Exterior Noise Model for BEVs	1
Leon Gavric, Gianluca di DI NENNO und Lionel Oddo	
1 Noise Regulation Context	1
2 Model of BEV Vehicles	3
3 Model Refining	8
4 Concluding Remarks	11
References	12
Application of Sound Absorbing Near Field Bodies to Reduce Tire-Road Noise	13
Klaus Pfaffelhuber, Bernard Zobec, Johan Grebert, Michael Scheinhardt und Jan Horak	
1 Introduction	13
2 Concept of Near Field Tire Road Noise Absorbers	14
3 Acoustic Treatment of the Car	15
4 Acoustic Measurements on Acoustic Test Tracks Immendingen	18
5 Summary	22
References	23
Implementing a Process for Road Noise Prediction Using Virtual Prototypes	24
Eric Sorber, Domenico Minervini und Bert Van Genechten	
1 Introduction	24
2 Test-Based Component Characterization	25
3 Road Noise Prediction using Virtual Prototypes	34
4 Conclusion	39
References	39

**Passenger Car Tyre Noise Improvement by Body Panel
Damping using Resonant Structural Metamaterials** 41
Saverio Tufano, Michael Michael, Paul Speed-Andrews, Paul
Charkaluk, Luca D’Alessandro und Luca Sangiuliano

1 Introduction. 41
2 Problem Definition 42
3 Metamaterials Design 44
4 Experimental Setup and Procedure. 45
5 Experiment Results 47
6 Conclusion 51
References. 52

**Requirement Definition for a Vibration Source Using Transfer
Path Analysis and Solution Spaces** 53
Duo Xu, Michael Häußler und Markus Zimmermann

1 Introduction. 54
2 Methods. 55
3 Quantities for Target Setting 58
4 Issues in Real Applications 60
5 Requirement Definition on Power. 65
6 Summary 66
References. 68

NVH-Optimal Design of Electric Drive Units Using a Digital Twin 69
Mehdi Mehrgou, Bernhard Graf, Karl Knaus, Josef
Gojo und Daniel Schecker

1 Introduction. 70
2 Subjective Driving Assessment and Tonality Evaluation 72
3 Determining Reliable NVH-Targets and Target Cascading 75
4 NVH Development Methodology 79
5 Examples of Solutions at Different Steps of the Development
Process and Their Validation. 85
6 Conclusions. 86
References. 87

**Interior Noise Optimization of Powertrain Induced Vibrations
for an Electric Vehicle Using Machine Learning Methods** 88
Uwe Fiedler, René Visser und Volker Kreissig

1 Introduction. 89
2 Formulation of the Vibro-Acoustic Problem. 89
3 Numerical Approach 91
4 Baseline Status 94
5 Optimization of Acoustic Response 96
6 Autonomous Computational Experiments 97
7 Results of the Practical Example 100
8 Summary 104
References. 104

Inhaltsverzeichnis	XI
The State of Aeroacoustics Modelling: Challenges and Trends	105
Viswesh Sujjur Balaramraja, Athanasios Poulos und Yves Detandt	
1 Industrial Aeroacoustic Context	105
2 Direct Methods	106
3 Hybrid Approaches	107
4 Conclusions.	112
References.	113
Evaluation of the PVB Interlayer Type on the Interior Noise Level Using a Finite Element Approach	114
Dan Hodder, Mike Johnson, Pol D’Haene und Viswesh Sujjur Balaramraja	
1 Introduction.	115
2 General Background: Sound Insulation by Laminated Glass.	116
3 Aero-Acoustical Simulations	120
4 CFD Simulation	122
5 SNGR Model Based Acoustical Source Generation.	124
6 Acoustic Wave Propagation into the Vehicle	125
7 Conclusions.	132
References.	132
Novel Sound Imaging Method for the Localization of Leakages in Automotive Components and Structures	134
Thomas Rittenschober und Rafael Karrer	
1 Introduction.	134
2 State of the Art	135
3 Sensor Concept	136
4 Acoustic Image Computation	141
5 Applications	146
6 Summary/Conclusions	148
References.	148
New Lexus RX Acoustic Package Development for Carbon Neutrality	149
Hidenori Morita, Masashi Komada und Hiroyuki Kurihara	
1 New Lexus RX Concept and Carbon Neutrality of Acoustic Package	149
2 Acoustic Package Development for Quietness and CO ₂ Reduction.	151
3 Future Vision for Further Use of Recycle Material.	157
4 Conclusion	160
References.	161
Development of Quietness for New Nissan BEV Platform	162
Kazuhisa Okada und Toshio Enomoto	
1 Background.	162
2 Summary of New Nissan BEV Platform	162
3 Distinctive Value of Quietness for BEV	163
4 How to Realize Quietness of Road Noise and Motor Noise.	164

5 Technology for New Nissan BEV Model 164

6 Isolation Technology to Realize Attractive Roominess ~Isolation
System of HVAC COVER 170

7 Realized Vehicle Quietness at Key Scene 173

8 Conclusion 175

References 176

**Automated Squeak & Rattle Detection for Quality Assurance at
Production 177**

Alexander Roy, Jan Baumann und Jürgen Ochs

1 History 177

2 Motivation and Target 178

3 Requirements 179

4 Approach 180

5 Evaluation 185

6 Summary and Outlook 188

References 189

**Development of Sound Insulation Index for Interior Trim using
Panel Contribution Analysis 190**

Kichang Jo und Jinung Jang

1 Introduction 190

2 Panel Contribution Analysis 191

3 Sound insulation index 197

4 Conclusion 201

References 201

**NVH Simulator – Advantages and Ways of Experiencing the
New Age of Prototyping 202**

Marius Dute, Jens Viehöfer und Bernd Philippen

1 Motivation 203

2 NVH Simulator 203

3 Simulator Variants 206

4 Application Examples 208

5 Conclusion & Summary 211

References 211

**Metamaterials for low frequency tonal (tyre) noise mitigation
in vehicles 212**

Felipe Alves Pires, Luca Sangiuliano, Björn Reff, Jacopo Palandri,
Friedrich Wolf-Monheim, Bert Pluymers, Elke Deckers, Wim
Desmet und Claus Claeys

1 Introduction 212

2 Problem definition 213

3 Experimental results 220

4 Conclusions 222

References 222

Inhaltsverzeichnis	XIII
NVH trim components integrating particle dampers: damping, absorption and insulation all in one part	224
Francisco Sánchez Climent, Claudio Bertolini und Sylvain Simonnin	
1 Introduction.	225
2 General Overview of the Design of Particle Dampers for Integration into Sound Package Parts	226
3 Characterization of Acoustic Performance of Particle Dampers in ‘Artis3’	229
4 In-Vehicle Application	244
5 Conclusions and Outlook	250
References.	251
Defining Interior Noise Targets for EV Whines that Occur in the Presence of Road and Wind Noise.	252
Mark Burnett	
1 Introduction.	253
2 Method	256
3 Results.	259
4 Conclusions.	262
References.	262
The positive Network Effect on NVH Testing—A case study for electric motors	263
Dejan Arsic, Maximilian Miltenberger und Stefan Sentpali	
1 Introduction.	263
2 E-NVH Testing	264
3 Integration of a NVH-Network into E-Motor Development.	268
4 Conclusion and Outlook	271
References.	272
Develoment of Wheel Arch Liner for EV Application	273
Joshi Manasi P, Jain Sachin Kumar, Kamble Prashant P und N. H. Walke	
1 Introduction.	273
2 Test Methodology	275
3 Prediction of Sound Absorption of Materials for Design Solution.	276
4 Test Results and Discussion	279
5 Summary and Conclusion.	284
