introduction	35
	Vertical finishing line for veneers: an approach inspired by nature	36
	The crowns of natural teeth have a natural overcontour	38
	The new cementoenamel junction: critical and subcritical contours	43
	The preparation dilemma	52
	The advantages of a vertical approach for veneer restorations	54
	The VertiCAD approach: description of the technique	55
Chapter 3	Esthetics	73
	Introduction	75
	Data collection	76
	Esthetics questionnaire	79
	The S.M.I.L.E. algorithm	81
	Esthetics checklist	86

XXX

Chapter 4	An app for esthetic analysis and planning	143
	Introduction	145
	The two-dimensional way: the Graphic app	146
	The three-dimensional way: the SmileFy app	153
	An artificial intelligence-based app: Smilecloud	156
	The importance of the smile frame	159
	Computer-aided smile design in nine steps	164
	Clinical execution	171
	The five key points of the digital workflow	178
Chapter 5	Manufacturing ultrathin veneers	185
	Introduction	187
	Why digital?	188
	Milling: the 'new traditional way'	188
	The five secrets of milling ultrathin veneers	189
	Three-dimensional printing: a promising alternative	192
	Description of the preparation techniques	192
Chapter 6	Luting	199
	Introduction	201
	Checking on the model	202
	Try-in and patient approval	203
	Positioning the retractor	207
	Luting sequence	207
	Finishing	212
	How make a provisional restoration ... when it is needed	214

CONFORMATIVE APPROACH

Chapter 7	Correction of malpositioning	219
	Introduction	221
	The less invasive prosthetic option	222
	Targeting the point of reference	224
	If you do not have a point of reference, strike a balance	228
	The three-dimensional positioning is a blueprint	232
	It is the details that make the difference	240
	Quick tips	244
	Conclusions	247

Chapter 8	Color correction	249
	Introduction	251
	Thickness selection	252
	Selection of materials	258
	Coloring and smile width	260
	Customizing color correction	264
	Increasing the uniformity of color	270
	Same opacity, different thickness	274
	Quick tips	278
	The deeper you prepare, the worst a substrate you have	280
	Selecting the right technique	284
	Do not underestimate the influence of dental color on facial esthetics ..	292
	Conclusions	297
Chapter 9	Diastema correction	299
	Introduction	301
	Light diastemas	302
	Facially driven treatment planning ... even for two veneers	306
	Multiple diastemas: restoring the dominance of the central incisors	310
	Lower diastema	314
	Illusory perception	318
	Close the gaps, increase the brightness	324
	The second life of a smile	328
	Conclusions	333
Chapter 10	Peg shaped teeth	335
	Introduction	336
	The real preparation-less veneers	336
	Peg-shaped teeth and orthodontics	340
	Cuspid/lateral	346
	Diffused microdontia	350
	Conclusions	357

Chapter 11	Implants and veneers	359
	Introduction	361
	The importance of timing	362
	Veneers to improve compromised implants	366
	More complex surgical correction, more time to wait	370
	Optimizing the anterior dental composition	374
	Conclusions	379
Chapter 12	Veneers and the gingival outline	381
	Introduction	383
	Recontouring the soft tissue according to the digital project	384
	Centrals, symmetry, and zenith on the distal	390
	The vertical preparation: an essential approach to manage the soft tissue	394
	The retraction technique: improving the gingival outline	398
	Conclusions	403
Chapter 13	The smile makeover in periodontally compromised patients	405
	Introduction	407
	Traditional approach versus veneers	408
	Increasing the brightness of the smile	414
	Using illusory perception (if needed)	418
	Restoring the outline of the incisal edge	422
	Fixing the concavity of the incisal plane	428
	Conclusions	433
Chapter 14	Correction of asymmetries	435
	Introduction	437
	Following the facial flow	438
	Correcting the occlusal plane	444
	Conclusions	451
Chapter 15	Veneers and orthodontics	453
	Introduction	455
	Starting from the end	456
	Multidisciplinary treatment with traditional orthodontic veneers	466
	Conclusions	473

Chapter 16	Re-treatment	475
	Introduction	477
	Removing all failed restorations	478
	Re-treating previous aggressive treatments	482
	Treating the compromised interdental area	490
	Conclusions	495

REORGANIZED APPROACH

Chapter 17	Time management and rules for full-mouth restorations	497
	Introduction	498
	Case preparation, project development, and checking	498
	Clinical session 1	502
	Laboratory work	504
	Cementation session 1 (palatal and occlusal)	506
	Cementation session 2 (buccal)	508
	Control	510
Chapter 18	The vertical dimension of occlusion: the one-step technique	513
	Introduction	515
	Changing the vertical dimension of occlusion	516
	Changing the vertical dimension of occlusion to increase the prosthetic space	518
	Changing the vertical dimension of occlusion to improve anterior relationships	524
	Changing the vertical dimension of occlusion to enhance dentolabial harmony	528
	Managing changes to the vertical dimension of occlusion	532
	Leaf gauge	536
	Mock-up	540
	Conclusions	543

Chapter 19	The double-veneer technique	545
	Introduction	547
	The best crown is not a crown	548
	The semi-traditional approach	556
	The incisal hook technique	560
	Double veneers, simultaneous technique	570
	Thickness control and luting	584
	Conclusions	595
Chapter 20	Deep bite correction	597
	Introduction	599
	Exposure of the lower incisors	600
	Digital planning first	612
	The 3 × 3 rule	626
	Conclusions	633
Chapter 21	Optimizing esthetics and function	635
	Shifting the class of occlusion	636
	Crossbite correction	648
	Severe discrepancies	656
	Conclusions	663
Chapter 22	Restoring worn dentition	665
	Introduction	667
	Developing a face-driven smile design	668
	Restoring anterior guidance	680
	Balancing the overbite–overjet and tooth display	694
	Do not underestimate ‘simple’ cases	704
	Conclusions	711
